Try resetting the radio - if THAT doesn't work, you might try finding
where the lithium cell is at (the battery that holds all the channel
information in the CPU) and removing it for a few minutes - this may
reset the CPU and let the radio operate correctly again...

FT221, FT221R and one 4 pin microphone FA.

Ebay items 1214276247, 1214277760, 1214661117. Get all three and you might be able to get one good 2 meter all mode out of the deal if you like to repair radios.

These were given to me as equipment to maintain our local DX packet alert system but they just don't qualify. The cash I raise will be donated to this group.

I have recently acquired a Realistic Pro-2045, I bought it from a friend just to see what it was all about. My problem is that I can't get the radio to scan below 66 mhz, I have looked up the specifications from their website and it confirms that I should be able to go from 29 mhz, can anyone please help me. I am very new to this and can't figure out why it won't work, I have tried to reset the radio but it just clears the memory and leaves me with the same problem.

Any help will be much appreciated.

Thanks

I have an ICOM IC-2SAT, the tiny radio with full power capability. Includes AC charger and manuals, like new.. $125 shipping included.

Also have a Kenwood TM-2530A mobile unit.. Works great, but I have had to replace the audio output IC with a circuit of my own, as I did not have access the the proper component. $100 shipping included.

Shipping outside the US becomes buyer's responsibility.

Well said, Darren. My personal interests are technical, CW and QRP. That is what makes me a ham today, but who knows, my interests could change tomorrow. What makes the Amateur Radio Service GREAT is that we all are permitted to participate in our own way, but somehow, as a group, we meet the goals of the Service.

Gotta love it!

The first digit of the serial number is the year of
manufacture -- "6"
means 1996. The second character is the month of
manufacture starting
with "C" for January, then "D" for February, "E" for March,
etc. -- "M"
is November.

I don't think HAM requires us to be upstanding citizens, just that we are
available for emergencies
and might possibly add a little international good will.
I suggest all upstanding citizens get in the slow lane and get out of my way
or I'll run you into a ditch
on the freeway. :)

Saturday afternoon, I'm going to list an MFJ station on eBay. 20 meter SSB / CW 9420 with a dipole antenna, microphone, power cord and a 971 antenna tuner. This is what they call the "travel radio". It is new, in the boxes. I bought it and was preparing to set up a station with it but couldn't pass the 5 wpm code, so the HF rig was never set up. My shack was to run on a deep cycle battery and solar cell. This unit is supposed to only draw about 3 amps. It will be a normal 7 day auction. JJ

2248. FS: TenTec Omni D w/PS and AT

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-15 03:59:00 UTC
From: pauldjordan@home.com
Message-ID: <96fk64vil1@news.netmar.com>
Source record: 64474

Hello all,

I have for sale an older model TenTec Omni D. It's the "C" model. I also have a matching 20 amp power supply and an R.L. Drake MN-4 antenna tuner.

The radio was last used by me when I was stationed in Fairbanks, AK. I used it with the power supply and tuner and a G5RV antenna and worked all over Europe with the 100 watts of the radio. Always recieved excellent audio reports. The radioa and PS are a 9.5 out of 10, the Tuner is an 8 out of 10 due to a little bit of surface scratches on the case, and the microphone has seen much better days. It all works great though.

The reason I'm selling this setup is because I've since replaced it with mobile radios that are smaller and fit in my trucks a lot easier. I actually bought a Kenwood TS-130 and an AT-130 planning to use that in my truck and realized it was too large as well so I use it at home now.

I'm asking $450 plus shipping for the whole setup. I may consider trades on dual band HT's if you have something to offer.

Let me know what you have.

It probably would be worth while for residents of other states to check to see if
similar legislation is being considered by their state legislatures as well.

The "UK" version if the PRO-2045 receives 66-88Mhz rather than the
29-54Mhz on the US version.

You will find the same pattern on many Tandy and Uniden models that have
been marketed in the UK/Europe and the USA.

Source record: 64489

Selling off part of my British Eddystone receiver collection

All these radios are in Fed Osterman's book, or can be seen at the Eddystone website:
http://www.qsl.net/eddystone/welcome.html

THE RAREST!!!
Model 880/2 22 tube receiver built along same operational design lines as 51J series Collins (30 1-MHz wide bands within which you tune around).But better as it has panel mounted speaker and factory USB/LSB detection. All original except kilocycle tuning knob. Covers 500 khz-30.5 MHz Working, rackmounted unit $1500 + shipping

Model 830 13-tube tube radio with wide tuning dial. SSB detrection. 300 khZ 30 Mhz. Works fine. Rare unit $750 + shipping

Model 1837/1s Also called the MARCONI MARINE "PACIFIC" This is a solid-state unit that worked fine, but is now "locked up" (display shows all "9"s),. The lockup was repaired once before, but the radio shop that did repair is long gone. Complete, but sold AS-IS. $650 + shipping

Model 750 11 tube radio that covers 480 kHz to 30 MHz. Big slide rule dial with bandspread too. Dial string of off one pulley (I cannot see well enough, and my fingers are too stubby to put it back on track), but radio works fine. The rackmount "ears" shown in Fred Osterma's book are not included, use it as a table radio. $700 + shipping

Model EC-958 (Grey front panel) a superb solidstate radio manfactured by Eddystone, but sold by other companies with their own names on them (Debeg, etc). Working condition. Very good on VLF Covers 10 kHz to 30.1 MHz $800 + shipping

Located in Southern NY state.. Shipping extra. Overseas OK but payment must be by bank wire transfer.

Hi folks:

All of Michigan's do gooder's want the HAM's to go away as well as the CELL TOWERS. It seems that all the $100,000 and up real estate values are devalued by the existence of "unsightly" antenna's. The cell tower debate is still going on.

This is not only fueled by the real estate owners. It is also fueled by the cable companies. they don't want their signals degraded by us amateurs.

Case in point. I wanted to build a ground mounted vertical. When I piped 100 watts through it, my neighbor could hear my audio. I know it is not necessarily my fault, however, I went ahead and called the cable company to check it out.

The first thing out of the tech's mouth was that I must be "pumping a lot of power through it" (all of 100 watts). The second and most critical thing he said was "I hope he has authorization from the township for the tower!". What tower? Why authorization? In any case, it turned out that the cable runs on the edge of the lot and my ground plane was just over it. Common Mode strikes again.

I made a dipole and that settled it.

The whole point is that these kinds of "regulations" are going to pop up and that the entire Amateur community will be blindsided because they believe they are safe in the FCC regs. States Rights issues exist here. States and Counties have to listen to their constituents as well. The amateur community in Texas will have to maintain vigilance against these unconstitutional items if it wants to keep this kind of regulation from happening. Money talks and property values are king it seems in this day and age. PRB or no, it will come down to vigilance.

You don't know what you've been missing. There are two types of Americans, Texans and those who wish they were Texans.

HT 1148 is being ammended to exclude licensed amateur radio operators.

TO: ALL TEXAS ARRL MEMBERS
FROM: JIM HAYNIE, W5JBP, PRESIDENT, ARRL

RE: TEXAS BILL H.B. 1148

There has been much concern recently about the potential impact of H.B. 1148, introduced in the Texas State Legislature by Representative Robert "Robbie" Cook (28th District). Hundreds of ARRL members have contacted me urging ARRL involvement in protecting the interests of Amateur Radio operators in the state.

Here's the issue: Many Amateur Radio operators fear that this bill, if enacted, could inadvertently impose some very difficult bureaucratic requirements on any attempt to erect even the smallest whip antenna.

I have spoken with Representative Cook's office and that was not his intention. The bill was supposed to deal only with commercial structures. When informed of the concerns of ham operators, Representative Cook's office invited an amendment to ensure that ham operators would not be affected.

I have sent the following amendment to Representative Cook's office and they are willing to put it into the bill:

Sec. 240.082.5 EXCLUSIONS: Nothing herein shall be construed to regulate, nor shall it regulate, antennas, antenna support structures, devices or facilities, installed, maintained and used exclusively for Amateur Radio communications by Amateur Radio operators licensed by the Federal Communications Commission.

Rather than continuing to alert me about this bill, Amateur Radio operators in Texas may wish to contact Representative Cook at the State Capitol to indicate their support of this amendment.

The only way that your signal can get into the cable system
is if the cable system is leaking.

If the cable system is leaking, it means that they are
radiating RF power into the environment.

If they are radiating RF power into the environment, it
means that they are broadcasting.

No cable company has a license to broadcast an RF signal
from their cable system.

Threaten to call the FCC and report an illegal broadcaster
in your area. Problem solved.

It worked for me.

It's time we stopped being pushed around by sloppy cable
companies when the fault is their own.

Anyone with an interest in amateur radio that moves into a
housing development deserves the grief they receive from
their neighbors. Buy a house out in the sticks and eliminate
the problem - for a while, anyway.

The 430 is a good, reliable rig, Nathan; you should be happy with it.

On SSB, the MIC(rophone) GAIN control is used to adjust your power.
On CW and AM, the CAR(rier) control adjusts your power.
On FM you have no control over your output power.

Hope this helps.

2268. PR:Log Windows sales for FY-2000 exceed that of AEA's in 1994, equal to 1995 sales

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-15 15:29:39 UTC
From: Rick Ruhl <ricker@cssincorp.com>
Message-ID: <dzSi6.1831$466.119334@news1.atl>
Source record: 64494

CSS revives Log Windows from defeat and sees increase in TNC software sales.

Muscle Shoals, Alabama. February 14, 2001: Creative Services Software announced that FY 2000 sales of the Log Windows logging program exceeded the number of units sold by AEA in 1994 and equaled the number of units sold by AEA in 1995.

"This proves that there is still a market, abet a smaller one than other markets, for Ham Radio Software.", said Rick Ruhl, W4PC, President of Creative Services Software. "Many consider 1995 the year the Internet had a big influence on Amateur radio, and I think our 2000 sales show that many who went to the Internet have join the ranks of the Log Windows owners, due to our Internet enabling of the program."

CSS also reported that sales of its TNC products, Pacterm '98 and PkTerm '99 Preview 1.5, have seen increases since the addition of the PSK-31 mode. This enhancement allows use of the TNC to key the radio in PSK-31 mode, saving the ham a serial port, and having to change between programs to change the different modes.

The Log Windows product retails for $69.95 and upgrades from release 3.06.15 or earlier is $40.00.
Those who have purchased version 3.06.50 or greater will get this upgrade free. Pacterm '98 and PKTerm '99 retail for $79.95 and all products include free in-version up grades. They are available from dealers around the world, as well as direct from CSS.

Log Windows is owned by SCO, Inc and is maintained by Creative Services Software.

Creative Services Software is at http://www.cssincorp.com
The Log Windows homepage is at http://www.logwindows.com

Windows, Windows 95, Windows 98 Windows Me , Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

My VX-5R Serial# 8L010775 doesn't stop scanning. I have several memories programmed with local police frequencies using the 107.2 CTCSS tone. When not scanning, all memories work fine, however, when scanning, no signals are detected. Does anyone know if that's a known bug? (Another unit programmed the same way works fine) Is there a software fix for it?

Anyone encountered front panel key-stuttering on a Kenwood TS-440s?

Pressing most of the buttons, such as band change or VFO/M, causes several button presses in about 1/2 second. For example, pressing band-up may jump from 40 meters to 15 meters.

HELP! Thanks for any ideas.

That's not 100% true - there are licensed Part 78 microwave
links which do in fact transmit cable signals to and from wired
cable systems.

The proper approach is that they are exceeding the maximum
signal leakage which is permitted by FCC Rules Part 76.

Yes, they are permitted to have signal leakage, albeit small
(50 uV/m at 30 feet) as long as it does not cause harmful
interference (which is a legal term of art).

>Threaten to call the FCC and report an illegal broadcaster
>in your area. Problem solved.

The FCC is very reactive on cable signal leakage (they have to
sample a given number each year and giving them a target with
known leakage is always appreciated), more so than on an unfounded
"unlicensed broadcaster" allegation.

Can someone out there tell me how to adjust my TX freq. offset on my IC-765.
It seems to be too low by about 120 Hz (i.e. my display shows 7.016 but my
TX freq is around 7.015.88) .I've got the calibrate knob on the top of the
rig to the minimum position and it's still too low.

Email is robertfa@microsoft.com

Thanks,
-rob N7QT

Well, I'm sneaking up on my Morse code practice, and in a few months, I'll probably have either my General, or possibly my Extra, depends on how long it takes for the Morse to sink in enough, because I can pass the General tests easily already, so I might as well study more. I don't know why, but its one of the hardest things I ever attempted to learn. My hat is off to those who picked it up easily, it hasn't been like that for me. But that's another story, I gotta stop whining (grin).

My question is what might be a good HF rig to start with? I'd like something reasonably modern, say 80-10 meters, and doesn't cost excessively. Around 100 watts is fine. What might I expect to pay for such a beast? Any opinions?

> amateurs.

In a properly constructed cable system, their signal won't be degraded at all. I have helped Cox cable repair an installation that was located right next to a repeater in a residential neighborhood. No RFI on channel 18.

> Case in point. I wanted to build a ground mounted vertical. When I
> piped 100 watts through it, my neighbor could hear my audio. I know it

> company to check it out.

> The first thing out of the tech's mouth was that I must be "pumping a
> lot of power through it" (all of 100 watts).

The tech was quite incorrect in his response. Before I get into the details, I will point out that the ARRL RFI Task Group (a combination of volunteers, Directors and HQ staff) is concerned about these types of problems. One of the members of the RFI Task Group is Ron Hranac, N0IVN. Ron is an active ham and is also on the Board of Directors of the Society of Cable Telecommunications Engineers. Ron is very well connected in the cable industry, naturally. If cable operators are having difficulty understanding their obligations, Ron has usually been able to contact their senior technical staff and help them understand why it is important that the cable company follow the rules. Those that are having a problem can send me a summary of their problem, their attempts to resolve it with the cable company and any contact info for the people they have worked with at the cable company, so Ron can tell the cable company just what needs to be addressed. I will forward it to Ron for action.

Now, as to the rules, the tech missed the boat. As a minimum, he is incorrect that this is caused by any problem at your station. This is case of fundamental overload, plain and simple. Now, it is not yet determined whether it is the cable that is leaking or the customer's TV, but somehow, an over-the-air signal is affecting that TV.

One of the biggest CATVI problems is leakage into channel 18 from 2 meter operation. Other cable channels can be affected by other ham bands. This is a true leakage problem because cable channel 18 (channel E) uses 144-150 MHz. Again, though, when it occurs, the leak could be in the cable or the cable-ready TV. Naturally, sometimes the cable company will blame the TV and the TV manufacturer will blame the cable company. There is a way to

determine which is which, though. Have the cable company demonstrate satisfactory performance using one of their set-top converters. In that case, the TV will be tuned to channel 2, 3 or 4, and the converter (presumably better shielded than the TV) will be tuned to channel 18. If there is still interference, the problem is likely in the cable. If the interference clears up, the problem is in the TV and the cable company is off the hook.

One common mistake made by cable operators is to believe that they are responsible for leakage OUT of their cable, but not responsible for leakage IN. This is incorrect. Part 76.605 fo the FCC rules specifies minimum performance standards. 76.605(a)(8)(i) stipulates that the cable company must maintain a minimum of 51 dB of video-carrier-to-coherent-disturbance ratio. In that context, our leakage into the cable is generally a "coherent distrurbance."

The situation on HF is actually usually not caused by a cable problem. As you characterized, it is a "common-mode" pickup. In this case, your transmitted HF signal cannot help but be picked up on the shield of the cable -- a great big longwire antenna system connected to the TV. Some TVs are immune to this common-mode pickup on the coax, but most are not. A common manifestation of this is that your transmitted signal gets into the TV audio, often independent of the volume control. There is an easy test for common-mode pickup. Disconnect the cable from the TV altogether. If you no longer affect the raster (much) and no longer get into the sound, simply touch the shield of the F connector on the cable to the shield of the antenna connector on the back of the TV, without screwing it on. If the transmitted signal now seriously affects the raster and/or sound, it is a common-mode problem, cured by a common-mode choke.

Rarely, a defect in the cable can create a common-mode problem, as a ground is missing or broken somewhere. This is usually manifest by also hearing a strong leak on or near 145.25 MHz.

If you do interfere with the TV when the cable is unplugged, may be having "direct pickup" of the transmitted signal. If you interfere with channel 18 when no set-top converter is used, but do not do so when the cable company hooks up a set-top converter, this is also a direct pickup problem. There is a slight chance that the set's AC line may be involved, so you can try a common-mode choke on the AC line. In very rare instances, you may need a "brute-force" ac line filter on the TV, either a Radio Shack catalog # 15-1111 or one of the filters sold by Industrial Communications Engineers (see http://www.arrl.org/tis/tisfind.html to look up their contact info).

To make a common-mode choke for thicker cables such as coax or ac-line cords, use a Palomar F-240-43 ferrite core. For the lower HF range, you may wnat to try -75 material instead. Wrap about 10 turns of the wire you are trying to filter onto the core. When some hams hear "ferrite," they may make a common mistake. Because "clamp on" split beads are easier to work with than toroids, may hams put a ferrite bead or two onto the wire they are trying to filter. This may work in some cases, but in most cases, some inductance is required to make a good choke for HF -- turns of wire are

required.

Under the rules, cable operators are NOT required to correct common-mode pickup problems. This is technically a problem in the TV itself. The laws of physics say that the outside of the cable will pick up nearby RF signals and conduct them to TVs. Many cable operators do help their customers with this, though, as a customer-service issue.

A few years back, I wrote a 3-part article on cable TVI. Instead of publishing it in QST, though, I published it in Communications Technology, the journal of the SCTE. I did this so that cable operators will have confidence in what it says. It takes the cable operator through the entire process of troubleshooting and repairing cable TVI, step by step. A copy of this article has been reprinted with permission in the ARRL RFI Book (http://www.arrl.org/catalog/6834). Making a photocopy for your cable opearator will be fair use, IMHO.

See also ARRL's RFI info at http://www.arrl.org/tis/info/rfigen.html.

That may be true, but the signal can get into the TV set by several
different ways not at all the legal responsibility of the cable system.

> If the cable system is leaking, it means that they are
> radiating RF power into the environment.

Probably so, but the level of signal that can cause interference to the
video carrier can be as little as -60 dB relative to the video carrier
level. The amount of leakage from the cable could be too small to hear.

> If they are radiating RF power into the environment, it
> means that they are broadcasting.

Perhaps so, but a "legal" cable TV leak on 146 MHz is 20 uV/m at 3 meters
distance from the source. This would be about S6 into a 2 M receiver with a
ground plane antenna located 3 meters from the leak. At 30 meters distance
from the source, a legal leak would be 2 uV/m, about S3.

> No cable company has a license to broadcast an RF signal
> from their cable system.

If their leakage is less than the allowed maximum limits, they can indeed
"broadcast" their signals, although if actual harmful interference results,
they must correct the leak even if it less than the maximum. Harmful
interference has a specific legal definition as:

"Any emission, radiation or induction that ... seriously degrades,
obstructs or repeatedly
inturrupts a radio communicaions service..."

> Threaten to call the FCC and report an illegal broadcaster
> in your area. Problem solved.

> It worked for me.

If there is a serious leak, the cable operator can usually be persuaded to
fix it, sometimes with, and sometimes without, the FCC. But do keep in mind
that some types of CATVI, especially from HF stations, is not caused by a
rules violation by the cable operator. Most do fix that sort of thing, but
it is a customer-service issue, not a compliance issue.

Mike:

Hang in there with the code, it's not easy for everybody. I was pretty well resigned to limiting my HF activity to 10 meters until they lowered the code speed requirmement. You should be able to pick up something solid state from the mid '80's for $300-600. Something like a Yeasu FT-757 or similar models from Kenwood or Icom. If you have more to spend, you can get more bells and whistles. If your budget is lower, you can get hybrid rigs with tube finals in the $250-400 range. If you like to play around with electronic gear, there are still some good quality all tube radios that haven't attained collectable status yet. I picked up a Drake TR4c with speaker, power supply, mic, and manuals for a friend last year for $200 at a hamfest. It even worked! You can also fine Heathkits like the HW-101 in the $100-200 range.

If there is a club in your area, join it and talk to the members.

Again, good luck with the code and 73

Are you saying that the cable system is carrying microwave signals? That is what I was referring to - the cable system, not some ancillary system that is irrelevant to this discussion. We are discussing RF ingress/egress as it pertains to the cable distribution system.

The intended result of my comments are to cause the problem to cease to exist.

The headend technicians that I have dialogued with are very interested in reducing the risk of the FCC casting a disparaging eye upon "their" cable systems.

My suggestion has worked multiple times and provides positive results for the radio amateur. The few times that I have communicated with the FCC concerning similar problems, the results have been less than satisfactory and not worth the effort. I'll take positive results over being "right" every time. I am too old to be a Boy Scout.

Is the transmit freq the same as receive? IE: the same error in comparison to the readout? I don't know anything about the 765, but I had to adjust my new 706's readout. Pretty much by adjusting the reference ocl.
Mine was off 70 cycles in the top of the HF spectrum. "The radios slew a bit so the error will generally shift and increase as you go up frequency". I tweaked my trimmers for that, "there are 3 on the 706, but I only needed to adjust one to do the trick". I'm tracking much better now. I don't have the high stabilty xtal, but is much better. It will vary on temp, but I just checked mine as I type on 15 mhz WWV and I'm only 6 cycles high in freq. Much better than 70. By the time I drop to 5 mhz, the error is even less. So it's pretty much spot on for gov use. I still get a little off way up high in the VHF/UHF area, but not much I can do about that unless I spring for the hi-stab xtal. I would think there should be info on this in the manual somewhere. Look to see if there is info on adjusting the rig after adding the hi-stab xtal. That is what you want to tweak. But, your rig may already have the xtal...Not sure.. You can't hardly tell 10 cycles on SSB so it doesn't have to be absolutaly perfect. Most radios never will be perfect on all bands. MK

> Thanks, Michael N9BDF

It's not too wide a range either one you go with. The tuner in those
radios is more of a trimmer or "line flattener" than an outright tuner.
That is they are good at tweaking in a high SWR that is not too high,
such as working 80m on a dipole and dropping way down in freq so the SWR
is 3:1. it will usually handle this ok. But it's not made to tune
antennas per say. If you need a wide range tuner to say tune a ladder
line fed dipole on all bands, you will need a tuner with a much wider
range, and better power handling abilty. The built in tuner is just a
"tweaker" to assure full output from the rig if the SWR rises a bit. MK

On the 746, you get to each band by pressing its assigned button on the keypad. That pops you to the last frequency you used on that band. If you press the button again, it takes you to the second-to-the-last frequency you used on that band. The third press gets you to the third-to-the-last freq. And the next press takes you back to the start - the last frequency you used.

The terminology is drawn from computer programming terminology, wherein the CPU maintains a "stack" on which it can keep a series of numbers, and it pops numbers on and off the stack as needed.

In this case, the stack can hold only three numbers (frequencies). If you go to another frequency other than the three that are on the stack, the oldest frequency gets pushed off the bottom of the stack, and the new one goes on the top of the stack.

I consider it a handy feature. It's not as useful as the more-permanent memory read/write stack the 746 (and I expect the 756) has, but it's a nice complement to that.

2292. Re: Help: IC-765 TX Freq Adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-15 22:51:19 UTC
From: Dick Hughes <rhughes33@cableone.net>
Message-ID: <u3no8tsqf77igsghrr0230rjfvq4pi04dc@4ax.com>
Source record: 64518

Here is a procedure for resetting the master oscillator on the IC-765.
I got it directly from Icom tech support in 1991.

1. Remove top cover and power supply.
2. Set frequency to 8.0 Mhz LSB.
3. Set J2, Pin 2 on PLL board to 3.0 VDC using cal control.
4. Pull J4 coax and attach frequency counter to jack.
5. Adjust L45 for 60.0 Mhz.
6. Cal Control should be at approx. 9 o'clock position.

Hope this helps.

>Are you saying that the cable system is carrying microwave
>signals?

Your post stated that cable systems are not licensed to broadcast signals. Reality is that cable systems can, and most multi-head-end systems do, hold Part 78 licenses to "pipe" signals to and from head-ends by terrestial microwave. So in fact they do hold FCC licenses to transmit signals in conjunction with the operation of their cable system. Most refer to them as "AML Relays".

And yes, a goodly number of cable channels arrive at head-ends by microwave, either terrestial or via satellite.

>That is what I was referring to - the cable system,
>not some ancillary system that is irrelevant to this
>discussion. We are discussing RF ingress/egress as it
>pertains to the cable distribution system.

If what you meant was "do not hold licenses to transmit signals on the frequencies leaking from the cable system", you are correct, but that's not what you said.

>> The FCC is very reactive on cable signal leakage (they have
>> to sample a given number each year and giving them a target
>> with known leakage is always appreciated), more so than on
>> an unfounded "unlicensed broadcaster" allegation.

>The headend technicians that I have dialogued with are very
>interested in reducing the risk of the FCC casting a
>disparaging eye upon "their" cable systems.

Most are...but some less enlightened ones whom I have dealt with professionally could care less or were very inept at keeping their systems in compliance.

>My suggestion has worked multiple times and provides
>positive results for the radio amateur. The few times that I
>have communicated with the FCC concerning similar problems,
>the results have been less than satisfactory and not worth
>the effort.

I never have problems getting the FCC field office folks to act on stuff that I bring to them. What's the obstacle?

> I'll take positive results over being "right" every time.

I never settle for anything less than both.

>I am too old to be a Boy Scout.

I'm never too old for that.

That should do the trick. I note the 706 also uses the same 60 mhz freq. But in my case I just used wwv. On the 706, if you are spot on, there will be no difference in the freq of the tone if you switch from am,usb,lsb. But you have to wait until wwv is actually sending a modulated tone to be able to tell this. You can't do it with the silent "ticking" carrier. Thats how I can tell that I'm exactly 6 hz off for instance. It's very precise being as I have a 1 hz readout. But you also need a good ear for tones too..:) Or use a counter, etc. My ear can tell if I'm more than 1-2 hz off if I jump back and forth. MK

Actually, what you need for telling this is the serial number. If the
first number pair is 43, it's 136 - 174, if 44, it's in the 470 range.

And if the cable residential tech gives you a hassle, just call his
office and tell them you're about to call the FCC about it. If that
doesn't get it done, DO go ahead and call the FCC district office and
give them the particulars. Then when the tech shows up again, tell him.
I'd bet he won't be back without his hat in hand and a crew to work over
the cable system. That's what happened go a friend of mine.
One of thelast things the cable co wants is a hassle from the FCC over
leakage from their system.

Subject: ALERT re: Texas Bill H.B. 1148
X-Mailer: <IMail v6.00>

ALERT - FROM jhaynie@arrl.org via arrl-mailer@jupiter.interbridge.net

TO: ALL TEXAS ARRL MEMBERS
FROM: JIM HAYNIE, W5JBP, PRESIDENT, ARRL

RE: TEXAS BILL H.B. 1148

There has been much concern recently about the potential impact of H.B. 1148, introduced in the Texas State Legislature by Representative Robert "Robbie" Cook (28th District). Hundreds of ARRL members have contacted me urging ARRL involvement in protecting the interests of Amateur Radio operators in the state.

Here's the issue: Many Amateur Radio operators fear that this bill, if enacted, could inadvertently impose some very difficult bureaucratic requirements on any attempt to erect even the smallest whip antenna.

I have spoken with Representative Cook's office and that was not his intention. The bill was supposed to deal only with commercial structures. When informed of the concerns of ham operators, Representative Cook's office invited an amendment to ensure that ham operators would not be affected.

I have sent the following amendment to Representative Cook's office and they are willing to put it into the bill:

Sec. 240.082.5 EXCLUSIONS: Nothing herein shall be construed to regulate, nor shall it regulate, antennas, antenna support structures, devices or facilities, installed, maintained and used exclusively for Amateur Radio communications by Amateur Radio operators licensed by the Federal Communications Commission.

Rather than continuing to alert me about this bill, Amateur Radio operators in Texas may wish to contact Representative Cook at the State Capitol to indicate their support of this amendment.

2304. Texas Antenna Bill, H.B 1492

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-16 02:36:39 UTC

Source record: 64533

My cherised 1978 vintage FT101E has quite operation on ten meters my favorite band. Does anyone have an idea of where to look ?

Symptoms ; everything works receive and transmit 160 thru 15 meters but on ten meters transmit is way down at about 10 watts. Ten receive seems to be fine.

The rig had been stored for years and at first everything seemed fine, then over a few days there went ten. I've tried new tubes, no difference.

Ideas anyone ?

thanks

Peter

group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by | Reach Electronics. Reach sells tone & voice pagers, Alert | monitors, and ENCODERS. They also do contract | manufacturing.

Reach Electronics |
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by |
Federal Signal and sold by Brinkley Electronics: |

Brinkley Electronics |
P.O. Box 502 |
Wallburg, NC 27373 |
(336)769-2902 |
FAX: (336)769-4029 |
email: sales@brinkleyelectronics.com |
web page: http://www.brinkleyelectronics.com |

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Nevada is going the other way. Assembly Bill 61
http://www.leg.state.nv.us/71st/reports/history.cfm?ID=3508
requires that governments *and* private CC&Rs must reasonably allow amateur
antennas. The bill was introduced by Assembly Member Bob Beers WB7EHN.

Howdy. Just got an old Heathkit SG-8 to help me with my homebrew stuff. Recapped the electrolytics, adn fired her up. Fairly accurate, compared to my receiver (Rat shack DX-398) for BC band. Looses it prety bad from there on. There doesn't seem to be a way to calibrate this thing.... I would like to use it for 40-10 meter projects....
Ideas?

Come on, Phil. We're discussing leakage from the cable system and possible ingress of amateur radio signals into said system. We're not discussing "broadcast licenses" that are unrelated to the topic at hand. I don't know how to make this point any clearer than has been previously stated.

> >The headend technicians that I have dialogued with are

It is true that there is no single magic bullet/pill that cures all things in every situation, but my method has a proven track record. Undoubtedly, there will be exceptions to the rule - eventually.

> I never have problems getting the FCC field office folks
to act

The obstacles are a lack of proper funding, insufficient FCC personnel for the tasks at hand, etc.

I don't think there is a SSB "power outout" adjustment on that radio.
Like one said, about all you can do is reduce the mike gain. If you
needed to reduce power to run an amp with a low drive requirement, say
25 w or whatever in the case of ceramic tubes etc, I'd be real careful.
It will be hard to accuratly read peak power with the average watt
meter. You could get it set to appx 25 watts average power, but if say
you talked overly loud into the mike, you could still have a pretty high
power peak. Not good for the low drive amps. I'd prefer to run full
power and use a swamping resister I think. That way, you know even if
the dog bites your leg, and you scream into the mike, you won't blow
your tubes...g But if you just want to reduce power just to reduce
power, it would be no problem. I don't think the 440 had a power
adjustment either. MK

Hi:

Are you into fixing HT600's, P200's MTX Series of radios?

If so, this is a must item. Allows the Battery to be connected
to the Bottom of the radio (With the main housing removed) , and
allows testing of the mother PC board for trouble shooting.

Picture can be seen @

Anyone making digital scanners? All the cops around MI are going 800MHz digital. It used to be nice to be able to listen to the cops talking about road and wx conditions, and learn where traffic back ups were--thereby avoiding them--but no more. Now everything is all "secret" and all the scanners are obsolete--unless you want to know where the local septic pumper is headed with another load of lollypops! Most of the volunteer fire departments are upset with the move also.

Early VX-5R radios had very slow reaction to tone squelched memory channels.
Mine seems to work fine IF I set the receive power saver setting to OFF,
otherwise the radio may be asleep when traffic is on the freq and the the
tone squelch causes that memory to skip because it is slow. Try setting
your receiver power saver (menu number 14) to off when interested in
receiving tone squelched channels. Do you really need the tone on the
police freqs?

I have a 9.6v 900mha NiMH Periphex pack (Advanced Battery) that is over 2 years old and starting to fade. I got my $ out of it. They are 1000mhz now. My 600mha 9.6v NiCd original Yaesu pack died a long time ago. I also have 2 NiMH Perihex 7.2v 1800mha packs 2 years + old and they work good. All fit in the original soft vinyl case or the cordure beltclip case just fine. I do NOT fast charge these and generally run them down all the way before charging.

2325. Re: Butternut HF6V-X 80-10 METER VERT. HELP???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-16 17:01:29 UTC
From: John <nospam63116@yahoo.com>
Message-ID: <J1dj6.1784$TD1.158247@bgtnsc05-news.ops.worldnet.att.net>
Source record: 64401

When I decided to install some buried radials for my HF6V-DX, I had to move the antenna, and ended up just using laying about 30 feet of standard RG-8 to the terminals on the bottom of the mast instead of the manufactures supplied feedline. Afterward, I had to re-adjust settings on my antenna tuner, but that was about it - the antenna still worked fine for all my regular contacts and my occasional DX hunt...

I've had mine ground mounted (over 35 buried radials - (4 each band) 1/4 wave lengths 10, 15, 20, 40, 80 mtrs in a wagon wheel spoke pattern) for over 10 years now - best money I ever spent on an antenna. And the effort of laying down permanent underground radials was well worth it too (which I'm reminded of every time I go to cut the grass in the summertime :) Eventually, I'll change out the radials as they decay, probably another 5 years or so...

Short of the HF6V being destroyed in a storm or something (unlikely since it's ground mounted and guyed), I don't see ever replacing it - it does a great job.

2326. Sell Original IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-16 17:35:29 UTC
From: witmerjr@aol.com
Message-ID: <20010216123529.05735.00002474@ng-md1.aol.com>
Source record: 64402

This original Icom 706 transceiver has performed very well over the last 2 years - used by me strictly as a back-up base unit for 6, 10 and 2 Meter Operation. Previous owner did use it mobile - there are some scratches on the sides where it was bolted to a mobile mount along with "Velcro" patches on bottom.

Includes like new 12 VDC power cord, original hand held mic, manual, original factory accessory interface cable and factory box.

$500 plus shipping from 19446.

Bob W3RW

Those are the FCC's self-generated problems (don't get me
started!!). What are YOUR problems in getting them to act on
items that are on their "to do" list?

With me, it's one phone call, and poof....it's being done.

As far as "tasks at hand", cable system leakage surveys are
definitely in the "Column A" list.

Hello all.
I have a near mint condition 940SAT for sale in the Detroit area. Unit has a minor scuff on the top and the display light has an occasional problem of remaining unlit when the rig is first turned on after some inactivity (pops on when you toggle the 'dim' button) but otherwise looks and works perfect. I'm moving to a more antenna restrictive apartment so I need to sell my baby. Comes with the power cord and manual. No box or microphone. $1000 OBO. If shipping outside of the Detroit area, I will need some help with shipping costs.
Will also consider trade for an IC-706MkIIG or FT-100
Please email with questions or if you would like to see a photo.

Hi:

Have you been looking for that 32 channel ROM?

I have a number of the 32 Channel Eproms that
will fit all of the Motorola Maxtrac Logic Boards.

These are great for those who experiment with
this group of radios.

Note: This requires a little more than just removing the
Old Rom, but if you are familure with these boards, this
Eprom is Required to make them work.

$16.50ea+ Shipping

Buy 5 or more, I will cover shipping costs

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If
immediate shipping is desired) or a Personal / Business check is A-OK too if
you do not mind a Short Shipping Delay due to bank processing time. This is
required only the first time or two as once you are in the data base,
PrePayment is no longer required

Only because The Congress directed them to do it in the Telecomm
Act of 1996. The Commish' certainly wasn't about to do it on
its own.

That matter was at one time headed to court as a major pizzin
contest between the broadcast and satellite delivery interests
on one hand and the real estate developers groups and the
League of Cities on the other hand. The issue is a Federal
constitutional ban on impairment of private contracts (Article
I Section 10 as interpreted by the U S Supreme Court in the
case of _Shelley v Kraemer_). AFAIK it's cooled off - for the
moment.

As I said, the states can get into CC&R regulation because CC&Rs
are a STATE creation - in California they are regulated by the
Planned Unit Development provisions of the Civil Code - and in
most states there are no constitutional bans on interference
with private contracts as there is in the U S Constitution.

Get a frequency counter to use with the old signal generator. Been
there and done that about 20 years ago. Also you could look at the
hamfests and see if you can find a HP signal generator. Those big old
tube units are going for under $ 50 or should be if you can find one.

Hi All,

Does anyone out there have the instruction sheet to their Kenwood PS-52
power supply ??? If you do, would you be kind enough to scan it and E-mail it
to me ??? Thanks in advance.
****
Ron Goldstein.....KA2IIA

A preliminary test (not a lab test, but the guy had the rig for several hours) is in the Feb. 2001 CQ magazine.

He really liked the rig.

I talked to a guy running one the other day on 10m. It sounded pretty
good. He was at the kenwood club station in CA. MK

All Mirage, RF Concepts and probably other amps for 2 meters will not pass 440 or other freqs because even when they are turned on bypass, there is a helical 2 meter filter in the circuit. You have to take the amp completely out of the circuit to work. You have to use 2 diplexers. One to separate 2 from 440, then put your amp in line, then combine on other end to go to dual band antenna. If you have a FT8000 or 8100, you can remove a pin to disable the internal diplexer and then you'll need only one to combine before going to the antenna.

I hace an Optoelectronics R10 Interceptor FM Communications Interceptor (30-2000MHz) The unit has marginal batteries and no antenna. I got it from a friend in trade and I cannot get it to work right. Unit is sold AS IS. Opto states they can repair it, but I figure i'd just sell and let some techie fix or send it out, asking $75 shipped conus. Photos upon request

Source record: 64352

Hi Steve (and anyone interested) - okay, here's a rather detailed description of what I did...

You could use a hose clamp, but I'd be worried about conductivity problems over time - you'd have a difficult time ensuring that all of the ends of the wires had a good connection to the mast season after season...

What I did (more work, but permanent, and I have excellent electrical conductivity) was cut 4 (or more), 1/4 wave radials for each band you want to work (10, 15, 20, 40, 80 mtrs), about 20 in all. Take one radial for each band and crimp them together with a crimp terminal (lugs and the tool can be gotten at a home improvement store or Radio Shack). Personally, I also solder the wires and lug together, but that's just me - it's probably not really necessary :)

Attach the 4 different lugs (with the group of radial wires) to the grounding screw terminal on the bottom of the HFxV (I had to buy a longer screw - get one that won't rust), and lay the wires out in the pattern across the yard that in which you're going to bury them (wagon wheel spoke pattern - i.e., one wire for each band runs north, south, east and west fanning out from the base of the antenna).

Open a trench for each wire, bury it, pat the sod back down over the wire, and you're done for a few years (until it's time to lay down fresh wires - about 4 to 6 years depending on the soil in your area). In a week or two you won't even be able to see the trench's...Each wire should be laid in it's own trench, not all bunched together...

So far I've put down 2 sets of radials, so I've got somewhere in the area of 40 or 50 radials out in the yard - about 8 radials per band. This spring I'll probably lay down another set (for the heck of it) so they're be about 12 radials per band. It only takes a few hours to do, so it's no big deal. My biggest problem was the 80 mtr radials - I had to zig zag them around to make them fit within the confines of my yard, but they still work fine...

Hope this helps... Any other questions, just let me know...

2378. ???HF Remote Base Controller Recomendations???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-17 17:29:48 UTC
From: "Thomas M. Alldread" <tma@mail.island.net>
Message-ID: <08dt8t80lbamd4qje9sjcg8en84e0q6egt@4ax.com>
Source record: 64359

Greetings to All on this Group:

A group of us have just started to look at setting up a 440MHz repeater as the nucleus for an HF remote base system. Ultimately we want to link this system to a 2M repeater to provide VHF access to the HF remote base as well. We currently have a couple of modern ICOM HF rigs within the group to choose from that we would like to use for the remote base rig. It has been already decided to use Motorola equipment for the UHF repeater and full duplex link equipment with commercial antennas and duplexers.

We have not decided on the controller equipment to use. I would like to hear recommendations from those that have experience with setting up a similar HF remote base system. We basically would like to be able to remotely DTMF control all the serial port controllable features of the HF rig, to remotely select antennas, to remotely control at least one antenna rotator and to be able to keep tabs on the status of the site. Digitally generated voice confirmation for all the remote commands would be needed for feedback to the operator.

Although I have done some Internet searches I have not yet recognized an off-the-shelf controller package that will do the whole job. A friend of mine set up a similar remote base about a decade ago that used a Commodore 64 with a custom interface that does pretty well everything we need but I am wondering if there is a more modern alternative. Are there modern embedded controller systems available for this application or alternatively a PC software package possibly using a pair of sound cards for audio interfaces available off-the-shelf? I guess basically I would like to identify all currently available modern controller equipment packages that are designed to do the job and hear recommendations plus pros and cons from those that are experienced with HF remote bases.

Thanks in advance for all your help!

73 & Enjoy!
Tom, VA7TA

Very Best Regards,
Thomas M. Alldread, tma@mail.island.net

Guys:
I e-mailed Yaesu on a part request over the holidays, and never got a return e-mail or a bounce, but when I called mid-January, I was told that my e-mail was incorrect, and the fellow I talked to sent it out and I got it three days later. Clearly it was my fault that I had an old e-mail, but once I connected up with them, I got great service for my old 747. Thank you Yaesu!!!

Pick up one of the HP 5328A's that are going for abt $125 on Ebay. Make sure it has the high stability timebase and you have an excellent counter good to 500 mhz. Much more accurate than anything you mentioned.

For under $ 400 you should be looking at a used service monitor. They sometimes show up on ebay and hamfests.. I bought a used Singer for about $ 200 a few years back. While It won't count the frequency you can set the dials to the frequency desired and there is a zero center meter you can watch to see how far off you are from where the dials are set. The sensitivity is also much beter than a counter. It will be accurate at around 2 microvolts where the counteres need about 20 milivolts or more. There are some counters made by Optoelectronics for around $ 100 and as long as you keep them at a reasonable temperature they seem to be stabel and accurate enough for most work. Lots of used comercial counters are out that should be in the under $ 100 price range also.

This is a multiple CD set of vintage rig owners manuals, service and repair info, schematics and more that I have compiled over the years ! There are literally hundreds of rigs covered on these CD's. All are printable using a simple graphics viewing program and Adobe Acrobat Reader. Manufaturers included are: Alinco, Alliance, Alpha, Ameco, Ameritron, Amp Supply, Antenna Mart, Astatic, Astron, Autek, B&K, B&W, Babcock, Breting, CDE, Central Electronics, Clarostat, Collins, Conar, Dentron, Dowkey, Dragon, Drake, Eddystone, Eico, Eldico, Elmac, Electro Voice, Geloso, Gonset, General Radio, Gross, Hallicrafters, Hammerlund, Harvey Wells, Heathkit, Henry, Hickok, Hewlett Packard, HyGain, Icom, James, Johnson, Kenwood, Knight Kit, Lafayette, Lysco, Maxon, Midland, Motorola, Standard, Telcraft, Tmc, Triplett, VEB, Waters, Weston, World Radio Labs, Yaesu, CB Radios, and more. Hundreds sold in the past. Being updated weekly now. No hams shack is complete without this CD set of vintage manuals ! There is also a list of mods included for vaious rigs, scanners, cb's and whatnot. Buyer agrees to prepay and cover shipping. Email me if interested.

Looking for an old, crystal-type Robyn scanner, model "Robyn 3-bander"in
non-working condition for parts only.It is the one with the 16 tiny red
incandescent channel indicator lights and the 3 colored "band" lights.Needed
for parts only so need not work but should be electronically complete.
Will buy yours outright or, have lots of scanner PARTS (both for xtal AND
programmable scanners) that might be arranged for a TRADE.
Please contact me DIRECTLY at KLARRG@AOL.COM if you have one to make
necessary arrangements.

Thank You ! Klarrg@aol.com (LarryW.)

I just bought a used AEA Pk-232mbx on ebay but there's not any software included in the deal. I'm not sure what software I should be looking for. I primarily want to use it on HF for Amtor and Pactor. Is there any free software I can download from the web for this TNC?

Thanks,
David, K4ZZR

Thanks for the information. I think I'll do it with the terminal lugs, that sounds good. I've got some radials laying on top of the ground now. When it gets nicer I'll add a few for each band and trench them in with a yard edger. I think that will work.

Thanks,

Steve

You can use any terminal program to run the PK 232. I use Procom to run mine.
But windows hyperterminal will work fine.
I hope that helps

That's what it is. I have a Standard C178a that is a monoband and If I have a dual band in there I can control the fox from the 440 side. I'm looking for a cheap worn unit. Maybe it needs a new battery and the owner doesn't want to spend $40-$50 for one when the radio is in need of a face lift. I don't mind, it will be ran off a 12v gel cell.

Check out http://thunt.org for our site.

Hi:

We have found some unique items for persons who service or
wish to upgrade your old radio to a 32 channel, 16 pin series
Maxtrac or Radius Mobile.

Will NOT WORK on GM300's !!, But will work Perfect on
M100's, M214's, M216's, Maxtrac, Maxtrac 300's, Desktracks.
ect

Normal RSS is required !!, and all you have to do is save your old
Alighnment Data, removed the old or damgaed Logic Board,
install the New one, reinitilaize the radio, and you can now
have a 32 channel raido. Has the ver. 5.34 firmware. Comes
in a factory anti-static bag.

Detailed instructions availible

$135.00ea+8.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

Greetings...

I have 'just missed' several of the above radios at a real good price. If you have one of these to sell at a good price, please e-mail me! Desk mic would be a plus with whatever rig you have to sell. I might even consider an FT-847 or an Icom IC-746 for the right price. Also looking for an MFJ 989C tuner for a decent price. Nothing over $175 for the tuner, please. Will negotiate. Prefer a seller that will take PayPal.com for a good tuner (doesn't HAVE to be a 989C) that has coax 1 and coax 2 bypass...

Thanks, JS, for the vote of confidence, however I feel that I've given it my best shot. Actually, there are several of us old guys in the radio club that have been plugging away at code for a long time. Maybe 30 years ago we might have been able to do it.

I thought if I went out and spent the money for the radio equipment... I'd HAVE to keep on until success was mine. Well, now it's listed on eBay and maybe someone who can learn the code will be able to use it. Everybody talks about how easy it is, but you should talk to some of us that have been working on it for a couple of years... Hi Hi. It is definitely the most difficult thing I have ever tried to do. 73 JJ

Don't give up! Try different methods. There is one that will work.
Here are some examples from the old HAM FAQ file.

The methods we use to learn MORSE are varied. Here are some
different methods so instructors & students can see, choose,
& try various ways as they practice, practice, practice. IF
YOU GET STUCK WITH ONE METHOD THAT DOESN'T WORK - JUST TRY
ANOTHER METHOD!

This is becoming an increasingly common question as many
"no-code" Technicians realize they can add more privileges to
their license if they learn Morse Code. The following list
of suggestions should be helpful in finding ways to approach
the effort.

Listen to code at a rate faster than you can copy.
Participate in Novice-Roundup and/or Field Day. Practice
whenever you get the chance! Avoid the "deciphering" plateau
around 5 WPM and and character plateau at 10 WPM by listening
to the fast Farnsworth-paced "beat" of each letter and the
"beat" of common words. (See the question on Morse code
speed for more information on Farnsworth pacing.) Practice to
develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are
done.) Practice both with headphones and "open-air" copy as
the code test may be in either format. (If you only
practice one, you may fumble on the other.) Most of all,
don't give up! Recognize when you reach plateaus and keep
trying until you break through them.

Date: 20 Sep 96 12:00:05 EDT From: Marshall Emm <75230.1405@compuserve.com> To: QRP-L <qrp-l@Lehigh.EDU> Subject: [225] Learning Morse (Long) Message-ID: <960920160005_75230.1405_HHB36-3@CompuServe.COM>

The following article came my way recently and I thought it might be of interest to the group (copyright notice at the END allows for this redistribution). As the author of CODEMASTER V, I'd like to point out that the Basic Training module in Codemaster is a variation on the Koch technique, and the full method, exactly as described in the article, can be implemented. Any CM5 users who want to know how can write to me privately for the relevant instructions.

About the only thing in the article that I would argue with is the contention that listening to live Morse is useless.

73 Marshall

SO YOU WANT TO LEARN MORSE CODE How to Avoid Frustration, Minimize the Pain And Gain Full HF Privileges By David G. Finley, N1IRZ Copyright (C) 1995 All Rights Reserved*

Most of what you've been told about learning Morse Code is wrong -- dead wrong. Amateur radio operators traditionally have used the slowest, most frustrating, most painful and least effective techniques possible for gaining code proficiency. It's no wonder that the 13- and 20-word-per-minute requirements for full HF access are considered a nearly insurmountable barrier by many hams.

You can overcome that barrier. You can do it in a reasonable amount of time and with a minimum of frustration and pain. In order to do so, you must approach code training from a different perspective and use different techniques from those common among amateurs for the past half century.

It will require work. You will have to commit yourself to at least one 15-30 minute training session every day until you reach your goal. You may succeed in a month or in several months; individuals differ greatly. Without this committment, however, you may as well not bother.

So what's new here? By using a code training method devised by a psychologist some 60 years ago, you will progress as quickly as you possibly can, with ample reinforcement and little frustration. By understanding this method and how it builds your code proficiency, you will know why you have to spend time practicing and you'll be able to make a reasonable prediction of how long the total effort will require.

We're going to start on your road to success by throwing some time-honored ham-radio traditions onto the trash heap where they belong. These are:

Slow (5 wpm) code -- It ought to be illegal to teach anyone code at 5 wpm Every minute spent toying with 5 wpm code is irrevocably wasted. In addition, as we'll see later, starting with slow code is a virtually-guaranteed path to frustration and quitting. Morse at 5 wpm and Morse at 15 or 20 wpm are completely different critters, and you don't want to waste time on the wrong one.

Charts, mnemonics, musical cues and other "memory aids" -- These things make you think about what you're doing while trying to copy code. That is deadly to proficient copying.

Code tapes -- In very short order, and unconsciously, you'll memorize the tape. This will lull you into false confidence in your ability. That false confidence will be quickly shattered when you hear transmitted text that you haven't memorized.

Copying QSOs off the air -- You don't know the speed of code you find on the bands, and much code on the air is pretty badly sent. All this makes it useless for training purposes.

Now that you know what you're NOT going to do, let's start examining just how you can best gain code proficiency.

The Mechanics: Just what is code training, anyhow?

Go to the shack of a veteran CW operator, or visit the CW station at a club Field Day operation. Watch people copy and send code at 30 to 35 wpm. You'll notice they're pretty relaxed about it; they're not sweating each character as it comes out of the speaker and they're not racking their brains to "figure out" what's being sent. Code has become second nature to them.

That's the key to code proficiency. Copying code must be a thought-free process. When you hear a character, you should know, without thinking, what it is. It should be a REFLEX. In fact, copying above about 10 wpm can only be done by reflex. Above that speed, thought processes are too slow to= succeed.

That's why slow code is a deadly trap, and why traditional amateur methods of code training are so painful and frustrating. Most hams are told to memorize all the characters, then start building their speed. When you do it this way, you build a "lookup table" in your brain, comparing each character you hear with those in the lookup table until you find a match. This process shuts down from overload at about 10 wpm. That's why people experience a "plateau" at 10 wpm, and don't see any progress for weeks or months.

Those who finally get over that "hump" and progress beyond 10 wpm do so because, through constant practice, they have begun to copy code by reflex instead of by thought. They are the

lucky ones; this 10 wpm barrier is where many folks give up out of frustration.

Code training, then, should completely bypass the lookup-table phase and begin by building copying proficiency as a reflex. This was recognized in the 1930s by a German psychologist named Koch, who devised the most efficient method known for Morse training. It's his method, and how you can use it, that we're going to examine in detail.

Morse Training by the Koch Method

Koch's method is a simple, direct way of building reflexes. However, it requires either a computer and Morse software or a personal trainer. That's why it was overlooked for so many years. Now that computers are commonplace, it should become the standard Morse training method. Here's how it works:

You start out by setting up your computer to send you Morse characters at 20 wpm and at an overall sending speed of at least 15 wpm. You then get out your paper and pencil and have the machine start sending -- but only two characters. That's right, for your first sessions, you'll only have two choices. Copy on paper for five minutes, then stop the machine and compare what you copied with what the machine sent. Count characters and calculate your percentage of correct copy.

If your score is 90 percent or better -- congratulations! You just learned your first two characters, and, importantly, you learned them at full speed. You'll never have to learn them over again. If you didn't make 90 percent, practice some more. As soon as you can copy the first two characters with 90 percent accuracy, add a third character to your practice. Your accuracy will drop as you work on assimilating the new character, but it will rise again to 90 percent or better. Then you add the fourth character, and so on.

This method does not allow you to build that lookup table in your brain. To copy at full speed, you MUST build the reflexes in order to achieve 90 percent accuracy. And that's what you're spending your time doing -- building reflexes. Think of it as a parallel to perfecting a tennis swing or mastering a gymnastic routine; you're practicing until you get it right. The Koch method of building code proficiency character-by-character is similar to standard methods of teaching touch typing, another skill that must be reflexive.

This is a very individual method of training -- you progress at your own best speed, and spend only the time required to gain each new character. This means that you will waste no time in reaching your goal.

How much time is required? That will depend on the individual. Koch himself, with hand-picked students, got a group to master 12 wpm code in a mere 13.5 hours. You probably won't match that, but that's much faster than any other method in the psychological literature. You can get an idea of how long it's going to take after you've mastered a few characters. Keep track of your training sessions (some software will do this for you) and calculate your hours-per-character rate (or characters-per-hour if you're really fast!). That, multiplied by the 43 characters in the amateur Morse test, will give a rough idea of how long it's going to take.

While the Koch method is the fastest method of Morse training, speed alone is not its principal advantage. Its principal advantage, and a major difference from other methods, is that it provides you with constant positive reinforcement. This begins with your realization, after mastering the first two characters, that you CAN copy code at 15 or 20 wpm, because you just did it. After that, each new character mastered is further proof of your progress. Contrast that to slowly trying to build speed up from 4 or 5 wpm, then hitting the plateau at 10 wpm and seeing no progress for a long time. With the Koch method, frustration is at a minimum.

Constant testing is necessary to ensure that you maximize the effectiveness of the Koch method. You must copy on paper, so you can grade yourself. Remember, if you score 90 percent accuracy or better, add another character. If you score any less than that, try again. By constantly testing yourself on continuous copying of at least five minutes, you know exactly how you're doing and exactly when you should add another character. This results in the fastest progress possible.

Naturally, with the Koch method, you'll be copying random groups of characters, rather than words, until you've mastered the entire character set. If your software allows, make these groups of random length, rather than a constant stream of five-character groups. This will ease the transition from random groups to actual words. Yes, there is a difference in the rhythm and "feel" of words and random groups. Once you've become accustomed to copying words, you should start copying sample QSOs, which are the format of the amateur tests. Pay special attention to callsigns, locations, and numerals; these are the types of things that can form questions on the test.

As you proceed toward your goal, remember that some days are just going to be better than others and some characters will take longer to assimilate than others. You know, however, that you can reach your goal because you've already mastered

some characters and proven that copying at full speed is something you can do. Keep in mind that what you're doing is building reflexes, and that takes time. The amount of time you require has nothing to do with your intellegence; it's just how long it takes for characters to "sink in" and become part of your reflexes.

So there it is -- your path to passing the 13- or 20-wpm code test. After you've used this method, and start enjoying the wonderful world of HF radio, try a few CW QSOs. With Morse code developed as a reflex, you may just find that you really enjoy using it on the air. After all, you've gained proficiency without the frustrating ordeal that most hams have endured for decades. See you on the HF bands!

A Personal Note

These ideas may sound very bold and unconventional, but I know they work, because they worked for me.

I fell in love with radio in grade school, but was kept off the air for 30 years because I found traditional code training just too frustrating. During those decades, I tried several times to learn Morse, but every time gave up in frustration and disgust -- my progress was just too slow.

In 1991, I became one of the first 500 people to enter ham radio by way of the no-code Technician license. After becoming bored with repeaters and HTs, I decided to make one last attempt to master the code. Fortunately, I stumbled on information about Koch's method, and found that it was the only thing that would work for me. In 1993, after diligent work at my computer, I took my first code test and passed the 20 wpm exam on the first try.

I became very curious about why Koch's method had worked for me when all else had failed. That sent me to libraries to read the now-aging psychological literature about Morse training. I soon realized that the Koch method achieves its speed through directness; if you want to copy reflexively at 15 or 20 wpm, then just start building those reflexes from the start. I also realized that it provides much more

positive feedback than any other method, so you can keep your motivation and a "can-do" attitude throughout your training.

This was knowledge I wanted to share with others, so I began giving lectures to amateur groups on the topic. I quickly found that, after my lectures, "old-timers" would come up and tell me that my ideas on the need for reflexes were absolutely right. Many said that the Koch method sounded similar to the intense code training they had received in military schools.

Probably the only reason Koch's method didn't become standard back in 1936 when he first published it was that the average individual had no way of implementing it. The personal computer has changed that, and the time has come for the Koch method to replace all others. I hope that the speed and positive-reinforcement aspects of the Koch method can cut down the code barrier to a much less formidable size.

Sometime during 1993, those who have not passed at least a 13-wpm code test became the majority of radio amateurs in the United States. While the debate over the code requirement continues to rage, I hope that use of the Koch method can help many more people overcome the barrier and enjoy full HF privileges right now, instead of several years from now when the requirement may be lifted.

I cannot overemphasize my dislike -- even hatred -- for 5 wpm code. As I've outlined above, it is highly counterproductive to gaining proficiency at higher speeds. In order to go from 5 to 13 wpm, you have to start over again, even though you may not realize that while you're doing it. The worst aspect is that many people pass a 5-wpm test, then never go beyond that. They are trapped in the ghetto of the Novice/Tech HF bands. Why waste your time learning a skill (slow code) that has no relevance to real (13+ wpm) code proficiency? Why limit your HF operating to the most unattractive parts of the amateur bands?

Finally, as I was using the Koch method and building my code skills, I intended to forget the code as soon as I passed the test. My 30 years of frustration had built up a bitterness about CW. However, about two weeks after getting my first HF rig on the air, I looked at my straight key and decided to try a CW QSO "just so I can say I did it." Guess what? I enjoyed it. My second CW QSO was with a DX station, and I was hooked. With the encouragement of a CW Elmer, I continued to enjoy the bottom parts of the bands, and now my microphone isn't even plugged into the rig!

If the Koch method could overcome three decades of bitterness and turn me into an enthusiastic CW operator, I think it's

certainly worth a try on your part. Have a go at it. Maybe I'll find you on the CW bands and we can have a ragchew.

Best of luck, and 73.

May I add a few words? All comments so far are very excellent, even for me. I am now 100% able to copy 16-18WPM and counting. I also begun once writing down the character just sent and got stuck at 10WPM. What I did was to force the pipeline in my head into operation by forcing myself to copy behind. Listen to one character but don't write it down until you have heard the following. After a while, listen to the following two characters before writing down the first and so on... When you are able to buffer 5-6 characters, start with words. Use random characters to avoid reading what you write down, this will enhance your reflexive copy. Write, don't type, at least until you reach your writing speed. Read Boatanchor Bob's post again!

The suggestion to move the computer into another room is one of the best. Get on air manually and enjoy! As a beginner rig, look at a QRP kit, there are many.

2428. FS>>Icom IC-706MKII w/numerous accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-18 17:04:34 UTC
From: John Schneider <theoldcop@earthlink.net>
Message-ID: <CgTj6.2847$6N6.294015@newsread2.prod.itd.earthlink.net>
Source record: 64304

I have the following for sale:

1- Icom IC-706MKII in near mint condition, (has small marks at the four mobile mounting bracket holes on the sides of the radio). This radio works as new and is guaranteed not to be DOA. It comes in the original box, as do all of the Icom accessories, and includes the original manual and original hand mic.

2- Icom UT-106 DSP, (installed in the radio, although the original box will also be shipped).

3- OPC-581 separation cable for remote head mounting.

4- MB-62 mobile mounting bracket

5- MB-63 remote head mounting bracket

6- The LUC-3 computer interface cable

I am asking $850.00 for the entire package, (I am not interested in breaking the package up at this time). Buyer pays shipping and ins. I would be willing to trade the rig for a HIGH-END VHF/UHF transceiver plus cash.

If interested please e-mail me direct at: theoldcop@earthlink.net

Thank you.

Maybe I had better describe the radio briefly, since this may not be the proper model number. I don't see a number at all on the radio, this number (BH45B) is on the power supply. This is a Micro Com radio,sort of "cream" colored. It is set up as a base unit with an AC power supply bolted to the bottom of the unit. The base mic connector is on the front of the power supply. It has a LED clock on the right, and four buttons, marked INT, SPVR, A, B, from left to right bove the OFF/VOL and SQUELCH controls. I believe this is a commercial radio, but had been used as a packet rig for some time. Any help will be appreciated.
Tnx, Billy KD5HOZ

I was told that a unit is being evaluated as we speak at the ARRL for QST. The problem is that the magazine is printed two months ahead of time so there is lag time. I have not heard any negative things from any owners as of yet. The head engineer told me that he spent a full year more than planned working out any bugs so it would have a good reputation unlike a few other radios that I won't mention (lemons).

Years ago Ramsey made a surface mount crystal controlled FM TX for the 2 meter band. It was surface mount on a 1''x2.5'' board.

Does anyone still make kit something like this kit that is crystal controlled it does not necessarily have to be surface mount but the smaller the better.

Or if some one has one of theses kits and they don't use it any more, Please contact me!

Thanks & 73's,

Jeff

How about the grey used on the ICR9000, I have a little spot to coat and
would love to find the correct paint code to buy the right stuff.

I am trying to order connectors for a Mitrek that I am modifying, but I don't know what kind of cable it is... I've searched the manuals however I see no reference to a part number or even a description.

What is the official model/name of the white teflon cable inside a Mitrek? Does it have an RG number or equivalent?

Thanks!

OK, OK, give me a break! I just figured that 193,000,000 miles is not that far away (especially with the speeds they drive here in Atlanta).

Actually, at the NASA web site, I found out that some of the transmissions are on some very high frequency wavelengths. But I don't have an array of satellite dishes. I did fly over one once, but I forgot to bring my aluminum beenie to increase my reception.

In article <slrn98mdno.hoi.QSB@animas.frontier.net>, QSB@QRM-QRN.net says...

I just bought a MAHA FNB-41 with one of their C-888 chargers. This
combo is doing a wonderful job. The charger has a reconditioner which
has brought a couple of nicads back from the dead.

I highly recommend.

(The gang at Ham Radio Outlet in Atlanta went out of their way to help
me. My hat is off to them!)

I have a really nice Yaesu FT-900/AT HF Transceiver for auction. This has a built-in Automatic Antenna Tuner. I will also include the original box, manual, FIF-232C Computer Interface Kit, YSK-900 Seperation Kit, Hand mic, Fused DC Power Cord, and schematics.

This is an excellent radio. Its compact size allows easy mobile installation. Covers all Ham bands, and even has 100 kHz - 30 MHz full coverage general receive. This has the amber type Digital Display (Looks really cool!). I am pretty sure that the FT-920 replaced this model. This will be Guaranteed not to be DOA!

The price is really nice & there is NO RESERVE!

Yes. Just shoot off an e-mail to fccinfo@fcc.gov. Be sure to give them your full name and address, phone number, where and from whom you purchased the amp. They will be more than happy to come to your home and tell you a lot about your amp!

Hello!
Our Fire Department has a low band Motorola Mitrek that we would like to sell or trade.

It is a 4 channel, 110 watt, 39-50 MHz, with an extender (noise blanker) and is set up for tone squelch.

The info on the data plate is:
FCC Xmtr Data: CC1155
FCC Rcvr Data: RC0214
Model #: T81JJA4900DK
Ser #: 433HJY1476

For more information on the radio and accessories, or to see photos of the equipment, please visit:

http://www.haworthfire.com/mitrek.html

Asking $50 (plus shipping). Would be interested in trading for VHF equipment.

If you have any questions, please feel free to contact me by e-mail or phone (580-245-2446).

Thanks for your interest!
Kirk

Lessons learned: Send a "call tag" for any merchandise
you buy over the internet!!! This will place YOU in the
drivers seat with respect to damage claims instead of
waiting for someone who is unresponsive and doesn't care
if you get paid or not. UPS is TOTALLY INFLEXIBLE when
it comes to paying the person who "actually" paid for

the shipping if you send someone shipping funds and they put THIER name in the shippers box. It will take a few more days- but the peace of mind knowing that you will not have to wait for months on a damage payment may be worth the extra few days wait.

If this is impractical, keep in mind that whoevers name is in the "shippers" box on the label is the person who will get the damage payment. You should make arrangements with your shipper to use your address for both shipper AND receiver if at all possible!

Sign me- FOUR MONTHS AND COUNTING FOR DAMAGE REIMBURSEMENT

Web,

Sorry to hear of your UPS misfortune. Just another reason why I hate to deal with them. I had a very similar incident myself a few weeks ago, although there was no problem at all in dealing with the seller. It was UPS who was the problem!

I won an eBay auction for a Kenwood TS-850SAT, and the seller shipped it via UPS. It was packed well, but UPS apparently dropped it hard and flat on one side of the carton, and they damaged two of the front panel controls (concentric pots) in the process. The seller had insured the package for the full retail value of the radio. When I found the damage, I emailed the seller and asked him to contact UPS, since I knew that the shipper had to file all claims (from some previous experiences dealing with UPS and having them damage or destroy radio gear). Like you, I wanted to either have the set repaired, or get the parts and repair it myself.

UPS insisted that the radio be shipped back to the seller at MY expense (they would NOT come pick it up!). When it reached the seller, they would send an inspector to look it over. If their inspector determined that we did have a valid damage claim (VERY subjective!), then UPS would decide whether to have the set fixed or just pay the claim and take the radio (and do who knows what with it), and they would then reimburse me for shipping it back to the seller. If they determined that it was not their fault (again, VERY subjective), then they'd wash their hands of the whole thing and the seller and I would be screwed. Nice, huh?

Rather than go through all that crap, I called up East Coast Transistor (authorized Kenwood parts retailer) and purchased the parts at a total cost of less thant $30.00, and fixed the radio myself in about 25 minutes' time, cover-off to cover-on.

This is not the first time that exactly the same thing has happened to me when receiving packages from UPS.

Moral: just because you've insured your package doesn't mean you'll actually get satisfaction from UPS if they damage it! Deal with the Post Office. They treat packages a whole lot more carefully, and they are easier to deal with when there is a damage claim filed!

And that is why I deal with either FEDEX or US Postal, I will not ever deal with UPS again. Ive shipped through them 5 times and all 5 were damaged and trying to get money out of them is like pulling teeth from an alligator. And it PO'es the poor guy buying from you. I wound up sending them the reimbursement and fight UPS, which Ive lost 4 outta 5

Ill never use UPS again,

Stores I buy from however do and most dont have an alternate. There I only pray it doesnt come in damaged. But, most stores will back you up 100% and allow you to ship back for replacement and they deal with UPS.

Many years ago I was discharged from active duty Air Force
and thought instead of going back to the farm I wanted a place
of my own so I find a little efficiency apartment near the homestead
in Bradford county Pa. The radio's came back out and I run a modest
station pretty well staying on 80 and 40.
A trailer next to my apartment wound up with RF on their phone
and the jerkwater phone company that "served (ha-ha)" the area
told me in essence I was going to take my radio's and get rid of them
since they had recording's of me interfering with phones all the way
to Florida!, I told them about the filters that would totally stop the
interference and they told me they were going to have me arrested
and send their recording's to the FAA! I told them where to stick it
as I "escorted the dumb SOB' right out of my place, They came
back to disconnect my phone but found out I did not have a phone
or TV for that matter, So much for that spite move! I then started

running about 700 watts of high level AM and every time I was in QSO
I apologized for anyone who might be hearing me on their phone but
if Jerkwater Inc. would put the filters in line I offered to give them
they would have no problem. After the FAA they were directed to the
FCC who told they the same thing I told them 6 month's earlier.
Anyway one day a half dozen company vans showed up and put
filters on every phone within a mile (sparse country) of me.
The next day I moved back home to the farm which I had intended
to do 4 month earlier and would have done had they not attempted
to threaten me. I have this nasty habit, I am a renegade who doesn't
go away, I never started anything but they are many people, company's
and reps who wound up having their words stuffed right up their butts.

You only have the right's you stick up for and if you want to be a bunch
of sheeple or lemmings you only have yourself's o blame!

In my fine youth, I worked for the Post Office one summer. We sorted boxed packages by hurling them through the air, at the appropriate canvas hoppers. I wouldn't count on the Post Office for delicate handling of anything.

Your best insurance is simply to do an extremely well-padded double boxing, or even a triple boxing.

Source record: 64235

I have never had a claim on anything I have ever sent through UPS and there have been many packages from 100LB amps with glass tubes on down the ladder. The only items I ever received from UPS that were damaged, were clearly poorly packaged and destined to be damaged. Two of them were packaged by "Mail Boxes Etc" and they were pathetic. Two others were packaged by other hams. Fortunately, UPS paid the claims.

Very nice cond. 2-piece 40' crank-up w/ stainless steel mast tube welded
into top. Working perfectly. Owner forced to move-must sell immediately.
$150.00 .
Pickup in Encino, CA or may deliver locally for a fee (owner has trailer).
Email gary@qball.cc

Good advice about the call tag!

I once received a collectable guitar (that was sent out for repair) smashed by UPS. I had the shipper insure it for $2700. I absolutely went through hell trying to get paid. Something like 6 months and a faked heart attack before I finally got the check. I can't understand why they would sell you insurance and not want to pay out on it.

Where I'm going is that the guitar people use 2 day air when shipping UPS. The packages seem to be handled a bit better.

You are right about UPS damages. I used to have a lot of computers
shipped in from CA and some of the consoles were CRUSHED. Upon inquiry,
I learned that ground handling equipment used is hydraulic and will act
like a trash compacter if the package gets caught sideways.
2nd day AIR will result in less automated handling, but costs more.
Sometimes it is worth the price to avoid damage problems. JJ

Dr OM!
My Kenwood TR-751E 2 metre all-mode is making trouble. It's probably the potentiometers for squelch and volume which are causing all the problems. It looks as though the potentiometer-block is an Alps product but I'm not sure. Did you have similar problems and do you know how to solve? The national dealer can't help!

2523. FA: {LAST DAY!} Yaesu FT-900/AT HF Rig LOADED!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-21 16:09:21 UTC
From: radiotek@pacbell.net
Message-ID: <3a93e68a.164619036@news.nvbell.net>
Source record: 64249

I have a really nice Yaesu FT-900/AT HF Transceiver for auction. It has the built-in Auto Tuner. It comes with FIF-232C Computer Interface Box, YSK-900 Seperation Kit, Hand Mic, Power Cord, Original Box, Manual & Schematics.

This is an excellent radio for either base or mobile operation. Its size allows for easy mobile installation. It covers all Ham Bands and 100 kHz - 30 MHz receive. Modes are USB, LSB, CW, AM, FM. FM Mode has PL Encode to access 10 meter repeaters. Auto Tuner has memories to store tuning. Rig has 100 memory channels.

The price is excellent & there is NO RESERVE!

The auction will end TODAY at about 11:45 AM Pacific Time, Feb. 21!

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1214840198

While all the information about United Parcel Smashers and their handling and insurance problems is good to know and has been discussed almost forever it seems, the real problem here is JOON KYONG!

It seems as this "gentleman" has refused to follow through on this transaction and do what a reasonable seller would do. I would certainly hope that the auction winner who is left "holding the parts?" has been in contact with eBay about this individual to get his eBay account closed.

In my mind, the sale or auction of gear includes the participation of the seller or auctioner until the equipment is in the hands of the buyer or auction high bidder and is in the condition as described.

I can't help why there are only comments about UPS when the auctioner, JOON KYONG, seems to be the one at fault and with whom the original poster needs some assistance.

The only Joon Kyong I find in the CA phone listings is in Anaheim. Perhaps the poster will let us know if this is the correct person and maybe somebody reading this list and living in that area will persuade him to meet his obligations to the auction winner!!!!

Message-ID: <7LTk6.956$Gv.4735@news.inreach.com>
Source record: 64258
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,sci.electronics.design

I apologize for cross-posting, but I'm getting a little desparate.

I need a source for 4.332MHz and/or 8.664MHz (or 17.328MHz) crystals for an important project I'm working on. So far, I've found only one source (Thanks Francine!), but the prudent man never only has one source for a part. This is especially true when that source might have trouble delivering the quantity desired.

So, if you know a place or places that might have these specific crystal values, respond here or send me an email at cautery@montacnospam.com. Note: be sure to remove the "nospam" from the domain name.

I really need y'alls help here!

Thank in advance,
Clay

Hi Shawn,

You don't want to have to order that cable new... it's really costly. The best way to find it is to call a two-way radio shop and ask if they have any used or new-old-stock Motorola 800/900MHz antenna kits with that coax. I see the stuff at the ham flea markets being sold by surplus two-way dealers. It's just teflon coax similar to RG-400, RG-393 or RG-404.

You can also call some duplexer mfgrs and ask about it.... Belden has an on line wire web site (that's a pain to use).

Otherwise you should get on the phone or go to the ham flea markets...

cheers

GE Monogram SP2550 VHF ex CSX radio with battery and charger $100.00
GE NPC200 UHF 16 channel scan with battery and rapid charger. New Uniden case. Radio works and looks new. $150.00
GE Master 2 UHF 75 watt. with pre-amp no accessories. No Icoms $75.00
GE Master 2 UHF 40 watt repeater in a Desk mate case with GE controller. No duplexers. I will add a UHF Master 2 75 watt for parts with the station that way you can make it a 75 watt with a pre-amp. $650.00
Motorola MX300s software adapter for the 1801 suitcase programmer. part number RTL5805C. $250.00
GE Master exec 2 Mobile repeater. VHF radio with a UHF receive section. with your choice of a Master 2 or a delta cable. $25.00 I have several of these.
GE Voice guard 9600 series encryption boxes. $20.00 I have several of these.
Yaesu FT50r Dual band HT in the box with manual and charger. With these accessories
drop in charger, 4 5 watt batteries(Cost $186.00), 1 2 watt battery, 2 belt clips $250.00
Motorola Micor VHF 110 watt mobile. drawer only. make a repeater. $30.00 ea.
GE Mobile Vehicle charger. Turns the MP-A, MPD, MTL, and TPX into a mobile radio and charges the battery. Comes with the mic, speaker and wiring harness. this is my personal setup so I know it works. Price with one of the above radio's $100.00 if purchased separately $125.00
GE MP-A, MTL, MPD, and TPX speaker Mic's new in the box with all paperwork. $35.00. I have 2 of these. I also have 1 used Public safety speaker mic for $35.00
Marconi UHF portable HT 16 channel. Looks like a standard. I powered up with a power supply and the thing works and has good sensitivity. No charger so I do not know about the battery. about an 8.5 $75.00
My terms
Shipping is the responsibility of the buyer on all Items. All Items sold as is but Portable radio's will not be DOA. I will not cover return shipping but will pay to ship a replacement if I have one. I can have the above radio's programmed ask about price. Trades welcome just ask.
Wanted Items
4EX22A10 mini e-prom programmer.
TQ3330 Delta ranger interface. (found one)
TQ2310 suitcase programmer if I can trade above items for it.
Dual band mobile ham radio's.
Cash also works

THIS IS NOT FOR ME, but Bill WB6YLT here in San Diego needs a service manual for the above radio. He has searched the web vendors with no success. Bill will be happy to recompense with all costs.

Please respond via E-Mail to: wb6ylt1999@aol.com
but not to me AC6V
Thanks from both Bill and I.

I dont operate UHF any more and I would like to get a nice 2 meter mobile. So Im considering selling my FT-2700 dual band. What would you fellows feel a fair price is. Cosmetcially its a mobil rig. The panel lites are out. Also the a couple of the front buttons are a tad loose. Other than that it operates perfectly. Or would it be better served to fix the lights and repaint it first.

thanks

Hello,

I am wondering what you think...

I have a FT-847 with its power cable connected to the vehicles battery in the engine compartment. I understand the you would not want to start up the vehicle while the radio is turned on...but how about when the radio is turned off? Is there any chance of damage to the radio if its connected but turned off while starting up the vehicle?

I have yeses and nos....?

Jason

Source record: 64280

Hello,

I have had my FT-847 since September last year and its been great. I have worked up and down HF and 6 meters... 2m works great have done FM and SSB on 2 meters, nice. Never transmitted on 440 yet...The rig has no VOX, but to me, not a big deal...never used it on the rigs I've had that did have it... Wonderful all in one rig. Comes with a nice hand mic thats comfortable to use(unlike some Icom hand mics). I have ordered a SSB Inrad 2.1kHz filter for the radio to give it better selectivity and help filter QRM on 20 meters... You really can't go wrong with this rig, its a lot of radio for the what $1340.00 new now? but remember, no internal tuner or power supply. I love the four antenna jacks on the back. OH and how could I forget the DSP in this rig! It is the first DSP in a rig that I thought really works! It does a excellent job of pulling signals in out of the noise... I am now a believer in DSP!

Go ahead, you won't be disappointed!

Jason S. Hulet

The extremely large equivalent capacitance of the battery should protect you from
any surges upon start-up. The resistance and the inductance of the wires between the
battery and
the starter & alternator will absorb or radiate the transients.
I see no problem here, even if the radio is on during start-up.
Al

My Kenwood TS 530S broke. I have no receive and the frequency display is out. However, if I set the switch to check HV, it indicates the usual 850 volts. Any ideas what might be wrong?

This suddenly happened while I was just using it as a receiver. I haven't keyed the transmitter in months.

Alan

Hi All;
I got a bunch of Audio Amplifier boards with 4 transistors on them.
Has 3-2n3904 and 1-2n3906 with 8 ohm output, run off about 5-12vdc.
The size is about 3" x 4".
The sizes and placement of components may vary a bit from this picture.

http://members.nbci.com/wa2rqy/audioamp.jpg

Use it in your portable qrp rig, built it into something or use with your xtal
radio.
Price is $10ppd.

From: Bob Javits <robtj229@bellatlantic.net>
Message-ID: <3A948C5A.2390AA07@bellatlantic.net>
Source record: 64285

Has anyone built this kit? i'm sure it works as advertised, but i'm concerned about power supply problems.

it appears from the manual that you need 12 volts for a battery up to approx. 6 volts, and 21 volts for a 12 volt battery, etc. this seems to indicate a variable power supply or multiple power supplies, or something similar..

any info out there?????

thanks.... bob j

Well, you know your plate voltage is still good. That supply has nothing to do with the receiver. You will likely have to do a little checking to see whats kuput. Could be any one of many things. Make sure all the band switches are clean and in the right position for a start. Being you don't have a readout, you could have a pll unlock or other related problem. MK

Dunno, my 706 is much this way, and I haven't worried about it so far.
It pretty much turns itself off for a second and recycles whenever I
start the engine. The reason I haven't worried about this, is I would
think surely icom has made sure this would not damage the rig. Surely
75% of 706's are used in cars where this would be a common problem. I've
never heard of problems leaving the rigs on when starting so far. The
weird part about this, is my radio is direct to the battery. The radio
seems to know by the voltage drop to shut down for a second. I don't
know if this is by design or just the way it works, but so far the radio
just cycles back up to where I had it. No problems that I can see. The
way I see it is I bet I would put alot more wear on the power switch
turning it off every time, than I would the rig itself by leaving it on
when starting. MK

2563. legal limit in the old days

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-22 06:54:08 UTC
From: "William F. Hagen" <whagen@inreach.com>
Message-ID: <3A94B790.EEF0B248@inreach.com>
Source record: 64289

Here's a question for all, Ive been looking at legal limit amps, ans today the limit is 1500 watts pep output. Some time in the past I think the legal limit was described as 2 kw input, which would be different output levels from different rigs, such as around 1200 watts pep in an ab2 amp.
Does anyone know when this was, or when it changed, and what types of output power did people typically get with a 2 kw input?
thanks
William F. Hagen kc6ufe

Pretty difficult to tell without looking at a few things. Try getting the
schematics out and checking some of the voltage regulators. That's a good place
to start.

Is there an internal fuse that runs the receiver circuitry separately from
the transmitter?

The legal limit in the "old" days was 1 KW DC. Thus you could get
about 750 Watts out in class C CW, and about 500 Watts out in
AB1 if I remember correctly. All this was before 1990.

I've received a couple of emails that explained it. There is a keypad on the radio, and each of the buttons selects one of the amateur bands (the keypad also is used for directly entering a frequency, but that's another mode). Well, when you select one of the bands, it goes to a particular frequency (not the band edge). Then as you press the band key repeatedly, it cycle through three different frequencies that you have selected before. Thus, you can have three favorite frequencies on each band that are very easy to get to.

I dealt with this guy before - Joon Kyong

I won an auction from him for 2 radios and made sent payment via PayPal.
PayPal confirmed the payment was made and received however, he disagreed and
would not send the radio until payment is received.

I sent him the PayPal transaction number and opened a case with PayPal to
look into this. After 4 weeks he finally said he received payment and will
send the radios out.

Below is his contact information.

Question/comment from ANOTHER "old fart":

WHY do posters like the above ASSUME there IS, or MUST BE a CHOICE between a big antenna OR a BIG amp? Why can't they envision the possibility of BOTH being employed at the same time? HELL, *I* have both a decent antenna system AND several legal limit amps - and somehow, (someone will pop up and say "selfishly"), I don't feel the overwhelming compulsion to apologize for EITHER the antennas OR the amps...

YES, you CAN have BOTH!

2576. FS: Collins KWM2-A we (cca good)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-22 18:49:58 UTC
From: Ron Manfredi <wa2eio@mindspring.com>
Message-ID: <3A955F56.607DC173@mindspring.com>
Source record: 64153

I have a nice user KWM2-A for sale.

This is a Factory KWM2-A (with the wide eyebrows), with plug in relays, but not the teflon wiring. The serial number engraved into the rear chassis panel is 10,702. The label on the chassis is not legible. The dates on the components
indicate probable manufacture in 1965. Has spinner type main tuning knob with scratches in the aluminum insert, cylindrical ssb filter, and the hardware to secure a PM-2 supply to it. Comes with the standard Ham band crystals in the lower sockets.
The cabinet has been repainted, color looks close, but finish is flatter

that the normal Collins paint. (a fair paint job) There is some wear on the lower edge of the front panel. I would rate this unit as CCA Good/ (fair). The feet are not original, no front risers. Chassis is dirty, but no corrosion or missing parts. It would clean up well. The antenna connector's ceramic is a bit worn, but an RCA plug makes positive contact.

This radio is working fine electrically; I can get a full 100 W output on all bands, and the receive agc action is smooth; I am not sure if the

agc mod has been done or if this unit incorporated the changes, but is does sound nice, and shows good sensitivity. All controls have been cleaned. Comes with an orginal manual in great shape. Since its overall appearance is not mint, I rate this as a good user unit, not a collectable. I would ship CONUS for $725.

73,
Ron WA2EIO

Hello all.
I have a near mint condition 940SAT for sale in the Detroit area. Unit has a minor scuff on the top and the display light has an occasional problem of remaining unlit when the rig is first turned on after some inactivity (pops on when you toggle the 'dim' button) but otherwise looks and works perfect. I'm moving to a more antenna restrictive apartment so I need to sell my baby. Comes with the power cord and manual. No box or microphone. $1000 OBO. If shipping outside of the Detroit area, I will need some help with shipping costs.
Will also consider trade for an IC-706MkIIG or FT-100

2580. Improving IC706MKIIG AM receive

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-22 20:37:09 UTC
From: nono@spams_club.com
Message-ID: <3a957871.1145888832@enews.newsguy.com>
Source record: 64156

Hi, I just purchased a new IC706MK2G for mobile work and am very happy with it EXCEPT for AM SWL reception. There are two problems with using this rig for SWLing. 1) If you use the noise blanker the rig distorts very badly on strong signals. You must leave the NB off to listen to SW broadcasts or ride the RF gain control constantly. I can live with leaving the NB off since my vehicle is pretty quiet. 2) The front end is VERY broad. Anything +/- 15Khz is audible. Why is it one could go to Radio Shack and buy a cheap CB set for $49 with a working noise blanker that is effective and not sensitive to the strength of the signal and will nicely reject a strong signal 10Khz away while a $1000 ham radio doesn't perform as well? This is just not acceptable.

Has anyone come up with any mods that will allow decent SWL use for the 706MK2G? I'd love to hear from you!

Source record: 64157

Greetings,
Anyone that can help me figure out this message and what I can do about correcting it? I was attempting to read my MCS2000 mobile rig and it said "Codeplug Too New For This Application" I am using Ver R04.00.00 Nov '96.

Is it the fact the software is too old for this unit or is there something else that needs to be done. I would like to get this thing programmed with the proper specs.

Please let me know what you think and what I can do... and if its the software thats too old how can I purchase or contact to buy/upgrade to the lastest software to program this unit.

Thanks for your help and hope to get this problem solved..

Jeffrey

2582. Field operation, batteries, antennas etc.

Hi guys !
I am really interested to operate my HF radio in a field, but I have no idea what stuff I need to have for this. As I know, I have to use some "deep charge" battery like YUASA or EXCIDE instead of regular car battery.
That's it - I don't know anything else ...

Environment: Field or small hill, FT1000MP, 50-100W SSB-CW, medium activity, about one day operation ...

What kind-type-model of battery I do need?
How many Amp-Hours?
Do I need to install fuses in DC cord? How many of them?
How I can recharge the batteries?
Any suggestions about antenna type - multiband dipole, delta, vertical ?

I will really appreciate everything - links, books, magazines, personal stories, dealership names&locations ....

Alex, KD7LUR (ex US4LNE)
Portland, OR

I have been using mobile rigs in the car for over 30 years and for the first 10 or so years I connected the low power 2 meter rigs to a point in the electrical system that was powered up when the switch was turned on. When the rigs started drawing enough power the normal car wiring would not handle it, I installed a relay where the coil pulls in when the switch is turned on. The wire from the battery goes to the contacts of the relay. This way the rigs still turn on with the switch. They had the power switched on all the time. Just never did like cutting them off and on every time I got in the car.

Some of the rigs are actually connected all the time to the power cables and draw a small ammount of curent all the time. When you switch them on a big transistor passes the current to the main current drawing circuit of the rig. This is similar to the TV sets with remote controls. Doubt that off or on would make any differance.

If the rig couldn't take a starting surge, I wouldn't think much of the rig. The radios and electronics in the cars take it all the time.

Generally the INPUT is twice the OUTPUT.
2KW-input = 1KW output or pretty close + or - some!
There are other factors to consider, but that'll give you a pretty
good guess!

Yes the version of RSS you are attempting to use is too old for your radio.
The only legit place to get new software is Motorola 800-422-4210.

2587. Re: Start vehicle with Rig contected to the battery???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-22 23:17:35 UTC
From: Bob Lewis <rlewis@staffnet.com>
Message-ID: <k5hl6.762$uW1.3690@newsfeed.slurp.net>
Source record: 64162

The Radio Shack 2M rig has a very large (2000 MFD as I recall) capacitor in an input filter on the 12 volt supply. The front panel on/off switch is located between the capacitor (which always has 12 volts applied from the car's battery) and the rest of the rig. When you use this on/off switch the power to the rig is a clean switch from +12 to 14 VDC to zero. When I try to leave this switch on and switch the power to the rig with a relay, the capacitor holds a charge when the power relay opens which causes the voltage to drop gradually. The gradual drop down to zero intermittantly causes the memory to reset, clearing all my programmed info. With this rig I find that you must use the front panel on/off switch.

Over the years I've had other rigs that reset the memory if you left them on when starting the car, I assume also because of the low voltage.

2588. Beware of Tom Sevart N2UHC

Source record: 64163

To anyone who intends to deal with Tom Sevart, please read this message first!

I purchased a Icom R71A, which Tom advertised right here on RecRadioSwap. He advertised that it was in excellent condition and from a non-smoker.

I sent him the money he asked for, he would not ship COD, so he had my money first, which would be fine if he sent what he advertised.

But when the radio arrived, it did not work, all the screws were loose and odd colors. He obviously had been in the radio and there was an obvious problem with it working.

I called him, he told me, oh, I was afraid that might happen. So he knew it had a problem but NEVER disclosed it to me when I was inquiring about purchasing i t.

He told me he would send me back a check and then I would send him back the radio. Ten minutes later, he called and said his wife spent the money and has no money to send me and hung up the phone on me.

Therefore, I'm stuck with TOm's bomb. It cost me $400. and the bum won't fess up to his responsibility.

So, I am posting here a "BEWARE" and will give his info so NO ONE else will have to be ripped off like I was.

Thomas M. Sevart N2UHC
307 Granby
Frontenac, KS 66763-2440
(316) 231-0228

Do yourself a favor, and never deal with this character. He is a disgrace to the Ham radio hobby. His call is N2UHC and should be remembered as a crook.

I will, however, look into other avenues of getting my money back from this thief.

Here is a copy of his ad:

I have an R71A for sale in excellent condition. Coverage is 100 KHZ - 30
MHZ AM/FM/USB/LSB/CW/RTTY. 32 memory channels. Optional FM board installed
& remote control included. Owner is a non-smoker. I am asking $400 firm.

The receiver can be seen at http://photos.yahoo.com by clicking on "Radio
Pics." I want to sell this receiver so I can buy an R75. If interested,
contact me at n2uhc@yahoo.com.

2589. Re: Leaving your Filaments on: Was Start vehicle with Rig connected to the battery???

Message-ID: <3A95A47C.664C@bellsouth.net>
Source record: 64164

This thread reminded me of the old days of BIG tubes, dynamotors, etc. When I started using mobile HF equipment, it wasn't a matter of starting the car with the radio on. If you left the filaments on (accidentally), you wouldn't start at all! LOL! For me, it started a habit I still can't break--turning off all radios when stopping unless it was for a minute or two. My old mobile transmitter would run the battery down in 30 MINUTES if left on. Those filaments drew about 25 amps just idling! Now we can count idling draw in milliamps, and about 20 amps for a 100 watt rig in transmit. Way back when, my headlights would "dim" when the mike was keyed.

How many of you "veteran" hams remember leaving your filaments on over night and being late for work? LOL!

The radio worked completely fine when I shipped it. I was using it on
my radio desk right up to the day I shipped it.

> I called him, he told me, oh, I was afraid that might happen. So he
> knew it had a problem but NEVER disclosed it to me when I was

The only problem with the radio is apparently the Voltage-Controlled
Oscillator (VCO) circuitry that needs to be tweaked slightly. The
receiver had this problem when I got it, I tweaked it, and it worked
fine for the two years or so that I owned it, right up to the point
when I switched it off and packed it in the box. I had no way of
knowing that the VCO would get out of tune again. I offered to tell
Mr. Schneider how to do this but he was extremely belligerant on the
phone.

> He told me he would send me back a check and then I would send him
> back the radio. Ten minutes later, he called and said his wife

I told you I do not have the money right now, but would send it when I
got it. After you took a threatening tone with me, I felt the
converation was going nowhere, so I terminated the call.

> Do yourself a favor, and never deal with this character. He is a

We had a deal, I shipped you a working radio. It was working when it
left my house. I'm not responsible for what effects a cross-country
trip will have on the radio.

> I will, however, look into other avenues of getting my money back
from
> this thief.

I offered to make good on the radio, but once you became extremely
belligerant and threatening toward me, the deal is final. I tried to

be more than fair with you, but you were being completely
unreasonable.

Consider the deal done.

Well, Agilent Technologies (used to be HP) makes numerous spectrum analyzers which tune from around 100Hz to 20-50GHz, many have a demodulator option, both AM and FM, which has an attached speaker. This is probably about as close as you're going to get to being able to listen to "any radio frequency". As a bonus, you can also see the signal on the display, and when the cell call hops to a different freq., you can see where it went and follow it.

How much? Well, they start in the range of $7,500 and go up to around $102,000.

> about one day operation ...
>
> What kind-type-model of battery I do need?

Really big to meet your wishes (see below). As you say, deep
discharge rated. Brands are less important. I would not buy a battery
that is only rated for "cranking" and "reserve" amps. I ran across
this for some so called deep discharge batteries. I feel that if they
won't specify the A/H at a given discharge rate, there is a (not so
good) reason.

> How many Amp-Hours?

Check you radio manual for radio current draw on receive and
transmit.
Number of receive hours times (x) amps = xx
Number of transmit hours times (x) amps = xx
---
add, then multiply by 1.25

This is the amp-hour rating which will about suit you needs. Note
that most battery A/H specs are for a 20 hour rate. Shorter times
(higher discharge rates) reduce the effective capacity. The 1.25
factor is an attempt to compensate for this and to avoid completely
discharging the battery during use period (hard on bat life + radio
may not work well on 11 volts or so).

> Do I need to install fuses in DC cord? How many of them?

Fuse both the + and - leads from the battery as close as possible to
the battery. Use heavy duty fuses and large wire to minimize voltage
drop. For a SHORT run using your rig, I would use #10 or larger.

> How I can recharge the batteries?

A battery charger :) Seriously, for a battery of the size you are
requiring, a genset and charger would be best. ...Of course, if you

have the generator, you don't need a battery. A very large solar cell array / charger if you have lots of sunny days between sessions. It could be done with a car/truck, but would take a while and could be dangerous to the vehicle systems if not done just right!!!! Beware of this.

> Any suggestions about antenna type - multiband dipole, delta, vertical ?

This depends entirely on what bands you wish to use and what will be available to mount the antenna. Generally speaking, and given there would be something to hang it from, I would go with dipoles for the desired bands. A vertical would be practical only if it is the type using a "counterpoise" rather than radials. Sufficient radials for a "conventional" vertical, for this mode of operation is not practical.

A (fishing) spinning rig, slingshot with reel/line, or small bow/arrow w/reel line, and some nylon cord can be very useful to hang dipoles. I prefer the bow/arrow for best range and control. Have weighted, blunt tip arrow with hole drilled in nock? (rear) to tie ~17# fishing line. Use that to pull up 1/16" or 1/8" nylon.

The screws were not mismatched. They are the originals that came with the radio. The reason one was discolored was because I usually rest my fingers on top of the radio while tuning with my thumb.

> The VCO needed tweaking?
>
> That indicates a radio that's NOT in excellent condition and YOU knew it
> Tom. You mis-represented the radio Tom. Plain and simple.
>

The VCO did not need tweaking when it left my house. Plain and simple. It was like that when I got it, I fixed the problem, and enjoyed the receiver for around two years. I didn't whine or complain about having a broken receiver, nor did I feel that a simple tweak done two years ago needed to be brought up, since it worked fine since. It's apparent that a weeklong trip in the back of a UPS truck threw the VCO out of alignment.

I offered to make good on the deal until Mr. Schneider became abusive & threatening toward me. Once he did that, I didn't want to have any more to do with him.

This isn't about "the way he spoke to you" it IS about selling a radio
you quite likely KNEW needed help, and THEN use whatever excuse comes
to mind as reason to cop out on the deal - YOU would be highly put out
and screaming yourself if the situation was reversed - and YOU KNOW
IT!

So do the REST of us, and I'm sure there will always be a few around
to warn newcomers of your character flaws if you attempt other
rip-offs down the road in this group...

This is not about beligerance.. this is about honesty and integrity. The facts are the facts. You represented the radio as "for sale in excellent condition" and "want to sell this receiver so I can buy an R75". Neither of these was apparently true. The first at the very least. The seller in such cases is obligated morally if not legally to rectify any such problem. "The customer is always right" is still the prime rule of business. You still need to follow through, and if you wish to blame UPS for the malfunction, then instead of considering the deal "closed" you should file a claim for damages and give this person a working radio, or his money back. Period.

2603. Need Alinco DR605T Instructions

I purchased an Alinco DR605T on eBay which did not include the instruction manual. It is not available online from Alinco.
Can someone help. I have had the radio installed for one day now and have not figured out how to access more memories than one call frequency for each band. Also, should I be able to direct key in a frequency from the Mike keypad? If so, how?

Thanks to anyone who can help.
Ron

I had a problem with the S-meter lamp in my R71A burning out a lot too.
Replace it with a 12V lamp and put a 47 Ohm resistor in series with the
lamp. It will be a little dimmer, but the meter will still have a nice
glow.

Radio Shack sells 12V lamps, but I don't know the part number off hand. I'd
suggest you ask the sales clerk, but would be quicker to just look for them
yourself.

>the legal limit was described as 2 kw input, which would be different
>output levels from different rigs, such as around 1200 watts pep in an
>ab2 amp.

The legal limit used to be 1000 watts DC input. When SSB became popular, you were allowed 2000 PEP input because you couldn't measure DC input on SSB and at 2000 watts PEP input you were averaging around 1000 input. Typically, you got around 1200 to 1400 watts out from a typical vacuum tube amp. Solid state amps do less, around 50% out. Speech processors became popular because you could raise the average power without raising the peak power. On cw, it was a huge increase, going from 1000 watts input to 1500 watts output. On AM, however, the power went down. At 1000 watts DC input, you were hitting 4000 watts PEP input, since the peak power is 4 times the carrier input at 100% modulation. AM being limited to 1500 watts output represents a big decrease from the old rules.

Getting a 5 watt am cb rig to work on 19 channels is a lot easier than
getting a 100 watt ham rig to work on all bands, 160 through 440, at
100 watts, in 4 or 5 different modes -- especially when the 706
displaces little more space than the cb rig :-)

Ya can't have everything in a tiny box that tries to do everything.

> I have yeses and nos....?
>
> Jason

I did that for some time in my 91 Chev pickup, no problem.
THen got a new 99 pickup. Rig hooked up same way as old
vehicle. Started vehicle with rig on... first time.
Locked up my Kenwood TM732 so bad, I had to take it apart
to unsolder the lithium battery to clear the memory.
Would not turn off, change channels, anything. Power
plug pulled, and back in, rig still locked up.

I now turn off the rig when starting vehicle.

Your milage may vary...
Vic

Do you realize how lame this sounds?

I've never heard of a circuit "getting out of tune" during shipment,
unless the rig was kicked around the the point of case damage.

> We had a deal, I shipped you a working radio. It was working when it
> left my house. I'm not responsible for what effects a cross-country
> trip will have on the radio.

If it was properly packed, it should have arrived in the same shape it
was in when you shipped it. If you didn't properly pack it, then this
is your responsibility.

If you did properly pack it, then contact UPS about the damage.

One way or another, you are responsible to make this good.

>Fuse both the + and - leads from the battery as close as possible to
>the battery.

While it makes sense to fuse both the + and - leads when operating rigs directly from the build in car battery, in case the heavy wire between the car frame and the - pole of battery is broken or disconnected. In this case the starter current would flow from the permanently installed radio frame (or antenna ground plane) through the negative radio power supply wire to the battery, causing a lot of damage.

If the radio is operated from a dedicated deep discharge battery, which is separate from the electric system in the car, I do not see any reason for putting a fuse on the negative pole, since it only increases the loop resistance. The fuse installed close to the positive pole of the battery should be enough to protect the wires in case of failures in the cabling between the battery and the radio. The internal fuse in the radio should protect against failures _inside_ the radio.

I have a Yaesu FT-33R 220MHz HT that is in GREAT shape. It is only about a year old. Not actually a year yet. It has the CTCSS board and the DTMF keypad installed in it. The Yaesu Battery is BRAND new! Manual is in perfect shape as well. Never been creased! I am asking $175 plus shipping of your choice. Or I will be at the Dalton Georgia Hamfest this weekend. You can contact me and/or SEE and use the HT there as well. 146.55 223.500 or 446.050 simplex. Thanks....

Baloney. I just used a cheap CB as an (admittedly poor) example. I have at least a half dozen SW general coverage recievers. The
706 is more expensive than all but one of them and it is by FAR the worst at SC BC reception. Even my Yaesu VX-5R hand held has
better selectivity. The only thing that saves the 706 from being completely worthless at SWLing is its excellent DSP. With the
DSP on and automatic notch filter to eliminate the 5 Khz tones from adjacent channels it is at least possible to listen to
stronger SW broadcasts.

The thing that really the thing that makes the 706 poor is the broad front end. If it were not for that it would be a fine SWL
rig. You litterally have cannot tell the exact frequency a station is broadcasting on without briefly switching in the narrow
SSB filter then tune to find the carrier then switch the filter back out to listen. (It is much too narrow to listen to AM!)

Has anyone tried the wide 2.8 Khz SSB filter for AM SWL reception? I'm tempted to try it but am afraid that it too will be too
narrow.

Trying to work HF (especially on 40 or 20 meters) with 2 dudes running 1 to 10 KW talking across town and occupying 500 KHz of band width gets to be annoying. I had a QSO after calling CQ with a guy about 100 miles North of me on 40 meters, he was running 1.5 KW output at the start of the QSO, after shutting down his "foot warmer" he only dropped from 10 dB over S9 to S9. He was splattering all over the place before and reduced his bandwidth and readiablity by factor of 10 after pulling the "big switch". I have no problem with responsible use of power but, when someone has to have the "Big Radio on the Channel". Then I personally do.

That's my opinion and I'm stickin' to it.

But your sw receivers don't have to transmit, and do all the things a
general purpose transceiver does that covers 160 through 440.
Broadcast reception was a low priority for this rig. It's going to be
optimized mainly for ssb for hf and fm for vhf.

> Even my Yaesu VX-5R hand held has

2.8 is way too narrow. You need 4, 6 or 8 khz, or more, for decent am broadcast reception.

You might try Sherwood or International Crystal.

There might also be some 706 reflectors where you could get advice.

I want to buy used Signal Generator AM/FM up to 500MHz on Germany market.

Please send model, price and address.

Alexander

Emadu@eunet.yu

2619. FS>>Icom 706-MKII w/accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-23 15:17:58 UTC
From: John Schneider <theoldcop@earthlink.net>
Message-ID: <Gavl6.2874$L04.330885@newsread2.prod.itd.earthlink.net>
Source record: 64194

I have the following accessories for sale or trade:

1-Icom 706-MKII. This radio is in excellent shape and only has very minor marks near the mobile mounting bracket holes. It is shipped in the original box with original manual, power cord, and quick sheet. The accessories listed below are also part of the package:

1- OPC-581 remote head separation cable
2- MB-63 remote head mounting bracket
3- MB-62 transceiver, (body), mounting bracket
4- UT-106 DSP already installed, but original box and paperwork will be shipped
5- LUC-3 computer interface cable

I am interested in trading this package, (complete), for a high-end VHF/UHF mobile rig + cash or high-end mobile antenna, or I can sell the whole shebang for $800.00.

Please e-mail me direct if interested at theoldcop@earthlnk.net

Thank you - John Schneider

2621. FS: Yaesu FT-50 w/800 MHz + Accy's

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-23 15:54:51 UTC
From: noah824@att.net
Message-ID: <fJvl6.1850$gc7.137061@bgtnsc07-news.ops.worldnet.att.net>
Source record: 64196

I'm selling a Yaesu FT-50 VHF/UHF handheld radio. The radio is in great condition, works fine and has no scratches on the display. It was originally an FT-50R, but I recently upgraded it to "RD" by adding the 112 keypad, which gives it voice recording and CTCSS capabilities.

I'm not sure of the exact frequency ranges, but I did a software mod to allow this thing to RX and TX all over the bands, including full 800 MHz coverage.

This package will include the following:

- FT-50 Radio
- Original SMA Antenna
- 2 FNB-47 Batteries, 1 FNB-40 Slim Battery. (These all work, can't guarantee their internal condition though)
-1 NEW High-Capacity NiMH Battery
-1 Drop-In Rapid Charger
-1 NC-60B NiCad Charger
-1 CSC-68 Protective Radio Case
-1 FT-50 Instruction Manual
-1 Vehicle Battery Eliminator w/cigarette plug

$255 (including shipping to the 48 states) The buyer can pay with either a money order or with PayPal. Guaranteed not DOA, but as with all electronics sold as-is. Please e-mail any questions.

Al,

What you describe is the fact that Icom
has a 9KHz filter in the AM IF. I have
been reluctant to buy one because of the
same reason. I own an Icom 756 and installed a 6KHz AM filter in it. It now
works great! However, no one has come
up with a filter replacement or "fix" for the
706. If you hear of anything....please let
me know.

By the way, I can't remember the gent
who is marketing the 756/746 6KHz
AM filters, but it works very well.

Ain't the Internet great! I'm happy to see the quick and merciless spanking
Mr. Kyong is receiving. I too have been the victim of UPS and it's nefarious
handling of damage claims, also those of a lazy, unresponsive seller. The
Only reason I use them is for odd-ball packages that the USPS can't
accept. The call tag issue is a good one, as is having the shipper put your
name and addy in as "Shipper." We live and learn, don't we?
Good luck Mr. Williams. I hope you keep the NG posted as to the final
outcome.

You're missing the point. For what this rig costs it is inexcusable that the AM recieve is so poor. It is a real shame that the manufacturers have to cut corners to out-price one another to this extreme. I would rather pay the $100 or so more and have decent recption in ALL advertised modes.

Come to think of it, this is THE most expensive rig with general coverage I own not the second most expensive like I stated earlier. I paid something like $800 for my Kenwood TS440 years ago and it has perfect SW broadcase reception. (It's just a little BIG for mobile use!)

Yes, I knew that. (Sigh) It was just wishful thinking on my part. I'm beginning to wish I had for the FT100D instead. At least they offer a filter taylored for BC reception. It's a real shame. I am 100% satisfied with all other aspects of the 706MKIIG.

Great Pat! Hopefully this gentleman will come up with a 6KHz filter
for the 706 as well. The 706MKIIG is a fine little radio. If it were
not for the 9KHz filter in AM mode I would be 100% satisfied with it.

Hummm, myself I think the SWL with the rig is pretty good. but I like a wide filter for SWL. You get much better audio quality. The built in AM filter is 8 kc. Pretty wide. Again, I like this myself, but you evidently like a tad narrower. I don't have any idea what would be available that is narrower and would fit the radio. Being as the stock ssb filtering is appx 2.4, I'd think maybe 6 kc would be about right if you wanted a little narrower passband. You might want steeper skirts on the filter. The stock 8 kc filter evidently is not too steep sided. I think the wide SSB filter "2.8" would be too narrow. I know it would be for my tastes. I haven't really noticed the problems you have with the heterodynes . I've done quite a bit of SWL here on many bands and haven't noticed a problem. But I'm also used to wide radios on AM so this may have a bearing. My "other" SWL radio that I also like is an old 1958 transoceanic. It's wide also, but the audio is great, which I prefer. I have narrower radios for SWL such as drakes etc with only 4.8 filters for AM and I actually prefer the wider 706 for most stuff. It has better audio quality. But I guess just what your used to. You might

look for a 5-6 kc filter, but I don't know if they make such an animal
that will fit in the radio. MK

Hi Jeffrey

welcome to the world of Motorola

the programming software that you have is too old compared to the radios software.

this is a common problem especially with Motorola. We have just purchased XTS3000 radios and from batch to batch the software was not valid.

not sure if this is "continual" product upgrade or a ploy to force you into buying the software upgrade service - BUT is dammed annoying when your in the game commercially and have to deal with this on a weekly basis some times.

sorry for the bad news but you need new software, I am not at work at the moment so can't tell you the latest version but it is later then 4.00.00. Mot has a web site that tells of the latest versions.

all the best

Rex

2631. Nokia RC40 S11G-A3

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-23 19:26:21 UTC
From: Philip Morgan <philm@buckden.demon.co.uk>
Message-ID: <6MEF6WAdlrl6Ewva@buckden.demon.co.uk>
Source record: 64057

I have a Nokia radio with the above reference on the front face. Over this face is clipped a front panel with the ref CU43. The panel has a display window to the left and various program buttons to the right. A short length of coax extends from the back for an aerial. Also on the back is a 44 pin D socket for, presumably, PTT, power supply, etc. The cable for this socket is missing.

Any Nokia/PMR engineers out there who recognise this unit and can give me any info on it including where I can get the missing cable?

Many thanks

Phil M0AXZ

I used to have an NCX-500 transceiver mobile with a Linear Systems transistorized power supply. Installed a magnetic latching switch filched from an H-34 stabilization system to be sure the radio went off when the ignition did.

Guess what -- the problem is now intermittent -- the worse kind of problem. When I clicked on a lamp plugged into the same wall outlet as the rig, it suddenly started working normally. Kept working all last evening, but when I turned it on this morning -- broken again. Just as before: no receive, no LED freq. readout, panel lights at about 1/3 normal brightness. If it is an intermittent voltage regulator, how would I find it without a service manual?

Have you checked the voltage available at the receptacle? How about the ground for that circuit? If turning on a light on the same circuit caused a change, I would start suspecting "supply" problems - the circuit or receptacle, or receptacle connections. Poor ground on a circuit can cause one leg of a 220V circuit, (What 110V is), to fluctuate wildly when the other leg gets a load.

Another ham who lives about 1/4 mile away from my QTH is apparently overloading my Icom 756pro with his signal. My station has never been this close to another ham before and I'm wondering if this is normal? Assuming he's running a KW should his transmitting show up from one end of 20 mtrs to the other on the scope? I don't want to say anything to him if it's just the facts of life.

Please reply directly via email.

Size really has very little to do with it Bob.. it's all in the design
and engineering. When short cuts are made, this is the result.

Hello,
I was wondering if anyone is willing tp trade a UHF MCS2000 mobile...
450-470 range 200+ channels I believe it has and in great working condition. I
am looking for one of the following units.

GM300 - VHF (AT LEAST 32 Channels 140-160MHz or so range)
MAXTRAC - VHF (AT LEAST 32 Channels 140-160MHz or so range)
CDM1250 - VHF or UHF (16+ channels 140-160MHz or so range or 440-470MHz)
SPECTRA - VHF or UHF (16+ channels 140-160MHz or so range or 440-470MHz)

If you want to make the deal please let me know....

Hello,
I am looking to install all my Motorola gear into my Acura. I need a mobile radio mount so that I can install at least 2 motorola radios in my vehicle. Basically the same type of mount local PD's use to install their radio's into their vehicles. If you have one or know exactly where to buy one I would really appreciate you emailing me back on this.

Thanks for your time and hope to hear from you soon.

Jeffrey - N9MXT1@AOL.COM

If all else fails, take measurements and bring them to a local metal working shop.
they can have brackets made during "brake" time!

I don't keep up with this newsgroup on a daily basis, probably more like every couple weeks due to my work schedule. After reading this one though thought I'd better respond. Not sure how long ago it came in but I had a very bad experience with Texas Towers when buying a Yeasu FT 100-D. You'd think that after paying over a 1000 clams for something that you could expect better than "very" rude behavior from the salesperson. The red flag went up in my brain the first time I spoke to him, he was a little curt, but the other salesman had been so nice that I kind of pushed it to the back of my mind and figured he might be acting that way because I was a woman. Then after purchasing the radio and paying over 50 dollars to get it overnight, it didn't come in until Monday. I wanted it for the contest that weekend. I had payed $30 for over night and didn't get it. I also did not get the extra back. He flatly told me he had made one call to ups and he was not wasting anymore of his time calling again. Mind you I had just spent quite a bit of money. I told him that was a pretty bad attitude to take towards a customer and he wouldn't get anymore of my business if he wanted to act that way, his answer to me was I don't want any more of your business. Since then have had several reports from others of similar bad experiences so you might try another source for this antenna if you want one.
After that if you get it I'd love to hear from you how it works out. We have thought of buying one for similar reasons. Sorry so long, Thanks, 73' Kathy AC4LB

Hello Mark. Yes, the wide filters sound great for strong stations however the lack of selectiviity really hurts when I am
listening to a weaker station and a strong one 20KHz away is clobbering it. In this situation using my Sony 2010 portable I
cannot even tell the station 20KHz away is there! I used to use the 2010 mobile to listen to the BBC, etc. and figured the 706
would let me put that nice portable in the house and allow me to do some SWLing or hamming while mobile. Whichever suited my
fancy. I agree that it sounds nice listening to stronger stations. I suppose that I was expecting better for my money. I was
hoping someone somewhere had designed a better filter for the radio and was hoping that by posting here I would find an answer.

Take care,
Al

The problem develops when you turn the key. As it goes through the
normal running position, it momentarily applies power to the radio for
a split second, then off again while the starter is turning. This
momemtary shot of power can really cause havoc for microprocessors.
The solution: I installed a timer which basically waits 15 seconds
after power is applied to it (via the accessory tap on the ignition
switch). It then applies power to a heavy duty 'A' relay under the
hood which switches A+ power to the radio. Never had a glitch or
problem using this method - the radio is entirely controlled by the
ignition switch so I don't have to worry about forgetting to turn on
and off.....

Sam,
This guy who is selling these amps is a CBer,
if you check out his post you will see the FIRST time he posted
these amps for sale was on the CB news group. they are NOT type
accepted and cheap made junk.Also you will be supporting a person who
has no regard for our hobby by selling this junk that has no spectural
purity what so ever.My opinion is steer clear.
Donnie

Perhaps it is *WE* customers who are to blame for stories like this - the store management pay LOTS of money in advertising and stock, and to have their efforts spoiled by an arrogant salesperson with a personality problem is unacceptable! When this sort of thing happens, we should call back and ask for a manager and complain about our treatment in a calm and tactful manner. The first complaint or 2 might not stimulate serious action - after all, ANY of us have our bad moments - but if reports of poor theatment by the same jerk salesman keep coming in, action WILL be taken for sure! For the record, *I TOO* have always had excellent results with Texas Towers...

There's an EXCELLENT article in the recent issue of QST on using your
receiver intelligently - I've lost count of the times I've had guys
break in complaining that I was "splattering all over the band and
broad" - and when asked if they by chance had their noise blanker on,
respond that yes they did... I then suggest they switch it OFF and check
my signal again... MOST of the time, they have sheepishly returned and
admitted that after turning theit NB off, my signal was still as strong,
buy was now clean an narrow as it should be. Problem was, and IS, far
tto many guys just don't know how to operate their receivers, and when
they encounter a condition they are bothered by, immediately ASSUME the

OTHER guy is creating the problem when he is NOT! SURE, I want to run a clean station, and frequently run checks to assure myself it is - so usually I can be pretty certain that negative reports are likely to be operator error or unusual conditions on the OTHER end of line, not mine.

I have no
> problem with responsible use of power but, when someone has to have the "Big
> Radio on the Channel". Then I personally do.

Personally. I find that *I* rarely am good enough a mind reader to actually *know* what motivates other people to do the things they do - hell - sometimes I'm not too sure about MYSELF! It's a pretty big (and arrogant) stretch to ASSUME why some other ham is operating the way he is - unless he comes right out and SAYS why!

>
> That's my opinion and I'm stickin' to it.
>
> lak
>
>

The notion - and FCC requirement - that "minimum power" be used for maintaining contact is understandable - and *I* wish it were always possible - but MANY times, I am in contact with a relatively LOCAL station on 40 or 20, and we ragchew while waiting for some of our more distant friends to check in who of neccessity running low power or mobile setups, and who we would NEVER hear if the frequency gets cluttered because OTHER stations see OUR frequency as a weak spot and move in closely alongside or on TOP of us. We found out LONG AGO that trying to run down in the 100 watt class while we wait for our buds to arrive is asking for disaster - so even though WE don't need the higher power between us initially in our contact, it is frequently the ONLY way the frequency can be maintained well enough to permit our weaker friends to be heard as they join in. Now, some can (and WILL!) bitch and moan about power being used as a "frequency sweeper" or defensive weapon, but we choose to operate our stations to maintain contact with our weak and distant traveling friends JUST as much as we do the stronger closer ones! If we can/could do that reliably with low power, GREAT, but past experience has well proved that to NOT usually be the case. MANY times we have TRIED to establish and maintain contact with low power, only to be soon forced to flip on the amps, or else lose contact with the weaker stations in the group due to being crowded by interfering stations who have moved in too close to us for us to continue otherwise. And NO, the problem is usually NOT because those interfering stations are ALSO running too much power - it's frequently just because of propagation and the fact the those interfering stations aren't hearing some in our group because they are too WEAK. and think the frequency is clear, or that the stations they DO hear are far enough away that they won't interfere. So yes, *I* have both good antennas AND amps - and usually manage to make

and maintain contacts on my terms, not those forced on me by someone who is unconcerned about forcing their way onto a frequency they see as the weakest hole in the band. NO, I'm not saying that's what *I* do either - we always check the frequency, and ASK if it's clear before we begin our contacts - but some folks don't, and band conditions do change - and like it or not, sometimes ham radio is "survival of the fittest" - and too often in our case, the "fittest" isn't the one with either the best antenna OR the biggest amp, but the one with BOTH!

NO, you DON"T have to choose between one OR the other - you CAN have BOTH!

NOW, I've stated my opinion in as tactful and open a manner as I know how - so rather than someone attacking my points in an abusive and personal manner, how about re-reading it in an objective way, and TRY to understand the viewpoint presented on face value...

Thanks for the heads up!

Such boorish sales people, I am afraid, can set me off pretty badly. That just happens to be one of the "buttons" that *can* set me off. I once called a local attorney's office looking for my own attorney. Instead, I got a particularly grouchy old buzzard who was, in the absence of my normal lawyer, filling in--and VERY unhappy about it. Upon asking very politely some questions, I felt I was under assault by a boar HOG! He was VERY rude, condescending, and even took a threatening tone with me as if he was quite put out because I disturbed his nap(?). I asked him, "Sir, are you having a bad day?", to which it sounded like I was assailed by a junk yard dog--ARF, ARF, ARF, WOOF, GROWL!!!

I hung up the phone and I felt it start. A feeling that begins almost in my feet and, like Old Faithful, rises to the top of my head! I was shaking like a leaf! Not from fear, but from RAGE! I grabbed my jacket and made for the car. I drove uptown and parked the car, then went into the offices of these attorneys. I was still mad, but not like I was at first. But I walked right into the old geezer's office, brushing past the secretary and I pointed my finger right in that old SOB's face and told him this: "Mr. Whitesides, if you worked for my corporation and even looked like you were going to talk to a customer the way you just got thru talking to me, you'd be out on your keister within the hour! Next, if you EVER, EVER talk to me like that again, you old buzzard, you had better file a flight plan because you WILL go on a short TRIP. I WILL bust you right in the mouth and send you skidding across the floor! You have an alligator mouth and a canary a**, and you're fixin' to write a check that canary a** can't cash!"

The old guy was rigid against the back of his leather office chair, knuckles whitely gripping the arms. I scared the dickens out of him! All during this diatribe, all he coud say was, "WHA--, WHA--, WHA--!" I also reported him to the local bar association which put a black mark on his record.

Now that WAS an ugly exchange that I probably shouldn't have engaged in. But. you know, that lawyer has been exceptionally nice to me ever since! LOL!

Best,

Jerry

As popular as the 706 is, I would think someone would make one eventually. One problem is making one small enough to actually fit into the socket. Some are too high etc. There may be hope eventually as some like to use these rigs on AM, and there may be a demand for a narrower AM filter. I don't know how the ft-100 fares on AM-BC. Haven't really seen anyone mention it. I have a friend who has a ft-100, I'll have him about it when I get a chance. I don't know if the AM is wide or narrow in it's stock form on the 100. Icom oughta make an appx 5 kc filter for it, but I guess they think they wouldn't sell enough of them. I see people enquiring about them for ham AM use.It's possible you could have one custom made. In fact I think you can, but I bet it wouldn't be cheap. What the companies usually do in a case like this is require a minumum order. Say 10 as an example. So you would have to round up a bunch of people to also buy and split the costs of making the filters.

2687. KWM-2, 30L-1, 312B-4 Learning Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-24 19:42:17 UTC
From: K6SDE <k6sde@my-deja.com>
Message-ID: <3A980E99.3C555593@my-deja.com>
Source record: 64112

If you are a KWM-2 owner you may be interested in a copy of a manual
that I found some time ago.

It's great for those who aren't used to operating and using vacuum tube
gear and has a complete sequence of lessons on how to connect and
operate the KWM-2 and also the interconnection and use of it with the
30L-1 amplifier and 312B-4 Station Control if you also have those items.

$7.50 postpaid if you're interested.

For more details and an example of a page see:
KWM-2 Learning Manual

Source record: 64113

I have for sale a Yaesu Quadra linear amp. This is a really nice amp that I bought to go with my FT-1000 MkV, but I have decided it's overkill and I could use the money elsewhere. It is absolutely perfect in all respects. I used it for less than 30 minutes of operating time. Original cost was $3800. I'd like to get $3000 for it.

Thanks,

Marv

> annoying.

1.5 KW is the limit here. And 3 kc is the maximum bandwidth allowed. I'm
curious, why do you think running an amp makes a signal wider? if this
was the case, everyone running an amp would be illegal. I got news for
you, the "perceived" wideness you see is a limitation of your receiver
filtering, not because someone is running more power. You can run 50KW,
and if your signal is only S5 on the other side of the world, you will
"appear" to occupy the same bandwidth as a 5 w station 10 miles away
that is also S 5 on your receiver. If I run 100w, but pound your radio
with a 40 db over 9 signal, I will "appear" wider than a 10 KW station
that is only 20 over 9 to you. In actuality, both are appx the same
width of signals. If one was overly wide, they would naturally be
illegal. But they aren't. They just seem that way to your receiver. A
properly tuned amp does not cause a signal wider.

I had a QSO after calling CQ with a guy about 100 miles North of
> me on 40 meters, he was running 1.5 KW output at the start of the QSO, after
> shutting down his "foot warmer" he only dropped from 10 dB over S9 to S9. He
> was splattering all over the place before and reduced his bandwidth and
> readiablity by factor of 10 after pulling the "big switch".

Sounds like he needs to learn how to properly load an amp. If he was
splattering, he most likely was underloaded. A properly tuned amp does
NOT cause splatter. Only an improperly tuned amp will cause this.

I have no
> problem with responsible use of power but, when someone has to have the "Big
> Radio on the Channel". Then I personally do.

Myself, I only run what I need. But I have no qualms about firing up
1000w if I need it. But you will never hear me splattering ever! I
always fully load my amps if I'm going to use one. MK

Hi:

Tried of being Stomped on? Well, this is the last of the UHF 100 Watt+ Motorola Radios that were made which are fully programmable. I also have made some changes to make addressing the radio to work in the 440.000 Range as well for Ham Use as well as Commerical and will supply the information with the radio.

With a 3 or 5 DB Gain Antenna, makes this one of the best radios Motorola ever made.

Anyhow, comes with a Digital Control Head, Mic (Like New) Control Cable Speaker, and all needed hardware.

I took the top cover off so you could see the guts of the radio. Control head can be seen in the back

Will also program it to your needs up to 15 channels

Photo can be seen @

This is a weird thread, just shows the Law is an ass regarding this matter, I believe that you have US Police Radio Traffic available on the Internet?

In the UK, according to the Amateur Radio Licence Terms, Provisions & Limitations Booklet BR68, and the Wireless Telegraphy Act 1949, it's illegal to listen deliberately, but if you hear anything by mistake you shouldn't tell anyone, or retain a copy of the message, because that is illegal too.

The only person you can tell is 'an authorised officer of Her Majesty's Government or a competent legal tribunal', but to get to that stage you must have told someone who was not authorised, such as a Police Officer, who would then have handcuffed you for telling him.

This little lot would seem to rule out UK Police Radio Traffic on the Internet.

The idea seems to be that it's all a mistake, and as you never heard anything and/or never wrote anything down, I can't see how anything you then said to an authorised person would stand up in Court.

The Police have better things to worry about in the UK, I've only ever heard of criminals who have been charged with serious offences ever charged with the use of 'a hi-tech Police Scanner', (BBC News), so the whole point is mute.

They know some Radio Amateurs listen to them, but they also know that they rely on us to provide (RAYNET) emergency communications for them as a User Service.

I would like to hear how you eventually got around the problem in Michigan though?

Yes:

We have found a few more of these 16 Pin ==>[Blank]<== Logic
boards for the Motorola MAXTRAC, DESTRAC, RADIUS, MARATRAC
Mobile Radios. 9913 series

Please note, these are NOT the same as the GM300 Series, but
I have a few of those too for 30.00 extra.

All have the 16 Pin Acc'y Connector, Ver 5.34 Firmware, and are
packed in the Factory Anti-Static Bag for protection

So if you have a Damaged or Corrupt Logic board, or just perhaps
desire to Upgrade your radio to 32 channel operation, this is the trick
item to have. Also has the Ver 5.34 32 channel Eprom already installed
and comes simple "Step by Step" instructions on "How Too" if you
need them

$135.00ea+ 8.00 for shipping and handling (pirority mail, insured, w/tracking

Can anyone please give me information regarding where I can find anything regarding Yupiteru radios. I recently spoke with a friend of mine who travels extensively, and he mentioned the Yupiteru name and I was interested in finding out more about the company and their products to see how they stack up against other companies like AOR and Icom. The search I've already done has not given me very many satisfactory sites to go to. I gather that the radios aren't available in the States, but only from Asia or Europe.

If anyone has a Yupiteru, or knows someone that does, I would be interested in chatting with them via e-mail. From what my friend said, they sound like interesting radios.

Thanks.

Tom, you're missing the point and you obviously have someone who is very unhappy dealing with you. Pure and simple, make it right. Give him back his money, regardless of how he talks to you, and get your radio back. Then sell it again. If the radio is in good condition, and you should have packed the radio properly before sending it out, then you should have no problems selling it again, either over the Internet or at a local hamfest. I've seen several R71A's for sale at local swaps, and they have gone quickly, so the market is definitely there.

IMHO, we are all Ham radio operators. What sets us apart from the general public, other than our hobby, is our willingness to work with each other so that we all get the most satisfaction from our hobby. That means taking the radio back and giving this gentleman back his money, in full, so he can continue his search for another radio as soon as possible.

That's all there is to it, plain and simple.

<< My Kenwood TS-690SAT suddenly refuses to transmit. Is there anything I should check before I pay for a ride to Kenwood and back? >>

Keith-

One thing to look for is connectors on the back of the TS-690 that would be used for a transverter. It is my understanding that external transverter circuitry is internally bypassed by a switch, which is opened when a transverter's mating connector is attached.

Sometimes the switch contacts in the normally closed switches become oxidized. If this happens to be your problem, the solution is to find one of the connectors that probably came with the radio, and use it to exercise the contacts by repeatedly inserting and removing it. In theory, wiping action will clean the oxide off the contact surfaces, and the radio will again transmit.

You might check Sherwood Engineering at
http://www.sherweng.com/index.html

They make a 5.something khz AM filter for one of the high-end Icom
receivers that has lousy AM reception. Don't know if it would fit a
706, but it might worth asking about.

Good luck...

Source record: 64126

This reminds me of a good friend of mine who first got his license in 1953. He "came up" with Collins KW1, 51S1, KWM2, etc., not necessarily all Collins stuff. But he never liked ANY of the newer gear--especially the mini-rigs. HAARUMPH! That new stuff is "crap". But he'd never tried it, either. Not too long ago, his mobile rig died on him, so I loaned him an Icom 706. When he got used to it, it dawned on him just how nice it was having all bands (except 440) in one neat little package. Now he wants the MKIIG since I demo'd the DSP and additional features.

The point is, basically, that ALL rigs are going to have something that a given operator won't like. It's why there are different makes just like cars. Some are going to find something wrong with new technology simply because it wasn't done that way in 1950. They are stuck in their past and resistant to change--like my friend. That was the ONLY reason he didn't like the 706--it wasn't "done" that way in the old days. But once he saw the advantages, he just has to have one!

I LOVE my MKIIG, I use it on SSB, AM, and CW. It also meets certain extra requirements for NTIA that the FT100D will not. I listen to quite a bit of SW stuff such as the transatlantic stuff on 6604-6628, for example. I have not noticed the difficulty being experienced by the original poster. I installed it in a '93 Lumina Z34. It is as quiet as a mouse--no ignition pulse or alt. whine. The only thing I hear is the fuel pump IF the rig is on when I first turn the key on and pause to allow the pump to do its thing. I hope to purchase another MKIIG in the near future for my base station--fits really neatly in my radio console!

Such attenuators do exist. I have in the shack a 0-100 dB
attenuator in 1 dB steps. It was manufactured by Pascall, UK, about
5 years back. I forget the price but it was quite expensive. Don't
know whether the firm still exists. Built into a solid die-cast
aluminium-alloy box.

Cable leakage does not increase with frequency - it decreases.
Worst of all at DC and audio frequencies. Leakage occurs mostly at
connectors. Use threaded types, not simple plug and socket.
Impedance mismatch at connectors is no problem with attenuation
measurements.

I have made measurements up to 160 dB at up to 5 MHz by comparison
with variable attenuators. A 10 watt signal generator is needed.
Without any extraordinary precautions it is possible to make
measurements with an uncertainty of a few tenths of a decibel at
100 dB.

I have also made measurements with a precision of 0.001 decibels at
frequencies up to 10 MHz. Such measurements are necessary to
determining the loss vs temperature coefficients of components and
systems when it is possible to vary the temperature only a few
degrees C. A high precision is also needed when calibrating field
attenuators against laboratory standards.

I have to agree, UPS is terrible and getting worse. They lost a package I sent overnight to my daughter. They could not locate it. It was insured. I told them, well you lost it so pay me. They told me they had three weeks to find the package before they would pay. I said if my daughter could wait three weeks, I would not have sent it overnight express. In a nutshell after days and hours of calls to their headquarters, they agreed to pay. Within two weeks they did find the package. But, I do not ship UPS anymore, I ship with FEDEX. They're not perfect, but when I have had problems, they have remedied the problem right away. Problems will occur at times, but it is how you handle the problems that make the difference. Request that the shipper use another carrier instead of UPS until UPS learns how to treat their customers.

Message-ID: <20010224210940.24293.00002884@ng-mc1.aol.com>
Source record: 64137

How is the PK-232 MBX different from the regular PK-232? Does it have TDM and other modes not in the original?

Thanks

Reg

Dual Band Amateur Ham Radio Handheld
EBAY AUCTION Item #1216996273

For Sale : MAHA-REXON RL-501 with 200 channel memory, Dual Band ht 2mt/440mhz with MAHA's NMH High-output battery pack. Last for aprox. 14hr of listening to the local repeater. I have the original box, packing and owners manual along with the ac charger and a custom leather case, and a speaker mic that I will include in this auction. Has seen little use, mostly during field day. I am selling to upgrade to the new APRS handheld, as I enjoy that aspect of the hobby more theses days. The unit is used but clean, small marks on the original antenna where the speaker mic was clipped for storage, but unharmed in anyway. I would rate this unit a 8 out of 10 on the looks scale, and a 10 for opperation. As with any used gear I will not accept any returns or refunds, and this unit is sold without any warranty, but I will state that this unit is fully functional on my desk as I place this auction listing.. I AM A PAYPAL VERIFIED Seller, I would like the winning accepted bidder to use PayPal with Visa or MasterCard etc.. much Quicker and it protects you against fraud, but will accept money order / certified bank drafts, No personal Checks. Buyer to pay Fixed S/h of $10.00. US Bidders Only. I reserve the right to offer to sell to the next highest bidder if the winner has unexceptable bad feedback Rating.

One thing I do is change the monitor to a different display pattern... It's very interesting, turn your radio volume up and chnage the screen to a DOS window and the noise dissapears... if you need your computer during radio, this obviously own't work... I would buy a good video cable and put a few RF chokes on it to pull down some of the real high transitions....

Good luck, Michael K3MH

2726. FS: Ten-Tec Omni D, version B

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-25 06:52:43 UTC
From: dslosty@pipeline.com
Message-ID: <3a98ab58.7099551@news.pipeline.com>
Source record: 64001

For Sale: Ten-Tec Omni-D, version B transceiver.
Incudes the original model 252Mo 12VDC, 18 amp
supply, also the audio CW filter but has no xtal
filter options installed. The Ten-Tec model 217 (500Hz)
and model 218 (1.8KHz) optional filters are still available
from Ten-Tec.

I've added the Ten-Tec WARC band kit for 30 mtrs
but xcvr doesn't have 17 or 12 mtrs.

The unit is in excellent working condition with an
almost perfect front panel.. Asking $350 plus shipping.

I've used the rig for a couple of years. It's great
on SSB and QSK CW. However, I've got two more
Ten-Tec rigs and this is a duplicate that I don't need.

73,
Doug/WA1TUT

I like mine so far. I haven't noticed too many of the AM problems, but
I'm not untra picky in that dept. But overall, on most SWL stations, it
seems to sound fine here. I am using 440 ft of wire for an antenna
though. "160,80,40 dipoles on one coax". It is a little broad for hard
core SWL dxing, but I'd rather start out broad and have to add
filtering, than start narrow and have no chance at decent audio without
butchering the default filters. Many of the other ham rigs that cover AM
are this way. The audio takes a cut with a 2 x 2.4 =4.8 kc filter as is
stock in some ham rigs. But I disagree on your choice of base rig. I
think you oughta try a 746..:) I hear they are pretty good little rigs.
No UHF, but does have 100w on 2m. But on HF , it's pretty good with the
twin PBT etc. Probably a good bit better than the 706 for hard core HF.I
think I'm gonna try one for the house when I find a good deal on one. I
got the 706 about 75% for the receiver. I like having a radio I can
listen to nearly anything on in one box. I use for ham use of course,
but also aircraft, police, etc, etc. It's very sensitive on most bands.
Or much better than my scanner anyway. With it's fast scanning rate and
better receiver, it's a better scanner than my scanner. :/ MK

I guess that it must be quite expensive if you really get such
accuracy as you later claim, even in a controlled constant
temperature.

I also suspect that the VHF/UHF performance is not that spectacular
and since the original poster did not specify the required frequency
range, I originally asked about it.

>Cable leakage does not increase with frequency - it decreases.
>Worst of all at DC and audio frequencies. Leakage occurs mostly at
>connectors. Use threaded types, not simple plug and socket.

DC and audio circuits generally have a much higher impedance levels
than 50 or 75 ohms used in RF circuits, so the capacitive coupling is
a much worse problem. At very low frequencies the coaxial cable does
not work properly as a transmission line, thus the isolation is not
very good. However, due to losses at very high frequencies, the shield
no longer act as a perfect conductor and you can get different
currents flowing on the inside and outside of the shield.

>I have also made measurements with a precision of 0.001 decibels at
>frequencies up to 10 MHz.

I guess that must be the readout resolution in some comparative
measurements but not an actual precision. A 0.001 dB voltage ratio is
115 ppm (0.015 %), so I wonder how this accuracy could be maintained,
especially if some real power levels are involved heating the
attenuator.

What do you mean "As with any used gear I will not accept any returns or refunds,".

Since you apparently don't know the difference between For Sale and For Auction, little else you have to say has no meaning.....

Absolute accuracy should not be confused with precision.

To measure attenuation within "a few tenths of a dB" (at any attenuation level) entails detecting a difference between two voltages which are a few percent different from each other. This is an easy job for any voltmeter. Errors are not due to the comparing voltmeter but to the measuring components, cables, connectors and layout.

Accuracy entails comparison with a local standard. There will be uncertainty in the local standard in addition to errors introduced during the comparison process. There will also be uncertainties introduced at each calibration level up to the International standard.

Precision is related only to local effects such as signal to noise ratios. It is relatively easy to detect a difference of 10 microvolts between two voltages of about 1 volt each. This corresponds to a precision better than +/- 0.0001 dB

Look in your Yellow Pages under Business Radio, find a local shop that
sells Motorola radios for commercial use, and see what he might have
in stock, or be able to order for you. They might be able to order the
exact PD mount you're looking for.

Just wanted to correct a few things.....

Motorola did not sell the crystal controlled product line to Dataradio, Inc. The RNet 150 is a crystal controlled unit. In fact, Motorola had to discontinue the crystal product line prior to the sale due to the limited availability of key components. Only the synthesized portion of the boxed RNet product line was sold to Dataradio, Inc. Dataradio, however, does offer compatible product.

The RNet 150 has been superceded by the JSLM RNet VHF which was designed to meet much higher performance specifications. The link in your post references the JSLM RNet VHF specifications.....not the RNet 150 specifications.

The JSLM RNet is available at VHF and UHF frequencies and is a drop in replacement for either the crystal controlled prouducts or the frequency synthesized telemetry products that Motorola used to manufacture.

The new JSLM RNet is available in either a 'pre-farmed' or 're-farmed' (11K0 emission designator) version. Anyone needing a drop in replacement for the RNet 150 or the RNet 450 telemetry radios can obtain one from Dataradio....the JSLM RNet is it.

>
>Paul OH3LWR
>

Hi Paul,

Precision, Resolution. These can be the same thing or different;
however neither are a statement of accuracy.

When my old Drake TR-7 VFO gets buggy, I might note some one at
47.1652 MHz and smile at the precision of that reading, and yet it is
off by 40 MHz (an errant 4 is showing). Lots of precision, lots of
error.

However, as your question lies dormant:
> I wonder how this accuracy could be maintained,
>especially if some real power levels are involved heating the
>attenuator.
which is a concern shared by any metrologist. The load is the
defining point of a power measurement. The load must be known and
with power applied - it changes.

The first, and simplest, solution is to over engineer the load's
ability to "DISSIPATE" energy. (sorry to scream in your ear, but
others here needed to hear that) That would suggest using a 100W
continuous service Dummy Load to measure 10W period limited power
measurements. Or simply measure the load under the power applied.

Attenuators, on the other hand, are not 100W and few are 10W devices.
Most are on the order of 0.1-5W. So, I presume you wonder how to get
one of these into the signal path of a 100W rig? You use a
directional coupler to tap a portion of the power (and you need to
know the portion, but accurate determinations are fairly simple) and

feed that tap through the attenuator and add the coupling loss (or that portion) to make a total.

In short, you have a 100W Source, a 100W Load, a 20 dB Directional coupler, a variable attenuator, an attenuator Load (how many miss this one?) and a detector. You can now read applied power at a 1W level instead of the 100W level. And you can measure the variation from that level with reference to your 100W reading to the resolution of the detector. Resolution or precision could run quite high. A measurements of change would also find high "relative" accuracy.

Relative accuracy means you do not need to know where you are, or where you started in absolute terms, merely how far apart they are. There is an interesting implication here in this subject. As we are interested in attenuation, any measurement of an attenuator is both "relatively" and "absolutely" accurate. This is one of Gary Peach's link pins to the absolute measure of received power.

2749. Desk mic with an HT HELP

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-25 20:10:14 UTC
From: Frizz <none@none.com>
Message-ID: <97bokj$k1u$1@bob.news.rcn.net>
Source record: 64023

This is gonna sound crazy but I actually have been doing this for the past couple of months. I had my D104 silver eagle desk mic wired ot my Yaesu FT-411 HT. All was working fine but I just had wires stuck in the existing 5 pin plug to connect to the radio's mic connector. So I went and bought a panel mount 5 pin connector and tried to rewire everything to be a little bit more stable. After doing that, the mic will key the radio but I can't get any audio out of it. This is the same wiring as before just with a connector and now it won't work. So what I need help on is a way to rewire all of this. I need to keep the 5 pin plug on the mic, however, so won't be able to get rid of that. Any suggestions? I am using this thing as a base and this is the easiest way to talk on the radio while it is hooked to the antenna and power supply. Any help is appreciated. Thanks!!!

2757. FS: Astec LPT42 Switching Power Supplies

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-26 00:44:55 UTC
From: gmonson@mail.com
Message-ID: <bGhm6.5227$SG.998609@dfiatx1-snr1.gtei.net>
Source record: 64032

For Sale:

I have 50 Astec Model LPT42 switching power supplies available for immediate shipment. These units were purchased for use in an industrial process control application, but were never powered-up. The specs are as follows:

Input Range: 85-264 VAC or 120-370VDC
Frequency: 47-440 Hz

Output #1: +5VDC, 4 A max load with convection cooling
Output #2: +12VDC, 2 A max load
Output #3: -12VDC, 0.5 A max load

Physical dimensions: 5.00"W x 3.00"D x 1.14"H

I would prefer to sell all 50 together, but will consider selling smaller quantities. If interested, email me at gmonson@mail.com.

Secret Weapon against UPS...

Spend the 40 or 45 dollars to sue them in small claims court. They will usually settle immediately (make sure you get the money for filing, too)...or they don't bother to show for the hearing, and you win by default. (the court costs are added to the judgment).

I've always had the judgment paid promptly.

I did. however, once work for a company who was not paid for the judgment...until they got an order from the court to seize escrow property. It is truly amazing how fast the will settle when the sheriff slaps a 'boot' on one of their trucks.!

>

Let me make a comment here, just so you are aware. I've owned both mikes for the IC-706, and the stock mic is far superior audio-wise on SSB, while the DTMF mic performs better on FM. Beings that I operate primarily HF SSB mobile, I traded my DTMF mic back for a stock mic. Just so you're aware.

>Great radio check it out e-bay #1216532240

I do not fancy myself a NG cop, but please use FA in the subject title when referring to auctions. Speaking of auctions, just for laughs, check out eBay # 1217541141 - It's a Kenwood TS-450S (NO TUNER) starting bid of $1,400...and RESERVE is NOT MET...of course, 0 bidders. Duh! I wrote a friendly e-mail to the poster as it was obvious he didn't know what he had. It apparently came from his Dad, a SK. I see he now has written a note at the bottom saying is is cancelling the item after finding out the price he is asking is not reasonable, Hi Hi...

There is an icom 706 mark 2g AM receive mod to fix this problem, but it involves using the FL-102 filter and cutting surface-mount traces, so I didn't bother. I can't remember where the info is. check www.mods.dk.

2785. North Shore RF TECHnology VHF duplexer?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-26 09:30:50 UTC
From: Stein-Olav Lund <Stein.O.Lund@iet.hist.no>
Message-ID: <3A9A224A.3459F8F1@iet.hist.no>
Source record: 63960

Our ham group has a 6-can duplexer for the 2m band (type 62-3)
I have tried to find the company who made it on the internet
without success.
Also there is a problem: The two coax lines from the antenna T-connector

to the RX cavities and to the TX cavities are missing. The lengths of
these
are very important as they transform the filter sections' impedance to
the
antenna's 50 ohms.
Can anyone out there please help with this info?

Remember that the PK-232/MBX may have any one of several EPROM versions.
There were at least 3 upgrades which gave the unit Pactor capability. Some
of these upgrades were significant bug fixes.

2794. Need help - Grounding problem with Midland CB

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-26 16:51:26 UTC
From: Jeremy Henricks <info@theoutdoorlodge.com>
Message-ID: <MPG.1504296d1805274b989682@spamkiller.newsfeeds.com>
Source record: 63969

Hi,

I have a Midland Model 77-115 Weather Max III, and I believe there's a grounding problem.

All connections - ground, coax, and power - have been checked. When I turn on the radio, I hear nothing. However, if I squeeze the top and bottom of the radio together, the radio begins receiving. When I let up, it goes silent again.

I took the radio apart to see if there were any broken solders, but I couldn't find any.

Has anyone heard of this before on these models, or have any ideas of how to fix it?

If you need more information to help answer my question, please let me know.

Thanks,

Jeremy Henricks

I have an old ZEOS Notebook 386 that developed dead batteries when I did not keep them on trickle charge. I carefully cut one of the 2 open and found that the batteries were standard 1700 mah cells that can be be obtained from various nicad sources and soldered together. I can sometimes restore the batteries if not hard shorted by zapping them, but zapped batteries never perform well after zapping, and must be kept on constant trickle charge as you can see from my webpage at http://www.ultimatecharger.com

Dear, Radio Newbie...

Get in touch with the Federal Communications Commission in Washington,
D.C., and tell them you want a radio that allows you to overhear phone
conversations. Fax them a copy of your driver's license or I.D.
They'll give you all the information you need.

Good luck!

Help! I need to raise some cash for a new rig, so my 737 has to go.

This near mint condition (has some dust and fingerprints on it) Icom 737 operates SSB, CW, AM, and FM. It has the auto antenna tuner, dual vfos, split operation, band pass tuning, notch filter, 101 memory channels and much more. Output power is variable from 10 to 100 watts on SSB, CW, and FM and 10 to 40 watts on am. This is from a non-smoking environment. Comes with the original hand mic with up/down controls, power cable, operating manual and optional service manual. Will come packed in the original Icom boxes. I will ship for $625 anywhere in lower 48 states. You can check out my feedback rating on eBay under the user id "kabeezy".
Thanks for reading this.

On the large and small plugs of a Yaesu HT type speaker mic, what do the ring and tip do on each? I realize the larger plug would just be audio but what about the smaller? Thanks!

2809. Re: Icom 706 VS Icom 706 mkII ??

I don't know how much the DSP costs, but I'm not sure its worth it. The problem is, the DSP is in the AF stage not the IF stage like it should be.

Skip the mark 2 and go for the 2G. It has backlit keys and it's significantly easier to set up repeater splits, and it comes with the DSP installed. And, you get 50 watts on 2m and 20? on 440, which no other 706 can say.

2810. KWM-2, 30L-1, 312B-5 Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-27 04:05:37 UTC
From: K6SDE <k6sde@my-deja.com>
Message-ID: <3A9B2790.C110C000@my-deja.com>
Source record: 63986

ilitary equivalent of the above units. It appears to be to train the "average soldier" to be able to hook up the rigs and properly tune them to receive and to tune the transmitter and amplifier without flattening the output tubes.

For those who need a refresher or who have come into amateur radio in the solid-state era this is an easy way to quickly get up to speed on using the equipment. It might just save some flattened 6146s and 811s or 572Bs!!! It certainly will help you become more comfortable with tuning the gear and operating it effectively.

I'm trying to recover some of my costs of purchasing the manual and at the same time sharing the information.

For $7.50 I'll send you in the US, via First Class Mail, in a padded envelope a good quality copy of the manual, including the one foldout page properly copied on 11x17 inch paper. If you're interested, please let me know right away. I hope to have all the copies ready to ship by the end of this week.

See a sample of the material at:
http://www.geocities.com/k6sde/KWM-2_Learning/KWM-2_Learning.html

or if that got cut off this should go to the same place:

KWM-2, 30L-1, 312B-5 Manual

I apologize if this is a repeat of a post made a few days ago. My ISP has had some problems with the newsgroup servers and I never found the posts that I thought I made and have received no queries to newsgroup posts. I have had several people on some of the reflectors (lists) who want a copy so I'm sure there must be others out there.*

Hi Guys;
I have a bunch of brand new "Gates" brand 1300mah Sub "C" nicad cells, they come with No markings(except code) but are from a major NiCad battery supplier and he uses
them in his packs.
You can string them for a nice Nicad DC power pack for QRP work or anything for that matter, they can be used in some portable flaslights, drills, etc.
Price is $17 for 12 shipped Priority.

2821. Yaesu FT-901DM restoration (I)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-27 10:00:27 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3A9B7ABB.89380513@ctv.es>
Source record: 63997

Hello!

Well, another Restoration Series begins ;-)!. Hope you find it interesting to read.

I got a 'kit form' FT-901DM, comprised of the nacked and butchered rig (wiring mods here and there, loose wires, ...), covers, screws and some loose PCBs. Why somebody would buy such a 'set'???. I also asked same thing to myself, hi!. I think it is because of the thrill of getting back to life an otherwise landfill candidate.

As usual, first work was to clean things a bit, removing accumulated dirt. Then I was fortunate enough to get another 901DM (working and in very nice condition) from a local ham to be used as a 'master' to compare wiring. Without it, I would be still trying to figure where each wire belonged to. Anyway, if you have ever seen a 901 or 902, you know underchassis wiring is really complex so, thought it was easier to work with the master rig, it is still a difficult work. I noticed several curious things, as the completely removed (wiring included!) EXT VFO connector (I need to replace and rewire it), heavily modified power connector and power tranformer primary wiring, several loose decoupling capacitors and so on. And I found a damaged component, a 7812 IC was shorted. Luckily enough, I have always some 78xx regulators on hand and replaced it.

BTW, I had removed knobs, VFO, counter, front panel and all modules and cleaned every piece (including the VFO dials, which were really dirty; now they looked as new). So the rig was fastly approaching to a Heathkit, when it came from Heath ;-)

Once the wiring mess was straightened out (8 hours work!), I did some preliminary checks on power transformer inputs and outputs (resistance measurement) with all the plug-in modules and VFO removed, and all seemed to be fine. I was not too confident, as the only thing I knew the rig did was to break fuses... But, as I could not locate any evident trouble, I put a conservative 1.5A fuse (it claims for a 3A at 220V) and powered the rig. Splash!!!. Dead fuse. Fine. Perhaps it needs a 3A fuse because of the capacitor inrush current... let's try it. Zap!!!. Another gone fuse. No, there is still some trouble.

So I thought a bit and noticed that I had not checked HV circuit in detail. So I got out the power and driver tubes (forgot it first time) and checked resistance from plate to chassis. Zero Ohms!. Not good, for sure ;-). Tracing it back to the shortcircuit, I found that both HV 100uF/500V capacitors were shorted. So I got to them, removing a

couple PCBs and built a 'temporary' (you know, forever lasting) replacement with two 47uF caps each. I also checked the HV PCB to find that from six 470k resistors, three were open. So I replaced all of them (6) with new ones. Rectifier diodes seemed to be fine and I left them.

Then it was time again to kill a fuse ;-). I put a 2A job, applied power and... eureka, there is some light!!!. VFO lamp, hanging from its wires, was lighted. As all the modules were removed, I just could check HV (950V) and the power transformer secondaries, which measured all as they should. So I powered down the rig and added RECTIFIER C board. BTW, that board usually contains a metal can 6V regulator which, in my unit, was replaced by a 7806. But I read somewhere that this is an standard mod, so I left it. This board seemed to work fine (except for the 6V regulator, as the 8V input was not present, due to the RECTIFIER A board not present). So I added the RECTIFIER A board and checked all voltages, which were close enough to what the manual says.

Now I put, one by one, all the plug-in modules back. Carefully cleaned all the edge connectors (with a pencil eraser; this is a tip I learned some time ago and which works really fine) and applied some contact cleaner before inserting them. On the filter module I found an ugly mod: a Ge signal diode was replaced by a 600V Si diode!. So I got a Ge diode from my stock and replaced it. I found also a lifted resistor in another module and put it back to its hole. Then I put back the front panel, VFO, counter, knobs and powered the rig... What a nice looking blue dial!. But, which band is the counter showing?. 33MHz, a new one. I think mine is the only 901 with 33 MHz band, hi!. BTW, there was some noise from the speaker. It seems some oscillator / mixer is acting up...

But I left the rig that way, as it was 0:15 local time... All in all, I am happy as the rig is slowly coming to life. More to come as I work on it!

Regards,

JOSE

Sorry, the memory fails at this point. But if I recall it was just an
Octal connector, and the 110 VAC went directly to two pins. Open the
unit up and it should be real easy to trace the power connections. It
also had a couple of jumpers for the filament and HV connections so
the external DC supply could hook up to the same connector.

>What kind of mike do I need to use? impedance? Replacement source?

It was a crystal mike if I recall correctly, quite high impedance.
Radio Schlock might have something that would do as a substitute.
And if not, there's always one at a flea market.

> I understand the you would not want to start up the vehicle while the radio is turned on...but how about when the radio is turned off? >

That's fine. If you connect the radio directly to the battery, the power will never be interrupted from the radio but there's always a possibility of a voltage spike as the car starts. W7AZF changed a simple problem into a more complicated one which he ingeniously overcame. Some people have sex in a hammock just to prove they can do things the hard way. Try this.....start the car.....turn on the radio.

Probably the best bet if you have a limited budget is to check around for a used Radio Shack HTX-202. It has all the tones and memories needed for repeater and simplex operation. It is a modern rig that has a great record for reliability. I think nearly every Ham has had one of those HT's at one time or another. You should be able to find one that is 100% working for no more than $100.

One decent source if you don't mind bidding and waiting a few days is http://www.ebay.com I just took a quick look there and there are 8 HTX-202's listed up for bid. The range of current bids was from $51 - $100 To find them at that site just search on HTX-202

Welcome to the Ham community. I have some nice close-up photos of the HTX-202 on my site..... 73 / DX

Please show us how smart you are and quote the "false claims rule" of the FCC Rules and Regs, and enlighten us on how "local authorities" can enforce them. Don't waste your time on law school...you'd flunk out on the first day.

Dual Band Amateur Ham Radio Handheld
EBAY AUCTION Item #1216996273

For Sale : MAHA-REXON RL-501 with 200 channel memory, Dual Band ht
2mt/440mhz with MAHA's NMH High-output battery pack. Last for aprox. 14hr
of
listening to the local repeater. I have the original box, packing and
owners
manual along with the ac charger and a custom leather case, and a speaker
mic that I will include in this auction. Has seen little use, mostly during
field day. I am selling to upgrade to the new APRS handheld, as I enjoy
that
aspect of the hobby more theses days. The unit is used but clean, small
marks on the original antenna where the speaker mic was clipped for
storage,
but unharmed in anyway. I would rate this unit a 8 out of 10 on the looks
scale, and a 10 for opperation. As with any used gear I will not accept any
returns or refunds, and this unit is sold without any warranty, but I will
state that this unit is fully functional on my desk as I place this auction
listing.. I AM A PAYPAL VERIFIED Seller, I would like the winning accepted
bidder to use PayPal with Visa or MasterCard etc.. much Quicker and it
protects you against fraud, but will accept money order / certified bank
drafts, No personal Checks. Buyer to pay Fixed S/h of $10.00. US Bidders
Only. I reserve the right to offer to sell to the next highest bidder if the
winner has unexceptable bad feedback Rating.

-

On Feb-22-01 at 20:06:53 PST, seller added the following information:

I accept PayPal, the #1 payment service in online auctions!

On Feb-27-01 at 18:35:50 PST, seller added the following information:
Here is a link to the specs as per some peoples request for more specs on
this unit : http://www.maha-comm.com/rexon/rl501/index.htm Just cut and
paste in to the address line and all will be provided the information you
request. By the way the 800mhz mod/out of band mod has completed.

You can get a 5-watts-or-so handheld transceiver for 2 meters in the general price range of $170 to $250 from Icom, Yaesu, Kenwood, ADI or Alinco. They all have web sites you can visit. Hard to recommend one over the other. They're all good brands.

You can go cheaper if you bid on items on eBay, but you never know whether you're getting a handheld somebody's dropped on concrete a couple of times.

Good luck!

Yes, the software is too old. The MCS software has undergone numerous revisioons over the last few years. In fact, they went all the way through "Z" in the part numbers for the software and started over with a whole new part number. I think the current part number series is RVN4175.

Good Luck.

I am selling a TENTEC Omni D Model C with a matching power supply.
The radio was purchased from the original owner when I was in Alaska
and used with a G5RV antenna to work a lot of countries in Europe with
great signal reports recieved. I have pictures available upon
request.

I'm asking $350 plus shipping for the pair.

May consider trades for mobile HF/UHF/VHF antennas and/or dual band
handheld radios.

This radio is in fine working order and would be a great rig for a new
ham to explore the airwaves on.

Ok.. I went back and revisited the site. He works on all kinds of transievers. Never saw a single thing that advocated running with illegal power on the CB freqs. In fact, the only mention of that was in #60 of the FAQ. "It is illegal to use power amplifiers with CB radios. It is illegal to "tweak" the radios internal circuits to increase output power. The transmitter power of a legal, FCC certified CB radio is 4 watts AM. "

> He is completely illegal.

Please tell me, since I can't figure it out on my own, why he is "completely illegal". Our local ham store does pretty much the same thing.

> He can't sell that stuff to hams, but then, he never intended to.

First, why can't he sell that stuff to hams? Secondly, how do you know his intentions? He has almost as many references to Ham and the ARRL as to CB on his site...

I am not going to say you are wrong. I am going to say that I think you are wrong and will look for more info and others replies before I make up my mind.. So far in several NGs there seem to be about 3 or 4 people that feel he is wrong and about twice that many that feel he is ok.....<shrug>

You DIDN'T look at the stuff he has FOR SALE did you? A whole boatload of illegal amplifiers that by the looks of them run anything from 250 watts up to a KW or more.

Do you really think a ham would put SIX (6)! alternators in a truck just to run ham gear? One Leece Neville maybe but certainly not six. That's CB stuff and territory Good Buddy! Can you say 3000 watts mobile??? (Or is it MOE BILE?)

How many of the reputable manufacturers make HAM linear amplifiers that require 5 or 10 watts of input??? Yeah, you guessed it, NONE! (Besides being illegal it's not necessary.) Only the CB crowd are sold lineeeers that can be driven to full output with 5 to 10 watts. Guess why! Yeah, because legal CB transceivers (now that's an oxymoron isn't it?) run 4 watts.

If you think he's selling ham stuff then you sure haven't been a ham very long or have what I think is a distorted view of what's legal and what isn't. I'm sure glad I don't live near you and have to hear your splatter from CB gear being you might be naive evenough to buy as though it were decent amateur gear.

This is NOT taking a VOTE. It doesn't matter how many responses think it's OK.

His stuff is ILLEGAL and if you read the regulations it should be obvious to you. It makes NO DIFFERENCE what ANYBODY THINKS, the fact is that he's offering for sale ILLEGAL CB amplifiers. If you still think it's OK then I hope somebody in your neighborhood buys one and uses his "slider" to move on top of you while you're operating legally in the ham bands because that's what these guys are doing. Actually even if they were operating in the neighborhood of the CB band which is probably as close as they get, they'd probably cover the 10 meter band with their poor quality signal.

>I've looked on timewave's website and they have (what seems to me to be)
>conflicting information on upgrading the PK-232.

Bob,
Perhaps I can clarify? the upgrade situation. There are two versions of the PK-232MBX.

The version you accurately described above is the first version of the PK-232MBX. The MBX upgrade was user-installed, factory-installed or (in a small number of cases) factory original from AEA (Most of these units have all red LEDS on the front panel)

The second version had the MBX components integrated into the main PC board, so no daughter board was necessary. (Most of these units have red, green and yellow LEDs on the front panel).

To further complicate matters, at Timewave we added still another daughterboard when we created the DSP upgrade for the PK-232 and PK-232MBX. On the older MBX units, the original MBX daughter boards were too wide to allow the new DSP daughter board to be installed, so we provide a new, narrower daughterboard as part of the upgrade kit for older units. This means older style PK-232s with the DSP upgrade have both a MBX daughterboard and a DSP daughterboard. The newer style PK-232MBX units with the DSP upgrade have only one daughterboard.

Now, if anyone who reads this can understand it and can call us and tell us which upgrade kit he/she needs (without further prompting), we'll give a $10.00 discount off the purchase price of the kit! This offer is good through March 7, 2001. It's ok to check our website for additional information - go to http://www.timewave.com.

This is the only deal we've ever offered on the PK-232 DSP upgrade and we don't plan to have any others. Consider this sort of a spur-of-the-moment marketing test for newsgroups!

2845. Kenwood TS-570 problems

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-28 04:22:25 UTC
From: Bob Doyle <doyle@primenet.com>
Message-ID: <3A9C7D01.A255E388@primenet.com>
Source record: 63921

I 'picked up' a used TS-570 that has an odd problem...

When rotating the Multi/CH knob clockwise one detent -
the selected feature (filter/memu/etc) may increment,
decrement, or jump randomly. It is generally impossible
to get monotonic behavior when turning the knob...

I assume that the actual switch mechanism is some
form of an encoder used by the computer.

I thought I'd ask if this was a known problem and if
there were any quick fixes (cleaning etc) before
I roll up my sleeves...

Thanks
Bob - WA3TGF

Source record: 63923

Robert, I will try to get mine out tomorrow and look at the connections. In their day they were exciting, and a good experience for getting started. I have mine on the shelf as a reminder of those days. I have more modern equipment that will work all modes now. The Sixer is an AM radio with a regenerative receiver. If you can find someone who will work AM with you, you can at least get started. As for an antenna, a simple dipole cut for 6m will work fine, and will work if you decide to get a newer radio a little later. I have worked Florida from here in Central Texas with the dipole, and 10 watts SSB.
As for a mic, the flea market will be the best bet, or as mentioned in another post, maybe Radio Shack. Also look around on the internet, maybe someone will have the original cheap, or a replacement.
73,
Paul N5XMV

I won't waste my time going tit-for-tat with you. Selling those junk amps is against the law. Just read the rules below:

(Taken from the ARRL website www.arrl.org)

§97.315 Certification of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of certification from the FCC.

(b) Any external RF power amplifier or external RF power amplifier kit (see §2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:

(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:

(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.

(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

(3) The amplifier was:

(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the amateur service may be marketed for use in the amateur service.

§97.317 Standards for certification of external RF power amplifiers.
(a) To receive a grant of certification, the amplifier must satisfy the spurious emission standards of §97.307(d) or (e) of this Part, as applicable, when the amplifier is:

(1) Operated at its full output power;
(2) Placed in the "standby" or "off" positions, but still connected to the transmitter; and

(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified).

(b) To receive a grant of certification, the amplifier must not be capable of operation on any frequency or frequencies between 24 MHz and 35 MHz. The amplifier will be deemed incapable of such operation if it:

(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and between 28 MHz and 35 MHz. (This gain will be determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier); and
(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28 MHz.

(c) Certification may be denied when denial would prevent the use of these amplifiers in services other than the amateur service. The following features will result in dismissal or denial of an application for certification:

(1) Any accessible wiring which, when altered, would permit operation of the amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition of components to change the amplifier's operating characteristics in a manner contrary to the FCC Rules;

(3) Instructions for operation or modification of the amplifier in a manner contrary to the FCC Rules;

(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;

(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;

(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:

(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);

(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and

(iv) Be capable of sustained operation at its designed power level.

(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than 50 W mean power; or

(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the Citizens Band (CB) Radio Service.

up to a
> KW or more.

A "whole boatload"? He has TWO(2)! used amps for sale. In addition he has
some used tubes, some transistors, a SWR analyzer and a diode bridge.

>
> Do you really think a ham would put SIX (6)! alternators in a truck just
to run
> ham gear? One Leece Neville maybe but certainly not six. That's CB stuff
and
> territory Good Buddy! Can you say 3000 watts mobile??? (Or is it MOE
BILE?)

It is also car stereo contest territory. The fact that he has "CB" in the
link name doesn't help his case any though..

>
> How many of the reputable manufacturers make HAM linear amplifiers that
require
> 5 or 10 watts of input??? Yeah, you guessed it, NONE! (Besides being
illegal
> it's not necessary.)

Not owning a linear I have no idea who a reputable manufacturer would even
be. I do know that you yourself could make one though and it would be legal
to sell to another licensed ham. So what is illegal about these amps?
Nobody has been able to tell me yet..If a non licensed person has possession
of them and CB eauipment, then yes, they are illegal then, but not by simply
existing.
I have several radios that max out at 10Watts out. I think such an amp
would be quite usefull.

> Only the CB crowd are sold lineeeers that can be driven to
> full output with 5 to 10 watts. Guess why! Yeah, because legal CB
transceivers

gear.

Whether or not it is decent amateur gear makes no difference. Who he sells
it to does. It isn't a crime to sell crap.

> This is NOT taking a VOTE. It doesn't matter how many responses think
it's OK.

It does if those that think it isn't can't state matter of factly why it is
illegal (and nobody has yet) and those that think it is ok can state why it
isn't illegal.

>
> His stuff is ILLEGAL and if you read the regulations it should be obvious
to
> you. It makes NO DIFFERENCE what ANYBODY THINKS, the fact is that he's
offering
> for sale ILLEGAL CB amplifiers.

Then EVERY single 10M amp is an illegal CB amp and anyone that owns one
should have it confiscated and be fined and/or jailed. If the ONLY criteria
for being illegal is the POSSIBLE misuse then there are a lot of people in
trouble. After all, what is to stop someone from modifying it?

I am going to quote another poster, Stagger Lee, from R.R.A.misc.:

"From part 97.315: "... this requirement (certifiction) does not apply
if one or more of the following conditions are met: ...(4) The amplifier
is sold by an amateur operator to another amateur operator. (5) The
amplifier is purchased in used condition by an equipment dealer from an
amateur operator and the amplifier is further sold to another amateur
operator for use at that operator's station."

Seems to me that if the amplifiers qualifiy under either (4) or (5) the
sale is quite legal. They could also be in the FCC database, and under
97.315(c) be quite legal."
End quote.
Nobody has been able to refute this yet....although I highly doubt they are
in the database.

> If you still think it's OK then I hope somebody
> in your neighborhood buys one and uses his "slider" to move on top of you
while
> you're operating legally in the ham bands because that's what these guys
are
> doing. Actually even if they were operating in the neighborhood of the CB
band
> which is probably as close as they get, they'd probably cover the 10 meter
band

> with their poor quality signal.
>
I live in the Chicago Burbs and CB is quite calm and peaceful. I have been able to get info on CB many times that I couldn't get a reply or a pause from the repeater. On the other hand, our Skywarn net was terribly disrupted by a licensed ham kerchunking and playing music over the repeater....Back home they still hold (15 years and going) nightly chats on CB and never have a problem with the ruffians you describe. I guess Illinois is either just a very clean airwave state or you lump all CBrs into a single category.. As for your wish for my being qrm'd, I only operate 2M440 for skywarn and packet, and 6M. I have no intention of ever using HF. It doesn't interest me in the slightest. And no it isn't the code requirement. I learned it 20 years ago in scouting and used it in the army. HF and long distance comms just do not interest me.

I have done some searching and found that he also posted this ad in rec.radio.cb . A sale there would most likely be to an unlicensed amateur and therefore be illegal. This also brings into question his ethics. It does not however change the legality of a licensed amateur buying this equipment as it would be covered by the above quoted section of part 97. It all boils down to who buys the equipment. A CBr=illegal sale. Licensed amateur=legal sale. That is how I see it anyway and nobody has been able to show me any different. I am going to call Riley tomorrow and ask. If I am able to get through I will post the answer I get. I honestly do want to know what the true legality is here.

Look at 97.315 (4) and (5). Either of those may be the case here.

I saw this still being quoted and I noticed that the follow up I had posted is not being included in these quotes.

After a few days of back and forth and after having Cushcraft send me back my original Matching network I did get a call from the Tech and he said I was shipped the wrong box. He then sent me a New Matching network and I installed it. It did the trick and the antenna is working fine (Over 3 months later).

1) I think the entire problem was caused by poor quality control, also the circuit board on the new matching network seems to be made out of a different material.
2) I understand that I could have made my own Vertical but I did not want to take the time and I wanted the best performance I could get. So I paid my 400$ to have a product that should have been trouble free.
3) I am in the market for a second Vertical (For our Cabin) I must say that even though the R8 Performs very well I am not going to purchased another one. I am looking at The Gap Verticals and the Butternet Verticals. I still have not figured out if the Betternet uses a Matching Network like the Cushcraft.

Icom ICW32A 2M/70CM 5W ENCD/DCD 200MEM
around $259.00 cheaper if it's on
sale do a web search. You can build a cloning cable and get the
software from someone to help program if you want. I have never had any
problems with this radio I had an ADI 600 for a few day and returned it
for the Icom. plus the Icom has a modification so you can program in
some Fed Freq., FRS,MRS to listen to in your spare time.
FM 108-136MHz, 136-196MHz, 400-492MHz

That isn't the only criteria, fortunately.

You certainly can modify any amp. It can even save you a bit of money, if
you know what you are doing. You do have to make sure that it meets FCC
purity of signal requirements.

FS: Excellent copies of the Yaesu Service Manual for the FT101
series radios. (FT101, 101E, 101EE, 101EX, B,etc.) This is a
copy of the complete Service Manual with over 200 pages and
8 two page fold out schematics. A must for the 101 owner.
This is not the skimpy Operating Manual, but the full Service Manual.
$30 shipped to your door in the CONUS.

Thanks,
Randy

You didn't look at the NEW stuff he has for sale. Many different amplifiers,
all illegal to sell. Pictures and the whole bit.

Do some more snooping.

I think the final section was redesigned to have less distortion and
heat problems. More power on 2m.
>
> How well does the DSP option work, is it worth the $$$ ...?

Dunno. Hard to say really. Depends what you want to use it for. The
noise filter doesn't really do a whole lot for me. It works, but not a
major deal. I think it may well work on weak ssb/cw best. Doesn't do a
whole lot on stronger signals. But opinions vary, some in mobiles seem
to like it. Tbe auto notch works real well. No problems with that. I'd
rather see a couple of bandwidth filters for cw etc myself. The noise
filter is fairly useless to me for the most part. I use the NB more
often. So dunno, if the price is right, I guess it's worth it. Wouldn't
be the end of the world not to have it though. I have the 706mk2g, but
the DSP in the "g" is the same as the mk2. The DSP on this computer
sound card using chromasound is much more powerful. It combined with the
one in the radio gives me big league DSP. You can drag and drop filters
etc. I bet as good as a 756pro nearly. Dunno, maybe better. I haven't
tried the DSP on the 756pro...I'm using the chromasound demo to test,
but think I'm gonna register it. It works pretty well, but you have to
be hooked to a puter so only good at home unless you drag a laptop
around. I need a cw filter in the 706, but with the DSP I can make my
own with any freq/slopes etc up to -60 db. Real steep slopes too. The
only drawback is a little blowby when the band is real crowded during a
contest etc, but I'm using a wide filter. A real cw filter in the rig
would clean that up I think. I'm gonna get a 350 hz. MK

2860. Yaesu FT-901DM restoration (II)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-28 09:36:06 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3A9CC686.27C4A6C0@ctv.es>
Source record: 63936

Hello!

Yes, the FT-901 saga continues...

Yesterday I worked a bit more on the rig. As I told in last message, it did not work but at least fuses lasted more than a millisecond and some noise could be heard from the speaker. I got the Service Manual (thanks Manuel!) and read about the RX circuit description (I recommend this reading, with or without troubles with your rig. It is very educative...)

Well, going back to what I did, after a preliminary reading. I put the BAND selector on 20 meters, as in some other bands the display blinked, sympthom of unlocking. I powered my trusty HP-8640B generator and put it in 14250 kHz with a large signal (-73dBm is the standard 9 on most S-meters; I put lots more to be sure I would heard something in case the rig was deaf). That frequency corresponded to about 33750 in my FT-901 dial (remember that it was faulty and, in all bands, showed 33500 to 34000). I put the oscilloscope probe at the RF module RX INPUT pin and maximized the signal with the PRESELECTOR. So I knew at least the RF module was getting a nice on-band signal. In this module, signal is mixed and you should get at RX OUT the aound 9MHz IF signal (it is a single conversion receiver; only one IF). Well, I got nothing at RX OUT. So the problem could be in the RF UNIT... I took it out and looked for evident damage or circuit changes (as I had already located a bunch in other circuits). Nothing; all seemed original. So I looked in detail at the circuit to find what could happen... and then a light bulb over my head indicated I had a revelation: was AGC working fine?. Because a bad AGC could blank completely the signal, blocking the amplifiers. Checking AGC line in the IF unit (where it is generated) was definitive: 0 Volts!. So I switched the AGC switch to MANUAL and... got lots more noise in the speaker!. Tuning a bit the VFO I could get a good reception of the 14250 MHz carrier. Hooray!!!

Once I got calmed down, after the initial celebration, I looked at the IF MODULE schematic. In order to generate AGC voltage one transistor was used. So I got the module out and checked it. It was shorted. A fast looking at the NTE book (it is great to locate replacements, more for us in Europe with our different called components), revealed a substitute I had on hand (hint to use the NTE book: look for the original part and read NTE replacement. Then look for characteristics of the replacement, at the beginning of the book. Think about something similar and look if NTE crosses to same

one than original component. If so, you have a replacement!). Substituting he faulty transistor restored AGC work (both FAST and SLOW, as the derivate from same transistor). Good move!

But there was still something wrong, as the S-meter rested at ZERO position... Another look at the schematics (as S-meter signal is also generated at the IF MODULE) and found a suspect 2SK19GR J-FET. Alas, this is not on the NTE book, not my transistor substitution book!. An Internet search found an interesting page with lots of RF FET info. Comparing characteristics, I found that a 2N3819 was a suitable replacement and I had several on hand (beware: pinout is different). So I put and checked it and got a bit oversensitive S-meter but, at least, it worked. I will try later with another substitution or some circuit mod, but by now I will left it this way.

I could not wait and connected a real antenna to the rig. I heard some US and European stations. I checked receiving controls (APF, RIT, NOTCH, ...) and everything worked as it should. Good!!!

So, what I had?. A working 20 meter receiver (several other bands also work, but several other unlock the system; probably a bad VCO or PLL adjustment I need to look at later). Not bad at all for a basket case rig ;-)!

Then, about 23:50 local time, I decided to give a fast try to the COUNTER. I got the one from the working FT-901 and found that it worked in my rig, so the trouble was in the COUNTER MODULE itself. At about 00:30 the session was ended due to my eyes closing without my permission...

Well, as you can see, some further improvement has been done. Now I have to deal with the counter and the unlock troubles. And then the transmitter section... see you in next episode!

JOSE

PS: I will probably need some obscure ICs to repair my counter. If somebody has an FT-901/902 parts unit or a faulty counter module, I would be glad to buy it. Thanks!

Hi!

My R5 came down last week because of high winds, broken at the antenna-foot.
I will never by an antenna again with the centrte of gravity at the top.
I want to by a titanex HP5. There are no traps and it has an element for
each of the five bands.
Maybe this is a good solution for cushcraft victims.
Has anybody experience with this type of antenna ?

Info on the Butternut antennas is at:

http://www.bencher.com/ant_select.html

Very good writeups, including their manuals in PDF format.

I use a HF6V Butternut as backup for my tree-mounted dipoles. This ground-mounted HF6V is now 20 years old, never been guyed. It needed minor maintenance on some plastic insulators last year.

There is no "matching network", but there is a short section of 75 ohm coax used to transform 20 meter feed impedance down to 50 ohms. The various components of the HF6V look pretty rugged, and Butternut even rates it for the full 2KW. I have fed mine with 500 - 600 watts RTTY years ago with no problems.

What is the equation to relate the spacing of the plates of an air variable capacitor to the breakdown voltage? OR Is there a look-up table somewhere that might list this info for the common spacings? You know, 1/8" = 3000 Volts etc.

Thanks
Ron H.

> that might list this info for the common spacings? You know, 1/8" = 3000
> Volts etc.

From "Reference Data For Radio Engineers", Fifth Edition, ISBN
0-672-20678-1

"An approximate rule for uniform fields at all frequencies up to at
least 300 megahertz is that the breakdown gradient of air is 30 peak
kilovolts/centimeter or 75 peak kilovolts/inch at sea level (760
millimeters of mercury) and normal temperature (25 degrees Celsius). The
breakdown voltage is approximately proportional to pressure and
inversely proportional to absolute (degrees Kelvin) temperature.."

Hi Just received a Kenwood TS-950SD from Daniel J. Radcliffe" <kf9bp@execpc.com> And he shipped it to me first and didn't even send it COD. He told me when the rig arrives send him the funds through the mail, which I already did. The Kenwood 950SD and accessories are just as he described, if not better. Not to many people would ship without COD. He is a great ham....Thanks...Rich

2877. Trade 2 HW-7's and HW-7-1PS for HW-12A,22A or 32A

Newsgroup: rec.radio.amateur.equipment

Hello. I have a very good condition clean HW-7 (no mods) and matching power supply, no manual (I have it just can't find it at the moment), Ham key, Murdock headphones and a HW-7 parts unit (Good VFO cap. and front panel, no top cover.) for trade for a VGC HW-12A, 22A or 32A with NO MODS. My first choice is a HW-12A, 2nd 32A, 3rd 22A. I will be able to supply pictures upon request. Please respond off list.

Thank you,
Randy KB8ASO.

p.s. I will consider a HW-12 (Non A version) if it is near mint.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Cushcraft says to guy the antenna if you use it in windy environments.
Hustler and Butternut advise to guy also. I have had a Hustler 5BTV survive
60mph wind with no guys. I guyed a Cushcraft R7 about 10 or 12 feet from
the top it was invisible to 50mph wind. Especially guy if your area is
prone to high winds and ice or snow loading.

Since cabins tend to get vandalized and a big commercial antenna is a sign
of possible goodies hooked to it inside, you should consider an ladder line
fed dipole antenna. Take your rig and tuner home with you. On the other
hand, look for a good used Cushcraft R7.

I guess I made the mistake of having an opinion and apoligize for the remark I made but I get fed up with all of the self appointed lawyers and sherriffs on the ng's He's a ham selling them as ham gear, not illegal. He has other items of question not so legit. Ethics is the problem here for me. I took the ad at face value without going to the sight. either way these 2 amps being sold in this manner are legal. the new ones are not. Personnaly I wouldn't buy them and can't believe I got sucked into this thread so nuff said about the amps. I wish nothing but goodwill to all regardless of opinion.

73 to all and keep smile'n!!! cuz it's contagious!!!

Did I really write that? I meant to say:

1) get a DTMF dialer box from Radio Shack
2) hold your stk mic up to your HT and use the HT's DTMF pad to dial (if you have the number in the HT's speed dial memory all the better.
3) Use your HT if you are close to the repeater with auto patch
4) Ask someone else on the repeater to call for you then talk direct to the cops
5) Use your cell phone
6) call from your nearest pay phone
7) send SOS in Morse code with your car horn, flash light or blink your lights.
SOS is not ----. .----.---- in Morse code!
(Don't laugh--my bicycle head light will blink SOS (...---...))

Hello all.
I have a 940SAT for sale. The rig is in great condition. Faceplate is near mint. Top has a couple scuffs. Electronically it works great. One slight problem: the light behind the meter remains off when the rig is fired up after being dormant for a time. This problem is fixed when the "dim" button is toggled. Rig comes with power cable and manual (no box). A Kenwood desk mic is also included (connector wire has some wear but it works fine).
Looking for $1000 OBO.
Will also consider trade for an IC-706MKIIG or a FT-100.
Thanks
-Greg

2891. Re: Kenwood TS-570 problems

Newsgroup: rec.radio.amateur.equipment
Date: 2001-02-28 22:47:05 UTC
From: "Bob M." <kcxxxxxx@snet.net>
Message-ID: <Odfn6.1736$GD.740683@typhoon.snet.net>
Source record: 63866

My TS450SAT developed the same problem. I thought it was an expensive encoder, but it turns out to be about $15 (includes S&H) to get a new one. Upon removing the old one, I discovered that it's more like an old carbon potentiometer: a piece of phenolic with a carbon pattern applied, and a couple of wipers on the shaft that press on the carbon and develop the required 90 degree phase difference so the computers can tell which way you're turning it.

The first thing I would do now would be to remove it (it unplugged rather easily once I dropped the front panel down), and use a good contact cleaner (I happen to have Channel Master Color Shield) that has some silicone in it. Spray it inside where you can see the carbon and rotate the control several times in each direction to clean it. Repeat the application. You may want to do this over some paper towel to absorb the cleaner that will run out (yes, apply enough so it floods the control). Wipe off any excess, re-install, and enjoy.

Hope this helps yours. If not, just order a new one from the Kenwood parts place that's closest to you. Just make sure you have the proper part number - my TS450 service manual had two numbers shown - the parts place was able to figure out which one was correct and got the right part to me within 2 weeks.

Ok OK But from what I know about Ion clouds and discharges, I thought that the 30Kv/cm only applies to point discharges! The air variable Caps are parallel planes with some edge effects and I thought there was a different formula! Also, I don't think it's strictly linear! Can I use the 30Kv/cm and divide by say 10 to conclude that a 1 mm gap is good to something less than 3Kv? ALSO! What about real world equipment where the pressure is NEVER 1 Atm or things like humidity vary al over the place? What I was looking for was the formula used to label air variable caps for general application and something tells me I can't just use the 30Kv/cm rule!

How about a rule of thumb voltage/spacing from the ARRL Handbook ? This
is for a transmitter plate tank capacitor.

Spacing (in) Peak Voltage

.015 1000
.03 2000
.07 3000
.125 4500
.15 6000
.25 9000
.35 11000
.50 13000

Cheaper at e-Bay??? If you can get one cheaper at e-Bay, expect it to have been dropped on concrete! You will find handhelds bid up higher then what you can buy the same one for new! This is in most cases... If you actually find one that you get for less then new... buyer beware!

Just my experience... Its hard to get a good deal at an action when everyone in the world is there to bid... =)

Well, they no longer make 'em. The latest 2001 RS catalog lists only
an htx-200 with all of 1/5th-watts output power...for $179.99.

On the other hand, if one goes to Amateur Electronic Supply at
http://www.aesham.com/ on their home page, they have an Icom IC-T2H
handheld at only $130 (about $40 lower than usual street price). Six
watts output on 2 meters with 40 memories and all the tones the
original poster is looking for. I'm tempted to buy one, myself :-)

My club is in the process of constructing a new repeater, and we're torn between two controllers. Ultimately we'd like to do some linking to other sites and we've come down to the LinkComm RLC-4 or the SCOM 7K. Some people have told us that the RLC is very buggy and that they come out with new software all the time... otherwise we like that model. The SCOM is nice, but only has one link port on it.. not quite what we wanted, but if it's more reliable we'll go with it.

Ideas, suggestions?

You've got the practical answers. For the theory, search on Paschen
curves.

The only interesting point is that the breakdown voltage starts rising
again for very
small air-gaps - that is, gaps small enough that the probablity of a
charge carrier
hitting a gas molecule and causing ionisation along its route between
the plates
becomes small.

And I don't think that you can get your plates flat enough to take
advantage of this
at atmospheric pressure.

Hello,
I am looking for a VHF Spectra that covers the Ham Bands also. I was about to win one on EBAY and was out bid at the last moment. I had everything prepared to win it and BOOM was stolen beneath me.

If you have a VHF Spectra available for buying please email me and let me know.

Thanks so much and hope to hear from someone soon.

I absolutely agree. I subscribe to all of these newsgroups, and my
current newsgroup reader does not automatically delete crossposted messages
once they've been deleted elsewhere, so I have to delete the same messages
over and over in each newsgroup.

Lets break this thread up guys. Before replying, please delete all
newsgroups other than the one you're in. Either that or simply stop
responding to this thing (its a darn silly subject line anyway).

Many years ago I came across an article in an electronics magazine that explained a simple way to alter an FM radio to pick up aviation signals. I tryed this on a clock radio I had and it worked great. Helps if you live near an airport which you probably do if you have already heard some activity on an image frequency. It involves using an older style FM radio (by older I mean one with a tuning knob that moves a pointer across a scale, as opposed to a digital readout synthesizer type). Open up the case and look for the tuning capacitor assembly. It is usually a clear square package about 1 inch x 1 inch. There should be some small coils close to it. One of these coils will affect the tuning of the FM band. All you have to do is spread apart the turns of one of these coils. Too determine what coil it is, tune in an FM station and then tune slightly below it so the signal is fuzzy. Next try spreading apart the turns of one of the coils and see if it tunes the FM station in clearly. If it does, you have found the correct coil. If you continue to spread that coil, it will shift all the frequencies lower, thereby bringing the aviation frequencies down so you can tune them on your dial. Although aviation frequencies us AM you will still be able to receive the signals with your FM receiver.

Source record: 63895

I traded radios with a guy this week, and he forgot to ship the manual with the radio. He said he would be mailing it out soon, but I need to know one thing about the radio before then.

I can't figure out how to set the PL frequency on the Kenwood TM-241A. I can figure out how to enable the tone, but not how to set the frequency fo the tone.

Can anybody give me a quick tutorial?

Thanks,

Scott Keller

The TAPR TNC-2 documentation is pretty close:

ftp://tapr.org/software_lib/tnc/tncdocs.zip
ftp://tapr.org/software_lib/tnc/tnc2sch.pdf

The major differences between this and the MFJ 1270B are removal of the
MF-10 filter and the addition of a switch to go between 1200 and 300
baud.

I recently won an auction for some tubes and immediately sent a request
for an address to send payment to.
along with this request I sent my address AND my phone number. the
individual failed to contact me after I
repeatedly sent emails with my info. after 1 week I posted a negative
feedback and almost immediately he phones me. The individuals obviously
only sells if he gets enough money for the item. Personnaly I thought
thats what "RESERVE PRICE" was for. He also requested that I learn how
to use my E-mail. I guess if he got mine which he admitted and you are
reading this......I must be doing something correct. To avoid a like
situation and have negative feedback from a deabeat like him I recommend
avoiding

joevitalee@aol.com

It pisses me off that people misuse the auctions and waste peoples time.

And to answer his claim that I don't want to pay half price *(what I won
the auction for)* for his 50.00 suggested retail tube
I payed full price for 4 of them. $200.00 plus tax. I probably could of
waited and bid on them with someone
else but I needed the tubes AND I was pissed at the situation.

It's been a while, but I believe if you HOLD the function button
down for longer than a second, you go into the SECOND FUNCTION mode,
and then press the tone button to enter into the tone selection mode.
Rotate the channel selector to choose your tone(s) and exit...

You need to watch out that he doesn't negative feedback you, for sh*ts and grins. One must read into some of the feedback that's posted. Many times folks won't post because of fears of retribution. That's a flaw in the system that just Ebay won't address. I also don't like dealing with people who have sunglasses next to their name. Hiding something, for sure. There's also an option that allows you to have a "private feedback", that can't be viewed. What the hell is the reasoning behind that?

Hi Lars,

I would go for a HP-8640B, best with Opt.003 (reverse power protection), just in case. Opt.001 and 002 are also good to have, of course.

If you need info on them, just do a searh on the WEB and will get tons of it.

I have two of them and are definitely great.

Good luck!

JOSE

Hello there,

I am looking for a Radio Shack DX-394 shortwave receiver. Please email me if you have one for sale, and the price you are asking. If you have a picture of the radio that would be very helpful.

Cheers,

Richard.

I've been using an FT100 mobile for over a year without problem.
It's a very nice rig, hears well and has every feature you could
want for a mobile installation. I selected it over the 706 because
of the size of then remote front panel and the brightness of the
display. [your mileage may vary]

HAMFEST March 4, 2001 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB and SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - March 4, 2001

LINDENHURST, LI - NY

On March 4, 2001 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $18.00 each table. Tables at the door are $25.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. Current ARRL/VEC fee is $10.00, exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704-0356

E-mail GSBARC info@gsbarc.org or visit GSBARC online at
http://www.gsbarc.org/hamfest.htm

Next Hamfest
October 28, 2001 - Great South Bay ARC

From: "Seth D. Ambrose" <sda@cisco.com>
Message-ID: <3A9FCC37.1453@cisco.com>
Source record: 63818

Thanks for the advice guys!

I've narrowed it down to either the ICOM IC-T2H or the Yaesu VX-150.
AES has the Icom for $130 and the Yaesu for $150. Looks like I'd
probably do just as well either way.

Any reason you guys can think of why I should choose one over the
other? Keeping in mind my needs are merely a rugged HT that I can use
to reach repeaters from way out in the sticks and access autopatch if
necessary.

Thanks again for the help!

Seth

Just received this rig from Joplin in a swap. Doesn't function. The S-meter lights up. Hash from the speaker. If RIT is pressed, Then the display shows red D-LOCK, VFO-B, MEMO, RIT ON.
No numerical display, just the white illuminated khz bars.
Sometimes, if I press RIT and T_F SET together, the numerical display flashes with the numbers just as the rit goes off. Then the screen is dark. BAND has no effect.
Is there by chance a memory reset button? Or would bad battery cause this. Don't have a manual yet, and have only played with it for an hour. No mike. Thanks for any civil suggestions. James Lueck W5LWU

Dr OM Larry,

Visiting the rsgb SITE Aat http://www.rsgb.org.uk/ might be very helpfull.
Furtheron the European bandplan differs from the US, VHF 144 - 146 MHz
UHF 430 - 440 MHz so you might start doing some mods at home

Source record: 63822

The 2m FM Calling Freq. is 145.500 refered to as S20 these operate in 25k steps (S16-S23).
The 70cms FM Calling Freq. is 433.500 refered to as SU20 these operate in 25k steps (SU16-SU23)
We have changed the 2m Bandplan over to 12.5k Steps but locally (Salisbury) there is not enough activity for the need! May as well setup the FT-50 for 12.5k steps though as I'm sure London will be much more active & you can always ask the other station to pick the "Frequency" to QSY to!
Hope this helps
73's
Steve G7EXZ
PS.
APRS freq for UK is 144.800 for any visiting users of the TH-D7

Seth,
If you buy the Icom IC-T2H, you won't regret it. I did the same search a few months ago- my main concerns were ruggedness, AA battery compatibility, power outuput, and single band.
I've seen terrible intermod problems with multi-band HTs.
I bought mine along with nickel hydride batteries, and used the supplied Ni-Cads in other things around the house. I'll never have to worry about a custom battery pack.
Another plus is that the Icom, unlike my R2 wideband receiver, is very easy to program. It is very intuitive, so you don't have to flip back and forth through the manual often. And once you program it, you remember how to in the future.

2951. FT: Collins S-line

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-02 22:59:46 UTC
From: gspubl@tca.net
Message-ID: <3aa025c7.172401640@news.tamu.edu>
Source record: 63827

I want to trade my Collins S-line for a Tentec Omni VI Pro. I will
entertain monitary offers but I
specifically want the Tentec Omni VI Pro. If you want a beautiful
S-Line and you don't have the Omni (or
know someone who has one for sale) check with Tentec.com online and
see if a used one is available. I
have a near mint Collins S-Line to trade: 75S-3B receiver (late),
32-3 transmitter, 312B-4
wattmeter/phone patch/speaker console, 516F-2 matching supply in
cabinet...all winged emblem. I am
the second owner and have all original manuals (in individual file
folders as the original owner kept them)
as well as all the receipts of its original purchase correspondence
with bids from 3 vendors, all factory
correspondence. All units have just been sent out within the last
year and professionally re-aligned and
updated with the latest factory mods to bring them back to the
factory spec. I'll trade it off for a
TenTec Omni-VI Plus. If you are contemplating getting in to
Collins' greatest equipment, this is a turn
key way to do it. I would never be without my original S-line that
I have owned 20+ years (not for sale)
but this is my backup station and trading it off is the only way I
can justify theTentec. ....

Source record: 63829
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Dear all,
I brought with me to the U.S. a Yaesu FT-290RII which I bought and used in Europe, and consequently it covers 144--146 MHz (and has the 1750 repeater call tone). Yaesu U.S.A. tells me the only way to make the rig cover U.S. frequencies is to change the CPU, which only costs $93 :-P.
Is there _really_ no way to reprogram the radio to work 144--148 MHz?
On a related note: Of what use is a VHF/UHF radio without subtone encoder in the U.S.?
Best regards,
Hans-Christian W6/SM6TLH [hcb@caltech.edu]

The radio has a problem with the thru-holes on the control board. This is a common problem and sometimes can be cured by carefully reflowing all 50+ of the holes. That cure if for those with lots of time. Those with lots of money opt for the Piexx replacement board at $259.

Either way will cure it. Maybe on the first cure, I have some I gave up on.

Message-ID: <20010302213333.02181.00000515@ng-mq1.aol.com>
Source record: 63833

Here is the procedure:
(1)Press the "F" button for more than one second.
(2) You will see the "F" button flash
(3) Press the "Tone/T.Alt" button within ten seconds of seeing the "F" button flashing
(4) You will now see the currently selected CTCSS [aka "PL"] Tone in the display.
(5) Rotate the "Tuning" control or press the microphone "Up" or "Down" buttons to select the tone you desire.
(6) Press any front panel key to end the selection process.

The above info' was obtained at the Kenwood internet site.

>Does anybody know if there is a hidden menu (service menu) accessible
>on the 570DG like that available on the TS870S.

In a word...YES! Was talking to a guy about it the other night. I'd recommend looking at a service manual before messing with it, but it consists of shorting pins 8 and 9 on the ACC 2 socket (this can be accomplished with a paper clip), then turn the radio on while holding the N.R. and LSB/USB button. It apparently gives you an 'adjust menu' option at that time. You should then remove the jumper. I know that Menu #'s 18 thru 26 have to do with max power output on appropriate bands, but I didn't take good enough notes to tell you exactly which menu setting is for which band. Apparently, after making the changes you wish to make you go to Menu # 51 and press the up or down key. The display then reads 'Ready' and you should turn the radio off and then back on. THAT IS ALL I KNOW ABOUT IT! DO THIS AT YOUR OWN RISK! I do NOT feel comfortable enough or feel I know enough yet to attempt it, so I haven't. The gentleman I spoke to on 75 meters advises that the radio is easily capable of 150 watts on all bands and that he has performed this procedure on 'about a dozen' rigs with no adverse effects. AGAIN, there is OBVIOUSLY not enough info here and I provide it as INFO ONLY!!! Don't come crying to me if ya tear your radio up!

By the way, ain't the TS-570DG a great rig?!?!

2961. Re: Yaesu FT-290RII coverage modification?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-03 03:07:27 UTC
From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <3AA05FEE.762B8420@nettally.com>
Source record: 63841
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I used to have a second hand FT-290RII (Nice radio) and it was an "A" model which I assume was for the US. Inside I noted that a green wire was draped from behind the display board and was cut in two with clear heatshrink tubing insulating the cut (Looked like factory work). This radio covered 140 to 150 MHz which seemed unusual but perhaps ideal for transverter use. In addition, an optional FT-7A board is used as a sub tone encoder-decoder board. You can probably buy an aftermarket tone encoder-decoder board and wire it in. Sub tone as you call it (PL or CTCSS) is required on a lot of repeaters in the urban areas of the US. The tone board was always a limitation in this radio as it could be set to only one tone at a time and was accessible only by removing the battery/pa and a metal plate.

I have to agree on the T2H. I have one and it has never had any problems
and I take it camping and fishing all the time. If you use alkaline
batteries you can get almost 7 watts out of the blasted thing. It is listed
as 6 with the nicads. With a homemade jpole made of 300 Ohm twinlead and
some coax I have used it here at the house as a 'base' when I moved my other
radio out to the car. I got mine on sale for $150 so the price is right
too.

Courtesy of the divorce, I have lost all of my reference files. Among them was the formula for calculating how much wire was on a spool. Does anyone have this handy?

I just got hold of a spool of RG-58 and I'm kind of curious how much is there.

Cable OD: 4.5mm
Spool ID: 110mm
Spool OD: 250mm
Spool width: 182mm

Source record: 63839

I have one of these units, but I haven't given it enough use to wear out the encoder yet. It probably is one of those cheap ALPS type of mechanacal encoders. I have had similar problems with the Yaesu 2400, 212, and others of their ilk. You might be able to clean the contacts with a good cleaner such as Caig De-Oxit, or Caig ProGold. It is worth a shot; the 570 is a great rig, electrically.

From: theshearers@worldnet.att.net
Message-ID: <3AA07C54.443F8F87@worldnet.att.net>
Source record: 63840

-measure the average diameter of the spool, in the middle of the layers
-use the formula for circumference of a circle, Circ=PI x Dia PI=3.14, (3 is good enough)
-multiply that by the number of turns on the spool, can be hard to count, might have to estimate

so if you have a hank of wire, 1 ft in dia, then you have 3 ft of wire per turn (actually a little more)
and if you have 10 turns on the hank of wire, then you have 30 ft of wire, give or take

4.5 mm --- > 13.5 mm /turn, times turns
110mm --- > 330 mm /turn , times turns
and on an on...

Why not pick up a used scanner that covers the airband Jim? The reason I ask is ham HTs usually are not quite as good outside of the ham bands as one would expect. Just food for thought, I am sure there are some decent HT too in that range I just think you are asking a lot. My Alinco DJ 580 is okay in the air bands but nothing like the radio shack Pro-43 or Pro-60 I have used. OTOH you might just want the use of an HT without carry 2 radios!

Let us know what you come up with will ya?

Glenn

Just remember, when you screw it up there is no reset or default menu to go
back to. It's an alignment menu meant to be used with the proper equipment
to set the various adjustments available.

My shop rate is $50/hr to fix it after you feel the need to play.

Also, think about it. 100w to 150w is less than 3db gain. It takes abt 6-7
db per s unit, the guy on the other end won't even know you did anything.

The only way to do that would be to take all the wire off the spool -- I could just measure it if I did that.

Have a Yaesu FT 767 speaker for sale...it is the matching speaker for the FT 736R and other series radios...

It is a 8....has a scratch on the rear left side...unnoticeable from front...

Price $75 plus a couple bucks for shipping...

Before Christmas, I traded an excellent TS-440SAT for a TS-930SAT with a guy in Joplin. It never came. The guy was a willow-the-wisp.
Thanks to the Jasper County sheriff's dept., and the USPS National Fraud Center, the rig arrived yesterday. It doesn't work, but victory is MINE!.
Thanks to all who responded to my fixit help plea. I'm not sure what I'll do with it. The popular opinion is the thru-holes on the board. May trade it off as is for a working unit or TS-940SAT + cash or a boatanchor to boot. Lou in CA offered to fix it, and I might go that route. So thanks to all . James W5LWU

Hallo Hans-Christian

Yeasu would love you to come with your set to them for $ 93..
But I think it would be a little to much for just removing 1 or 2
resistors..
Its a little work but whats an hour for an ammateur....hihi
Here it comes..
First remove the frontpanel from your set, including the controll knobs and
the washer for the mice connector.
Then surch for the resistor witchs is labeld 000.(just above s06).
This is resistor 02.
When you remove this resistor your FT290 covers from 140 til 150 MHz.
But there is moreYou have to remove it anyway because you need that resistor
(0 OHM) for the modification to the US frequenties..
Solder the resistor between S09 and S02 (solderpads are there already) and
your modification is done.
You now have the US frequenties in your set.
But there is more if you like to use it as I do i.e. transvertor use.
A little tabel is added to play with..
R02 R03 FREQ
=============
/ / 140-150 MHZ
/ 0 144-148 MHZ
0 / 144-146 MHZ

Try it and save yourself a lot of monney witchs you can spend on more
usefull things in the hobby

Message-ID: <3AA15C4C.983305D7@arrl.net>
Source record: 63720

I wanted to throw this one out and see if anyone had a good solution. I run my home station with an Astron RS-35M, but I also have a pair of gel-cell batteries that I use for station backup during power failures. The hassle is, I charge the batteries using a car charger and when the power does fail, I have to transfer all of my power cables from the Astron to the batteries. My question is, is there a way to hook the radios to the batteries and the batteries to the Astron so that #1 the Astron will keep the batteries charged and #2 I don't have to swap cables and the batteries will immediately kick in when the power goes out? I think I remember hearing something about a "smart charger" or something like that, but does anyone have a solution to make this work? Thanks for your time and ideas.

2997. Re: FT-100 vs 706MKIIG

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-03 21:58:00 UTC
From: Ed Cregger <nuke663jlm@vei.net>
Message-ID: <ta2q3e2qumbg7d@corp.supernews.com>
Source record: 63722

I had ordered a Yaesu FT-100D after taking a week to make
the decision between the two radios. On the morning that the
FT-100D was supposed to ship, I read an article on Deja.news
which stated that the little Yaesu utilizes pigtails for
antenna hook-ups instead of SO-239 connectors. That did it
for me. I called and pleaded with the seller to let me
change the order for the 706 MKIIG. He was gracious enough
to comply.

If I was going to operate the rig as a mobile, then the
Yaesu would have gotten the vote because it is smaller.
However, I do not do much mobiling these days and I did not
want to have to replace the pigtails every couple of years.

This may be a silly reason to some, but it was good enough
for me.

==========

re Protocol/data, Nathan Burnside writes:

I can now back up the entire radio on my calculator (HP48G), and reinstall the settings. I can change individual channels also, however I can't create new channels or erase old ones. There seems to be a place in memory that contains the list of channels that have been defined, and I haven't taken the time to figure out how it works. (this is all starting to get a little complex)

Basically, if I try to write to a previously undefined channel, the radio won't recognize it, and if I try to erase an existing channel, it just displays 0.000 frequency, but doesn't remove it from the channel menu. There must be some way to indicate what channels are defined. Also, programming the cell frequencies doesn't work. I've decoded the commands, and this is what they contain:

AL~F,0340,W,0,4678700,50,000,00,1F,1F,123456789012 Sample data
1 2 3 4 5 6 7 8 9 10 11

1- header Always the same for the DJ-V5
2- memory address:
0000h-01F0h configuration stuff (haven't looked at it much yet)
0200h-0F30h all of the channels (0 - C2)
0F40h-0FFFh unknown

3- W means write, R means read. (to request for the radio to send a memory address, end the command here) Eg.
AL~F0340R<CR><LF>
will tell the radio to send the contents of address 34h

4- Hex digit representing repeater split direction and mode

bit 1 set: minus
bit 2 set: plus
bits 2 and 3 clear: FM
bit 4 set: WFM
bit 3 set: AM

hex binary
4 0100 Plus frequency split, FM
8 1000 Minus frequency
5 0101 plus frequency, WFM

5- Frequency

6- Repeater frequency offset:
06 - 600 kHz
10 - 1.000 mHz
16 - 1.600 mHz
30 - 3.000 mHz
50 - 5.000 mHz
76 - 7.600 mHz

7- Don't know. Seems to always be 000

8- Frequency steps, and power setting:
together, these two hex digits are 8 binary digits. Bits 3-5 (counting
from the left as written) are the frequency steps:

00000000 bit positions
12345678

000 5kHz
001 10kHz
010 12.5kHz
011 15 kHz
100 20 kHz
101 25 kHz
110 50 kHz
111 100 kHz

bits 7-8 are power output:

00 high
01 low1
10 low2

9- CTCSS encode freq., skip scan, and DSQ encode

bit 1 - skip scan
bit 2 - DSQ encode
bits 3-8 CTCSS encode freq (I haven't done a complete table yet)

011111 67
100000 69.3
100001 71.9
100010 74.4
.....
001000 114.8
.....
011110 250.3

10- CTCSS decode freq., CTCSS on/off

bit 1 set - encode, decode
bit 2 set - encode
bits 3-8 CTCSS decode freq as described in 9.

11- channel name:
6 pairs of hex digits, one for each letter:

00h - 09h - numbers 1 - 10
0Ah - 24h - A - Z
25h - 2Fh - Special Characters in the same order as when you
scroll through them on the radio

So, that's about all I know. I haven't really looked at anything before
0200h, which is where the configuration stuff is. I'll try to post all of
this on a web page somewhere in the hopes that someone will create a
freeware application with it.

I have an Icom 706MKII in excellent condition for sale or trade. The radio
will be shipped in its original box wit the original manual and quicksheet.
THe radio performs as out of the box and is guaranteed not to be DOA. It
will be shipped with the following accessories:

- UT106 DSP, installed, but the original box will be
shipped
- MB62 transceiver mounting bracket
- MB63 remote head mounting bracket
- OPC581 remote head separation cable
- LUC computer interface cable

I am asking $800.00 or will consider a trade for a high-end VHF/UHF mobile
rig + cash. If interested please e-mail me direct at: thecop@optonline.net

3003. Re: HP8640B Options Question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-04 00:42:08 UTC
From: Bob Camp <bob@cq.nu>
Message-ID: <Abgo6.63765$Vj5.10554339@news02.optonline.net>
Source record: 63730

Terry,

I am by no means an 8640B expert, but here goes:

1) The bottom end frequency on both of mine is just below 450 KHz. I would bet that yours will at least get to 455.0

2) I *think* Option 3 is a little power limiter in line with the output connector. No idea how to check it other than open/short type stuff.

3) Moving option 1 from one generator to the other looks like a lot of work.

Hope this helps.

Bob Camp

Thanks, Bob. Sounds like the 8640B will work fine for me if it gets down to 450. I haven't seen a manual yet so didn't know about how the options install. I was hoping Option 1 would be fairly straight-forward but doesn't sound like it.

You can't "guess-timate" the spool weight? Do you need to know, right down to the inch? I bet it would be closer than the formula. JJ

Source record: 63733

On the display for the TM-742, the decimal points light for various options. Such as, if the remote audio is set for a band, the ten kilohertz decimal is on. If all the decimal points are lit on two bands, the unit is in cross band repeat.

What causes the decimal point in the first kilohertz display to come on?

I'm sure I've set some setting accidently, but the manual doesn't address what the decimal point on the display at this point means.

I have no way to guess the weight of the spool and reel mechanism.

Working it out by the math worked well enough for me.

Hi:

A friend on mine has a need for a VHF Mototrola Spirit MV11C portable. Would like to have one as close to new (and with the original box) as possible. Need one to replace one that is beyond repair.

Model desired P23SRF03F2AA which is a small 1 watt VHF Portable HT. Battery need not be new !!

Anyhow, if you have 1 or 2 of these, please let me know the condition, and I will make you a fair and resonable offer.

Monty

The stats can lie if you make them lie.

You gave raw figures that do not take into account the population increases in the US over these years.

If instead of raw numbers, one takes the numbers you presented and figures out the percentage of hams in proportion to the US population you get a clearer picture:

Year Hams US Population Percentage
1917 6,000 103,268,000 0.006%
1928 17,000 120,509,000 0.014%
1936 46,000 128,053,180 0.036%
1950 90,000 152,271,417 0.059%
1956 140,000 168,903,031 0.083%
1958 160,000 174,881,904 0.091%
1963 250,000 189,241,798 0.132%
1977 327,000 220,239,425 0.148%
1989 500,000 246,819,230 0.203%
1997 678,473 267,783,607 0.253%
2001 682,240 277,228,212 0.246%

So, even if one takes into account the artificial surge in Ham Population attributable to the "Codeless-Tech Barrier Lowering" of the early 90's, the ham population is beginning to decline.

Stand by to see the numbers decline even more as individuals who came in on the wave of the 90's allow their licenses to expire. Care to make a wager on which way the numbers will move?

Who in the heck would want to be a ham after reading the garbage in this group anyway?

No wonder the ARRL is whining about declining membership! Is this why they keep raising their annual rates? The ARRL is just more of the same old "same old".
Next thing ya know, the "ten-ten" club will see a well-deserved drop in fees, too.
Money wasted on both accounts if you ask me.
Besides..your stats show that the Ham community is actually growing year to year. This is evidenced by the callsigns that are no longer available and as new ones are being issued.
Now go take on the day.

I have the same TNC and use HyperTerminal. I am tempted to break out my old TRS80 color computer since there are instructions for making a cable for it and I still happen to own one. I knew there was a reason I never got rid of that thing... :-)

The TNC itself doesn't need any software as the configuration stuff and operating modes are all built in. You only need a terminal program (of almost any type) to access the TNC.

Jim-

Practically any good HT (like the Icoms) can be modified to go out of band like that. They will receive only in the aircraft bands. Check at the next good hamfest for a professional mod person. They often have a booth and do it on the spot. They can also tell you what they can do with which HT's. They work out quite well.

So you saying that because the numbers as a percentage of the population is decreasing, that ham radio is on the downhill slide? Have you not listened to all the controversy over the population count? The government took special pains to accurately count the homeless and illegal aliens this time. I don't think that either group has a lot of interest in Ham radio. The raw numbers tell another story. Once again how does one interpret the data. I think you would agree that if we were to cut the number in half we would still be at the level we had in the 60's.

With people like you as well as some of the others that have responded in the same manner, it's no wonder the hobby isn't doing as well as you would expect. Maybe your daughter needs to monitor this group for a while, then make a decision whether or not she would like to associate with the losers that spew similar tidbits. Clean it up there, Rev. Roger! Your language indicates your intelligence level!

I've looked through my book twice, and it doesn't show a setting for
the 1kc decimal - maybe it's a display glitch, and you might want to
(shiver) reset the radio and start over...

Perhaps my math skills are deteriorating due to my advanced old age (46), but that chart appears to indicate not a drop, but a continual INCREASE in the number of licensed hams in the US.. both as raw numbers AND as a percentage of population (per capita)... Am I wrong? Anybody?

Except for all the extra distortion the rig will put out. :/. I think
turning up the power on most all of these rigs is a bad idea. If they
were designed to be 150 w transmitters, they would be sold that way.
They could get more money. I tried this just for kicks years ago on my
old ic-730 to see what it would do. YUK!!! So much distortion...I found
that that rig could only do 90-100 w CLEANLY. So I left it as normal.
And like you say, they'll never know the difference on the other end in
signal strength. It's not worth it to up the power on these rigs. MK

I can't give a comparison as I haven't tried the ft-100 yet. But a friend of mine bought one, so next time I see him, I'll give it a test drive to make a comparison. I went with the 706 myself after about 2 months of hair pulling. I think I'm starting a bald spot in the middle..g So far, I've been quite happy with the 706g after a month or so of testing. Thats about all I can say. I can't bad mouth the ft-100 without trying it first. Most that own it seem to like it also. Part of my going with icom again, was the good service I got with my ic-730 over the years. And it's still a good rig if I could just find the one part that pooped out on the display board. MK

Do I need to think like you to be up on the times? I don't think so, bucko. I also don't think this hobby needs the likes of you. Why not try another life? Also it may be wise to keep your daughter out of the gutter and the men's locker room. She may thank you when she's 40ish. Afraid of you? MWAHAHAHA! As you would say!

Look closely and see the decline starting at the last stat. I was merely presenting alternative numbers that I felt showed a little more than raw numbers of hams in the states. Presenting raw stats like the previous poster did is like comparing 1917 dollars to 2001 dollars without taking into account inflation.

I could really care less about which way the numbers go, just enjoyed finding out.

Hello. I am in the process of converting an Intech 2500 marine radio to
ham band use.It uses a Collins mechanical filter to derive the USB
signal. LSB was available as an option and replaced the AM filter
with an LSB Collins unit. I have the service manual
but it does not list the Collins P/N for the LSB filter.
The USB unit's P/N is 526-9897-010.
From the filter list @ http://www.wa3key.com/filters.html#master
I have determined that the correct filter will be a 526-9939-010.
If this is incorrect, please let me know. If you have one for
sale or know of where I can get one for
less than a kings ransom, please let me know.

HF-281 & HF-282 526-9897-010 USB 1.95
HF-281 & HF-282 526-9939-010 LSB 1.95

Thank you,
Randy KB8ASO

Is the CAT interface for a FT-840 just a standard RS232-TTL converter??? Has anyone constructed an interface and can supply specifics??? Any information would be greatly appreciated...

I would much rather build an interface than buy it, kinda takes the fun out of the hobby when you have to always purchase pre-built equipment.

Thanks,

73's.... N0TOD

I very much believe in freedom of speech, as well as all the other contstitutional liberties (supposedly guaranteed us) that are being stolen by the day... but Roger, you really push the envelope. There is no need for personal attacks here, most especially name calling/slander of people you have a disagreement with. As my grandmother used to say... have a civil tongue in your head.

3073. Has anyone dealt with Bill Turner on Staten Island, NY?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-05 01:44:53 UTC
From: foxblaine@aol.com
Message-ID: <20010304204453.18806.00001051@ng-mi1.aol.com>
Source record: 63649

Please advise if you have. I responded to an ad he had on QTH.COM (Listing #93878) in which he had SEVERAL rigs up for sale or trade. I made an offer on an FT-847 which he accepted. He asked me to go ahead and ship it, and gave an address of:

Bill Turner
599 Midland Ave.
Staten Island, NY 10306

I became a bit weary due to his vague and infrequent answers to my e-mails, so did a bit of investigating. Did a reverse address search on him and spoke with someone at that address on Staten Island who has NO IDEA who Bill Turner is. Searched the QRZ database and could only come up with one call that matched, and that was in New York City. No luck tracking down a phone # there either. Thank GOD I haven't sent my rig out yet. I'd like to hear from ANYONE who has dealt with this guy.

His email is Bturner1957@aol.com -- What REALLY worries me is that I made a vague reference of my employment in the law enforcement field and that he could call me on my cell phone in the squad. AOL allows you to check the status of e-mails you send to other AOL users, and I see he read it, but no response at all from him.

Thanx in advance...and Bill, if you're legit, let me know so we can get on with the deal, and apologies in advance if it turns out you are legit.

3074. Would like opinions on Ameritron AL80-A & Icom 765

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-05 03:17:24 UTC
From: Salesman <Salesman@Store.com>
Message-ID: <FAA1B1C802D4BCB8.0340C58B150265A3.73811E7A774B8865@lp.airnews.net>
Source record: 63650

I have the opportunity to purchase an AL80-A and an IC-765 for about $1000 from the family of a silent key. They have no idea what condition they are in but both units look clean and well cared for. There are also numerous accessories including an SM-8 desk mike, external speaker, etc. The AL80-A is wired for 240V.

I am primarily interested in the linear as I already have an FT-847 and an Icom 706 MkII-G which I would like to use it with. I would probably sell the 765 as I have heard that it is still a popular radio with contesters.

I've never owned a linear before so I don't know much about what to look for.

Is the AL80-A a good amp for use with the FT-847 and can it be rewired for 120 volts? Is the mod to make it work on 10 meters very complicated? I couldn't find much info about it on-line.

Any opinion on either or both of these pieces would be appreciated.

Thanks

Dave Alden KB8VJD

3075. Re: FT-100 vs 706MKIIG

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-05 03:29:32 UTC
From: Salesman <Salesman@Store.com>
Message-ID: <C7AE9F34C9794F84.6CDC08560971F074.9CEA2181CCC90C48@lp.airnews.net>
Source record: 63652

I agonized for a long time between the FT-100 and the 706 and finally decided on the 706 because of the various problems (I don't know if they are real or trumped up) reported in newsgroups with early production of the FT-100. I Can only report that I am extremely pleased with the 706MkIIG. It is a wonderful little radio that is very easy to use. I consistently get great audio reports with the hand mike and the Heil headset that was a bonus with it. The receiver portion seems to be top notch for a mobile unit. Even the little built in speaker has good audio that is easy to hear above traffic and road noise. The DSP works great!

If you think you might use the radio as a base, the Icom seems to fit the role a little better because it doesn't have these ugly pigtails sticking out of the back and has a nice folding desk bracket.

I've owned several Yaesu's and a few Icoms and while Yaesu seems to be a little more "cutting edge" I have had some problems that required sending them back to the factory. All my Icoms have performed flawlessly as advertised.

That's my 2 cents for what it's worth.

i second the HP 8640B and the price is getting very reasonable..
i got mine for $200 at a hamfest a few years ago and i think the price has
dropped..
another good one, but tube type, but very nice is the HP 606B and if you
find a synchronizer you'll have a good deal..
the Tektronix 191 is also quite good..

I think there is another way of looking at this.
With the popularity of the Internet and the number of hours that
people spend on the Internet its a very good testomony to Ham Radio
that the numbers have not decline even more.

Instead of crying about the lower number of hams why not do something
about it? How many people a year so you tell about Amateur Radio?
Without all the crying about the licenses changes and boo hoo because
you had to know the code and a new guy does not.

I think that a lot of people that might take the time to learn enough
to get a ticket decide that they are not wanted because they listen on
the air (just like we all did, I listened while I was studying for my
licenses) or in these newsgroups. In stead of hearing a lot of
friendly people getting along with each other and possabley finding a
Elmer to help them on there way they hear all the negitivity about
some licensing changes that they dad nothing to do with.

One important thought, if we do not get new hams into the hobby
someday the goverment will take our frequencys away and find a way for
those frequencys to generate revenue.

Find some way to promote our hobby, post class skedules, talk with
techie people, help them put up am antenna, Do Something.

Now dismounting soapbox,
Delbert McCord

Del... quite right.. it's we ourselves that have the power to save the service. We are supposed to be ambassadors, representatives of our countries.. but more, of our service and our hobby. Infighting never did do anything for any organization, other than to destroy it. As far as licensing changes go, was it not we ourselves, through our representative organization, the ARRL, that brought these changes about? Certainly they did not fight for these changes on their own volition, after all, they already HAD their licenses.

One point of disagreement however, that people seem to be laboring under a misconception about. The FCC MAY consider denying American hams use of the amateur bands, but they cannot, but treaty, offer these bands up to other services for profit. The amateur frequencies have been internationally allocated by the IRC and WARC conventions and the US is a signatory.

Please folks.. let's enjoy the bands, and the people.. and show our best sides to the world... :)

Source record: 63660

The Ameritron is a good little amp, I have one with the 10 meter kit (I am looking to sell mine as well). It will run on 110V, but if at all posible I would not advise it. It went for $699 new so if you figure you save 40-50% off new when getting used gear of that vintage figure the AL80 is worth around $400. So if the IC -765 is good for $600 you have a deal(I dont know the value of that rig)

Good luck
Dave

I am likely to buy a used Yaesu FT-1000. I have followed news about this fine series for years now. I am aware that there were some significant changes made in later models, such as a changeover to PIN switching diodes to improve intermod performance. I am fairly familiar with the differences between the 1000D and non-D models.

I would appreciate any info you could share about the revision history of the series (specifically the serial numbers at any break points); also any opinions as to favorable pricing.

I am aware of the new 1000MP mark V. The pricing puts it a little beyond my budget right now. In any case, I am a bit nervous about the very menu-driven approach Yaesu took with the MP (although I heard the Kenwood 870 was worse in that regard). I assume that the mark V is similarly menu-obsessed. I am from the old school and am really a lot more comfortable having critical functions under control of knob-twisting. :o)

Thanks, 73, David K3KY

3089. Yaesu FT-901DM restoration (III)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-05 12:13:47 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3AA382FB.2C844CE7@ctv.es>
Source record: 63664

Hello!

After some time without news from me, here I am again with the last report on my FT-901DM work...

In last message, I talked about the COUNTER module trouble. It seems the transceiver was hit by a power spike or perhaps the 12V (7812) regulator fault damaged some components (as I have already located no less than 4 transistors, 4 ICs and several resistors dead). Anyway, the result is that a couple DIODE MATRIX ICs (propietary of Yaesu, so non-standard ICs) were dead (some outputs were shorted with the inputs). So I removed them from the circuit and checked the COUNTER module from the loaned 901 to find which outputs (6 lines) they should generate based on BAND input data (11 lines, no less!). So once I got the large table, I built a DIP SWITCH 'simulator' of the 6 output lines. These lines go to a couple 40192 counters. So I hooked on my 'simulator' to the corresponding lines and set the DIP SWITCHES to check if the counters were fine. But not, something was wrong as several of the 6 lines were not operative (changing them did not change the display output). So I bought a couple 40192 ICs and removed the bad ones. Once replaced, I got good readings with the DIP simulator. Good :-)!!!

Then, as finding the original diode matrix ICs was just impossible, I needed something which, taking 11 input lines generated 6 output lines (I though on it as 11 bit input vectors and 6 bit output vectors). I thought about using a PAL (Programmable Array Logic), but getting the equations needed to program it was not so evident... and then I thought about an EPROM. Yes, you have read it right!. I just needed to use the 11 input lines as ADDRESS lines and store at the appropiate positions adressed by them the DATA, which would be the 6 output lines. So I built an adapter for the commonly used 27C256 (32k byte). Yes, I know I just need 12 positions, but they are easily available and I needed at least 11 bits (well, this is not exact, but was the easiest way). I have not yet checked the EPROM on the counter, but will do this soon... stay tuned for the results!

I had another trouble with the 40 meters band. It did not lock (display flashed). All the other bands (including a 'phantom' 11 meters position, just after WWV band) worked fine, with good sensitivity. So looking at the manual I found that the problem should be in the VCO unit. Checking its output, it was fine or all the other bands but inexistent when the 40m band was selected. Control line (the one which selects the 40 meters VCO) was also

good and arrived to the 40m VCO circuit. So trouble should be in the oscillator. I got the VCO module out the chassis and looked for visual trouble. None. So I guessed the 2SK19 FET could be bad. I replaced it with a 2N3819 and... eureka!!!. I got the VCO working on 40 and the display stopped flashing. Another fault fixed!

Now it was time to check the MEMORY module. I had not plugged it yet, as I got the rig with it unplugged and it was not neccessary for preliminary works (and it was also just over the messy wiring). But now, with most troubles overcomed, it was its time. And it worked right first time (I had reworked its connector at the chassis wiring in a previous stage, as it was obviously modified with every contact mounted backwards). It seems my work payed of ;-)

I plugged also the KEYER module but have not checked it; at least there was no fire nor smoke coming from it...

Once the FT-901 was getting back to life, I took a look to the FC-901 TUNER I got with the rig. Externally, it was an easy 8. But the TUNE and LOAD controls had not a nice feeling. So I opened the box to find that it was deformed horizontally, so the LOAD and TUNE holes in the front panel were not on line with the capacitors... After some work unbending it, I got it straight and now the controls perform as they should. It cleaned also fine and it is now on the shelf, waiting for the 901 to arrive. Now there is just the SP-901P left to be cleaned and I will have a nice line.

So, what can I say?. I am HAPPY as a boy with new shoes!!!

Regards,

JOSE

From: Paul Van den Hende <paul.vandenhende@nospam.skynet.be>
Message-ID: <3aa39e1a$0$185$5a62924d@news.skynet.be>
Source record: 63668

Hi,

Thanks for reading this message !

After the use of my ICOM821D with a PA, i suspect the rig to have a malfunction ! Caused by the use of the PA?.....i don't know....

In receive mode, it seems to be not sensitive at all, and i can't here the transmission....sometimes by clicking a few times the PTT, the reception is ok again, and is hearable because also the audio (noise level) becomes louder.

Also i suspect the rig of transmitting out of the band, however an amateur frequency is displayed.....synthesizer problems ?

Is there anybody who had the same problems, and has a cure ?....

Thanks !

Paul

I just bought a Midland 73-030 portable VHF radio with no documentation, thinking I could figure out how to work it. And for the life of me, I can't figure it out!! And I can't find anything online. Can anyone either tell me where I can find the user guide online or give me a clue how to program it? Thanks a lot...

John

Is it a conduction cooled PA? I have a Motorola PA that uses a 8560AS conduction cooled tube I do not have the schematic but I did draw one out I use it on 144 Mc. SSB
Excellent P.A. for 2M a little change should be made in the output coupling but not really nesisarry..,

The Ameritron AL-80A was selling for around $900 plus before it went out of production. Mine was a leftover after the AL-80B was on the shelves. No one will buy mine for less than $600. I guess I'll just have to keep it. 8>)

I have been running mine on 110 volts for the eight years that I have owned it without a problem. I agree that 220 volts would be better, but it has not been an option for me. I'm still using the original Eimac 3-500Z and it is still in very healthy condition.

>I have the opportunity to purchase an AL80-A and an IC-765 for about
>$1000

I used this exact combination for years. $1000 is a bargain. I just sold my 765 with the SM-8 microphone and 250cy cw filters for $1200. I used to own an early 706. I'd sell the other transceivers and keep the IC-765. It's far superior to an 847 or a 706Mk II-G. The AL-80A will operate fine on 120vac. The first few years I owned mine, I was living in a condo and had no choice. It's preferable to run it off of 240vac if you can and draw half as much current. The 10m mod is as simple as cutting a wire. When I bought a house 7 years ago, I bought an AL-1200 but kept the AL-80A as back up amp. It's much quieter than the 1200 too. I highly recommend both the AL-80A and the IC-765. I only sold the 765 because I wanted a new toy and bought a 756PRO because of all the bells & whistles. If you have any questions, feel free to write to me directly.

When I bought my AL-80A 10 years ago, the list price was around $1099 and I paid $899. They typically sell for around $600 now, maybe a little less, depending on condtion, of course. The IC-765 is worth $1000 all day.

Since you said VHF and heat sink, I'll throw out that the tube was
probably an 8560 and the unit a vintage early Micor or late Motrac Base
Station Repeater type. The often white block inside the pa cab is
beOxide, just be carefull not to sand or breath dust from any broken parts
of it.

Hit the flea markets and have a look around for the Motrac Series of high
powered base / repeater units. God knows I worked on enough of them in my
day...

I've converted the Heathkit SB-230 conduction cooled amplifier to run on
the 8560 tetrode.... similar mounting and lots of gain when set up
properly.

cheers

Hello,

I just got my Technician license and I am looking to purchase a small, lightweight radio for backcountry skiing and backpacking. Since I carry this on my back, every fraction of an ounce counts.

The people I have talked to so far (examiners and sales people at HRO) indicate that the Yaesu VX-5R is the radio for me. It is a little bit pricey so I was considering buying a used one but the only place I saw it was at Ham Radio Online.

Does anyone have any experience buying used from this source? Also, the used VX-5R's that I saw on this site seemed to have a modification for some early production bug. Does anyone know the details of that and whether a radio with the fix would be ok?

Thanks in advance for your help.

Mark

<none@mindspring.net> wrote:

>The stats can lie if you make them lie.

And your table below proves that! You've formed a ratio of two
independent variables (no where did you show there is any direct
dependent relationship between the two). Your percentages ONLY
show that the rate of population growth is greater than the rate
of amateur licensee growth; yet both are growing at independent rates,
though. For example, internet and cellphones do not affect general
population growth, yet one suspects both those modes of communication
might possibly have an affect on amateur growth (yet amateur growth
still occurs at a positive rate).

I suspect you've read the book, "How To Lie With Statistics."

Why not make up a table comparing the annual amateur population to the
annual particle count of the ozone layer and draw a conclusion from
the sequence of calculated ratios? (Yikes! An increase in licensees is
causing a decrease in the ozone layer! Run for your lives! :)

Okay ,but a longer antenna will lower the resonant frequency.
I could see hitting 10,11 and 12meters using a matcher but reception on
40meters
will suffer greatly. A matcher only fools the radio with a 50ohm load via
adjustable
capacitive/inductive circuit. It wont change the resonant frequency of your
antenna.

Add a spring to the bottom and it will bring you close to the required
length.

Hello
I am looking for some older Icom and Kenwood info. I was wondering what older models of these radio have any or all or these features: digital voice recorder, auto antenna tuner, VOX, and is over 100 watts output? PLus is good for DX and limited contesting. Please email me direct at NZ8C@aol.com with any info. Thanks!

The extra inches won't help much but you can buy extensions
to install under the whip. Hustler makes them and the Texas
Bugcatcher guy makes them.

The RS fiberglas whips were designed for 5 watts and the center
wire is very small. I don't know if it will take 100w or not.

Buy the VX-150.... I have not owned the T2H from Icom, but have owned about 15+ HT's and if you will read the review on the VX-150 in QST you will see it is the BEST 2m hand held radio they have reviewed and tested to date. I love mine.... I would not trade it for anything... it is an EXACT copy of the commercial Vertex rig they make. Which could be part of why it has such GREAT sensetivity selectivity, and rejection. The review is in the August 2000 issue of QST. VERY VERY sturdy and ruged HT. 5watts max power out with 4 power settings. It is very easy to program and use and I know you would be happy with it. E-mail me with any other questions you might have.

Greetings...

Still Looking for a good trade, after having many offers fall thru...

I have for trade a beautiful Kenwood TS-940SAT. Radio is cosmetically a 9.8 and a solid 10 in operation. I just like to trade radios! I am looking to trade for an Icom IC-756, Icom IC-746 (possibly), or perhaps a Yaesu FT-920 or FT-847. Any trade offers listened to. I VERY much want this to be an in-person trade, and will drive a reasonable distance to meet someone halfway. I am in Beloit, WI, which is 10 miles north of Rockford, IL. Anyone in Chicago, Milwaukee, Madison or anywhere fairly close willing to trade? Please e-mail with offers. Rig includes box in excellent condition and manual.

73, es gud dx de N9LXX~~~

R. Blaine Fox

3141. Updated Deep Cycle Battery FAQ

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 07:47:54 UTC
From: william.darden@uumail.de
Message-ID: <3aa4960a.323570735@personalnews.de.uu.net>
Source record: 63616

Here are the major questions that are covered in my latest revised copy of the Deep Cycle Battery FAQ 3.02:

1. WHAT IS THE BOTTOM LINE?
2. WHY BOTHER?
3. HOW DO I TEST A DEEP CYCLE BATTERY?
4. WHAT DO I LOOK FOR IN BUYING A BATTERY?
5. HOW DO I INSTALL A BATTERY?
6. HOW DO I CHARGE (OR EQUALIZE) A BATTERY?
7. HOW DO I INCREASE THE LIFE OF A BATTERY?
8. WHAT ARE THE MOST COMMON CAUSES OF BATTERY FAILURES?
9. HOW CAN I STORE BATTERIES?
10. WHAT ARE THE COMMON MYTHS ABOUT BATTERIES?
11. HOW LONG WILL A DEEP CYCLE BATTERY LAST ON A SINGLE CHARGE?
12. WHERE CAN I FIND MORE INFO ON BATTERIES?

If you (or anyone else) would like a free copy of the latest version, you can find the Car Battery FAQ at http://nyquist.ee.ualberta.ca/~schmaus/batfaq.html or Deep Cycle Battery FAQ at http://nyquist.ee.ualberta.ca/~schmaus/dcbat.html. You can also email me at bjb_darden@yahoo.com and I will email you a copy.

Regards,

BiLL.......

3142. WANTED IC706MK11G please

Newsgroup: rec.radio.amateur.equipment

Swap my TS50S HF radio.Complete with Boxing,cabling,mic,h/book ready to fire up.Unit has been used only twice [about 15mins] since NEW and is in UNMARKED condition.Looks and performance are positively "10" each,no question!!! NEVER mobile or otherwise mistreated,non smoker.

SWAP for MINT COND IC706MK11G,complete with box,cabling,h/book,mic etc ready to run + i will put in CASH in ANY currency to balance the equation.I will ALSO pay ALL shipping [both parties] for RIGHT RADIO,all i ask is its in excellent condition please.

PLease EMAIL with condition + cash amount to settle deal. cheers Rod VK4XI rredbeak2@dingoblue.net.au

3143. ICOM 21A to DV21 Plug Pinout Info

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 11:28:02 UTC
From: Les Kramer <wa3sgz@mindspring.com>
Message-ID: <982h8ppuo1@slb6.atl.mindspring.net>
Source record: 63618

Recently, my son was given an ICOM 21A (Yes - a VERY old but still workable radio) for general 2M NBFM communications and APRS. He was also given the matching DV21 VFO that covers 146 - 148 Mhz. Both units appear to be in full working order and the 21A has produced a few recent transmissions (i.e., on xtal control) with excellent signal reports.

Our problem is that the 7 pin plug that connects from the DV21 to the radio (i.e., in the side to side configuration) has had all the wire connections fatigue. We have the plug and full access to the wires, but I don't know which wires connect to which pins. There are white, black, yellow, and green wires with two miniature coax cables (i.e., both have gray jackets and the shields soldered together). The original documentation identifies the pin numbers and functions (i.e., grd, 18 Mhz xmit, etc.) but does not specify wire color or methods to test for the function. Also, documentation does not specify the pin number versus the side of the plug (i.e., viewing the pins or viewing the solder terminal side). I have tried tracing the wires in the VFO to the PCB (i.e., I have the schematic), but the PCB to wire connections are so buried in the internals that I have not yet been able to get access to the other each of the wires to complete the tracing.

I would appreciate if someone would provide me with the correct pinout to wire color information for this DV21equipment? Please mention if the plug connection information is viewed from the pin side or the terminal side.

Thanks,

Les

It would probably help this discussion if cf told us what he had in mind. Somewhere I have the feeling that he got onto one of those mobile base coils that adjusts all over creation. They did indeed use 108" whips, pretty standard in the pre-CB days.

My guess is that 102 would be equally inefficient.

I have an Astron power supply that keeps blowing fuses when you power it up. I replaced the pass xstrs, nothing obvious visually. Maybe the SCR? Do I check it like a diode? Any ideas of what to do?

Thanks,
John in Missouri

3146. Help Software

Some time ago I posted a question on this forum asking for a reference where
I can download Navtex software etc. As nobody has replied to the thread,
I'll rephrase my question :-)) Can anybody get me started!

I have bought for my sailing yacht a Lowe HF-150 mainly for Navtex and
Weatherfax/charts

Who can provide me a 100% operationally Demo Software with a restriction of
30
days to receive Navtex and Weathercharts and, all information to decode
synoptic weatherfax code.

If this is not the proper or only newsgroup please correct me.

Best regards,

3147. Re: Astron PS repair question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 13:23:59 UTC
From: Al Robinson <robinsona@rl.af.mil>
Message-ID: <3AA4E4EE.B50B24A1@rl.af.mil>
Source record: 63622

John:

Test the SCR as you would a diode by switching polarity on the test leads
while connected to anode and cathode.
Unlike the diode, a good SCR will read extremely high (almost infinite)
resistance in both directions. Remember, an
SCR is a "gated" diode that doesn't conduct until a small voltage is applied
to the gate.

In your case, I would disconnect the secondary wires from the power
transformer, energize and see what happens.
If the fuse goes, you've got a bad transformer. If not,continue checking
items that pass a lot of current, like the diode(s) between the transformer
and filter caps.

Good luck and 73

Al, W2JUV

RADIOTRON DESIGNERS HANDBOOK.4th Edition. Item #1414867789. Edited by F. Langford-Smith. 4th Edition (1965) in excellent condition. This is the classic reference handbook on the design and application of radio receivers and audio amplifiers. Includes electronic basics, tube theory, components, transformers, oscillators and amplifier design, plus loads of theory on AM and FM receivers. If you build or refurbish your own radios, this should be on your shelf.

Ditto that--102" stainless whip and 6" spring on a ball gives the 108" you are looking for. I have this setup mounted on top of a Suburban and hits a lot of stuff at speed--low wires, limbs, traffic lights and bridges. Hit scrapes the roofs at gas stations and banks. The whip is just very slightly bent near the top. Fiberglass will not hold up to this abuse. I use an Icom AH-4 antenna coupler that tunes 40 to 6 meters with this whip. Be advised there are much better antenna systems out there, but they WILL NOT take the abuse that a stainless whip and spring will. Even my SGC whip antenna will not take this abuse and that is why I mount that on the left side of the vehicle (center of the road has less over head obstructions) and about 2 feet lower than the stainless whip. The SGC antenna performs better, but I will swap it out and put the stainless whip on if I am going to seriously abuse it, like go fast off road in woods. To improve performance of the stainless whip, add about 10 feet of fine wire (22 to 28 gauge) with a gator clip. Do this at night because it looks goofy. Be sure you are in motion when you key up!

Ditto that--102" stainless whip and 6" spring on a ball gives the 108" you are looking for. I have this setup mounted on top of a Suburban and hits a lot of stuff at speed--low wires, limbs, traffic lights and bridges. Hit scrapes the roofs at gas stations and banks. The whip is just very slightly bent near the top. Fiberglass will not hold up to this abuse. I use an Icom AH-4 antenna coupler that tunes 40 to 6 meters with this whip. Be advised there are much better antenna systems out there, but they WILL NOT take the abuse that a stainless whip and spring will. Even my SGC whip antenna will not take this abuse and that is why I mount that on the left side of the vehicle (center of the road has less over head obstructions) and about 2 feet lower than the stainless whip. The SGC antenna performs better, but I will swap it out and put the stainless whip on if I am going to seriously abuse it, like go fast off road in woods. To improve performance of the stainless whip, add about 10 feet of fine wire (22 to 28 gauge) with a gator clip. Do this at night because it looks goofy. Be sure you are in motion when you key up!

What are you guys/gals using for shelving on top
of desks in the shack? Is there some self-standing
shelves/racks available that fill on top of a desk
and hold ham equipment?

thanks,

Jeff Kelly
KT2K

I've had great luck with white pressboard shelves made for holding shoes on the floor of a closet. These will give you 2 shelves above your gear and don't cost a bunch. Bought mine at Lowes. Brian K3USC

Just saw these advertised by a battery vendor in QST or CQ for about $15.00,
but they hold 8 cells. They also may have the 6 cell versions as well.
Both work on my IC32AT however, in charging NiCds in my 6 cell cases,
leakage occurred and one was was ruined.

3175. Re: Ideas for station equipment shelves?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 18:53:03 UTC
From: B Nehl <k0emt@dbbear.com>
Message-ID: <cacaatobekdruj0ev3c0hs0ijc4uft865t@4ax.com>
Source record: 63647

Well, Brian's suggestion of using "shoe shelves" is good.
Be sure to check the height of your equipment.

I had recently purchased a bookshelf for videos and had to buy another
one just for it's shelves. (It was cheaper than buying individual
shelves.) Then I had the frame of the second shelf left over.

I sketched out how I wanted to arrange my equipment then went
to work building my custom shelf from the scrap.

Hint, pre-drill holes where you plan to screw together.
Drill from the finished side. The laminate has a bad habit of being
"chipped" out by the drill bit.

Use metal corner brackets and angle brackets for additional support.

Looks nice and works well.

73,

Bryan

3176. FS: YAESU FT-7 XCVR $175

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 19:07:13 UTC
From: "James P. Rybak" <jrybak@mesastate.edu>
Message-ID: <983ch0$9d2$1@news.mesastate.edu>
Source record: 63549

FOR SALE: Yaesu FT-7 xcvr. This is one of the classic early low power xcvrs. 20 watts input on CW and SSB. Covers 80 through 10 meters but no WARC bands as they didn't exist when this rig was made. The rig has no problems that I am aware of and cosmetically is a 9 on a scale of 10. Comes with mic, power cord, and manual. Price is $175 plus $15 UPS shipping in the U.S.

Jim Rybak W0KSD

3177. Motorola Maxtrac 40 watt mobile-UHF--NEW!!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 21:10:56 UTC
From: Dan W Walterscheid <ministry@wtrt.net>
Message-ID: <taan4n9ddntc30@corp.supernews.com>

This is a Motorola Maxtrac UHF 40-watt 2-channel mobile commercial
transceiver. These are going very quick, only a few left!
Model number: D44MJA73A5CK. This unit is in PERFECT condition, works and
looks
like a brand new radio. Bench tested and scored a perfect 10. No knicks or
scratches. This radio is PC programmable and includes all CTCSS (PL)
encode/decode and DCS (digital PL) capabilities. Frequency range is from 430
MHz
thru 480 MHz, including the 70 cm Ham band and all GMRS and FRS frequencies.
With a high output power of 50 watts, 40 watts safely without risk of
overheat.
With 5 pin accessory jack, mini-UHF coax connector (standard),
quick-disconnect
power plug (standard), includes a PL-to-ground commercial microphone.
***THIS
RADIO CAN BE COMBINED WITH ANOTHER RADIO AND A REPEATER INTERFACE MODULE TO
CREATE YOUR OWN HAM/COMMERCIAL/GMRS REPEATER.*** Payment options: I accept
Billpoint, Paypal, MO and certified checks. +$15.00 shipping Textronix Inc.
$250.00 Firm, peaked, tuned & Aligned for maximum recv & transmit!! These
make excellent repeater radios or 70 ctmr ham for high power long range &
super recv! Dan (806) 481-9319 cactus4christ@hotmail.com

3178. Drake R8 audio hum

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 21:11:48 UTC
From: Jim Leder <jleder@cinci.rr.com>
Message-ID: <qjkaat0ifinpkdq5jtapc47b81kp96jqlg@4ax.com>
Source record: 63552
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

Seems I have seen this topic before, but don't remember if there ever was an answer, but does anyone know of a mod or fix for a very minor audio hum for a Drake R8x? It is very minor and I have had it since it was bought but with so much time to kill, I was wondering if anyone knew a way to eliminate it. Do others have this problem? It's easy to detect, turn down the audio volume down(all the way) and use headphones. Do you get a low volume hum? On AM reception it is more noticeable on SW stations above 15mhz. At first I thought the SW station just had a hum on their carrier, but they can't all be that way. It's not bad, just annoying. Did a quick search around the WEB and this has been mentioned in reference to a lot of Drake equipment, mainly TR7's,R4 and such. Only one obscure reference to the R8, but no solution. Thanks!

The shoe shelf idea works good. Just make sure whatever you use is heavy enough to support the radio gear. You may want to add center supports if heavy stuff is put on shelf. Same for the table--make sure it can take the weight! Older rigs, amp, tuners, vhf rig, powersupplies and rotor controller easily can go over 200 lbs, plus your added weight when you fall asleep on the key near the end of a contest!!!

3181. VX5R battery charging

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-06 21:39:39 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3aa5590e$0$70817$bbae4d71@news.net-link.net>
Source record: 63555

At $50 to $70 for a battery, I want mine to last a while! Can you damage the VX5R Lithium Ion battery by "short charging" it with the supplied wall cube or optional fast charger? That is, I just want to "top off" a partially depleted battery.

Will the charger do a complete charge cycle or just top off the battery as needed?

What if I take the radio after it has been charging for a while, but "complete" is not on the display, and use it some, then hook the wall back up to it? Will it resume charging where it left off, where the battery is now, or start all over again? Just how smart is the "cube" or the radio anyway?

How does the quick charging stand charge the same batter faster out of the radio than in the radio using the same wall cube? A friend has one and he says the "now charging" and "complete" messages do not come up on the display if the radio is in the charging stand, but the batter charges faster.

3182. Re: Drake R8 audio hum

I haven't particularly noticed it on the R8B but might mention that
the R8B anyway runs a lot cooler on 12v, and presumably if there was
hum it is gone. And with the heat reduction you can stack stuff on it.

I use an Astron SS-18 switching supply for the R8B and twenty (so far) 12v
accessories like ANC-4's and DSP's & filters. Remember to fuse everything
separately. Eighteen amps will burn up typical wiring.

The switching supply also runs cool and I haven't noticed any birdies,
though the supply is in the basement away from the radio, a legacy of
a MFJ switching supply that did have birdies.

The amp is right out of the ARRL Handbook and the design is from W6EMD. It uses one 4CX800A7 tube. RF deck and Power supply are separate and can be rack mounted as well. Gain is 15.8DB + with a modest 19 watts of drive you will get a 700 watt output. This is a well built amplifer the power supply is setup for 220 or 110. I believe its on 110 now. I dont have a use for this item I dont have the capabilities to run this. I was told it was working when i got it. But as with all used electronics I cannot guarantee it. If you interested I have some pics i can email PLEASE serious inquiries only. $500.00 plus shipping. John

On fiberglass whips,

Something in a 96" model some of you may wish to
consider/try. The Francis CB-28 Wheeler Dealer or
the CB-50 Amazer. If the 96" will work for your
particular set-up I heartily recommend the CB-50.

Hey, Dick,

You just reminded me of something. Speaking of "base coils" that adjust all over creation, I have one of those ancient Bay Mobile antennas that was the fore runner of the Webster Bandspanner. It has the 1 1/2" base coil with a 102" whip that slides in and out to resonate on frequency. I found it at a local hamfest (Charlotte, NC) for 10 bucks. I just bought it for nostalgia and, mostly, it hangs on a rack in the garage. It's not very efficient, of course, but I suppose in its time, it was considered "neat". Musta been around 1950 or so? I have used it on 20-10 meters and it works pretty fair. Seventy five sucks! Just for kicks, I once pondered a way to move it up and down like a screwdriver. NAH! Not worth the trouble. Still, it's in excellent condition and, I suppose, it spent quite a few years in someone's barn judging from the lack of wear--even the whip isn't bent.

I once loaned it to a friend and he broke it! But, being a machinist, he repaired it good as new (or even better)! Can't tell it was ever damaged and it works as ever--which was never all that good. LOL!

3202. FS: Autek RF-1 HF RF Analyst

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-07 01:42:27 UTC
From: Greg Becker <na2n@ulster.net>
Message-ID: <Zlgp6.3091$l5.2721460@newsfeed1.thebiz.net>
Source record: 63577
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FS - Autek RF-1 RF Analyst. Digital LCD Display indicates SWR and IMPEDANCE. Indicates SWR Ratio. Shows IMPEDANCE in Z ohms. Indicates Inductance and Capacitance. Covers 1.2 KHz to 35 MHz. Tune your tuner without transmitting. Cut precise 1/4 Wave and 1/2 Wave tuning stubs. Find out where your antennas really resonate.

This unit is in good but used condition - there are some minor buff marks and scrapes on the cover for the LCD display, but the display itself is perfectly readable with no difficulty. I have the two clip leads, but not the instruction manual.

Priced for immediate sale using PayPal - $75 + $5 s/h via Priority Mail. I want to move this right away to facilitate another PayPal purchase, so I'd appreciate interest from folks who are already signed up with PayPal.

Please reply directly to me via email to na2n@ulster.net, not to the newsgroup.

Used TV/VCR stands.
One on my dest in the radio room, gives me three shelves
of space.
Set up two units together in the Tv room which gives
5 shelves of space
and the wheels make it easily movable.
I used plastic furniture skid tacks on the bottom
of the unit for the radio rooms desk!

Works for me!

Are you testing the tubes an a tester that shows mutual transconductance?
Most tube testers measure only cathode emission as seen at the control grid.
This is not a meaningful test. Transconductance testers actually put
voltages at the screen and plate connections and test the actual function of
the tube, and are much more reliable. Though even these cannot give you 100%
accurate measurements for beam power tubes.

Check the output of your IC voltage regulator. See if it shows any AC ripple. You can do this with a DMM on a very low AC voltage range. Better with an o-scope if you can get one. If there is ripple present, you may have a leaky rectifier diode or a deteriorating electrolytic.

P.S. Check your screen grid bypass capacitor(s) on both the driver and the PA tubes.. make sure you have screen voltage.. it should be a minimum of +250 VDC. Also, your control grid(s) on your PA tube(s) should be in the region of -60 to -80 VDC. Check this with a high impedance VTVM or DMM, a standard VOM will load the high impedance circuit and give you a false reading.

If it's like most modern rigs it uses a ci-v level converter. There are a gazillion different circuits around. Some use transisters only, and can be run with no external power. Some use the MAX chips for all in one deal, but you need external power. No big deal..Wall wart..I'm fixing to build a pair of these. A friend of mine is in the process of coding a new control program for the FT-100. He is also setting it up, so it can be used with other radios such as the 706, etc. You change the "skin" to match the rig. The converters for the ft-100 and the 706 are both the ci-v type. So we can both use the same thing. I suspect you can too. I'm going with the fanciest circuit I could dig up. it uses the MAX 232 chip and seems pretty robust compared to some I see. I think it's about an exact copy of the icom ci-v converter. It supports 4 rigs. I can't remember now where I got the circuit, so I'll just post it on my site so you can check it out. This seems to be the best I've found so far. http://web.wt.net/~nm5k/ci-v-h.jpg

There should be a few around for the charts at least. Not sure on the navtex. Do a search on yahoo for amateur software, navtex, etc. There are a few sites that keep alot of these files, or links to them. I can think of one demo for charts, jvcomm32...But the demo will leave markings on the charts every few inches. You could use the old DOS jvfax, etc. They are unrestricted. Back when I used to copy weather fax every day I used HFFAX. But it's a commercial program. But it made the best pix using an op-amp converter. These days the sound card is the usual device used , so this will influence what you can use. Dunno what converter you are using..I use the puter sound card for almost all that stuff these days. MK

I'm sure your intention was good, but if you go to the mcafee site
(the one your message references) and look under hoaxes you'll find
this message, and it's represented as a hoax. The text is only
slightly different. So what your friend sent you was possibly in
error. I make no judgement of him or you. However, there are a lot
of hoaxes as well as real viruses going around. You might go there
and check it out. It's interesting.

Just thought you'd like to know.

Tony

3222. Re: VX5R battery charging

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-07 08:26:31 UTC
From: Markus Lenggenhager <markus.lenggenhager@nospam.philips.com>
Message-ID: <984ra6$7cj$1@porthos.nl.uu.net>
Source record: 63450

Some facts based on experiences with my VX-1R (don't have the VX-5R) and
generally available info about LiIon cells:
- LiIon cells don't have a memory effect. Charging partially discharged
cells is doing no
harm.
- VX-1R LiIon has built-in circuitry to control the charging process. The
only
thing you have to provide is basically a constant DC voltage (as far as I
remember
it's 6.2V) with a current limitation (think it was around 450mA).
The battery controls the charging process by rhythmically interrupting
the flow of
current. The duty cycle of this on-off sequence gets lower and lower as
the battery
approaches its fully charged state. In the VX-1R this on-off sequence can
be
monitored through a weak clicking sound out of the speaker.
- in my opinion it's almost impossible to maltreat such an "intelligent"
battery
when using any proper charger.

Hi,
Seen a post on the web about the stake mount antenna system by geotools.
I cannot seem to get them on there phone # of 949-759-3166 or get into there
web page.
I e-mailed them a week ago with a question and they answered me back but now
I cannot get them to order a mount.
Do you happen to have any more info on how I can contact them?
Any help would be appreciated!!
Thanks,
Gary N7GB

3230. PRO MONITORING STATION FS

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-07 13:15:02 UTC
From: radiomatt@aol.com
Message-ID: <20010307081502.08302.00000197@ng-cv1.aol.com>
Source record: 63455

Expensive, but worth it!
A complete digital decoder receiving station

THREE VLF/HF RECEIVERS: 2- Icom R-71a with FL-44 filters, rackmounted
and 1- JRC NRD-515 with KIWA filter and 10-turn fine tuning control
MULTICOUPLER: Aiken 108-- One antenna input feeds up to eight receivers
FIVE DECODERS: Universal M-8000, Universal M-6000, Universal M-600, Universal
RTTY tuning scope, 2 InfoTech M-200F units(side-by-side mounted in rack mt)(all
decoders are rackmounted)
FOUR DISPLAYS: Panasonic Professional rackmounted triple 5" B&W monitor, single
SVGA 14" monitor (for M-8000)
SPEAKERS: Three Realistic Cube speakers for receivers
Everything is designed to be mounted in 19" racks except the JRC receiver, the
speakers, the multicoupler, and the SVGA monitor. This is a pro setup in both
appearance and performance.

With this setup, you can connect an antenna, and decode CW, RTTY, FAX, WEFAX,
SITOR, and DOZENS of other digital modes. Check "www.DXing.com" website for
info on the decoders and receivers.

Price $4000 Two black table racks can be added for $200 more.
Location New York

3233. HR2600 Ten Meter Rig FS

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-07 15:27:32 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <Ersp6.3484$oz.364740@newsread1.prod.itd.earthlink.net>
Source record: 63459

FS a very nice Uniden HR2600 ten meter all mode 25/10 watt rig. It runs 25 watts output on SSB, 10 watts on FM and AM.
Comes with original box, power cable, scanning mic(there are two mics that come with this rig). No manual.
Works great. I have worked all over the world from my car. $165 shipped,
Charlie,
K5MBX

Another one I received a couple times is an email message with no address, no signature, no text, nothing except an attachment titled "Norton Antivirus Report". My Nortom antivirus program grabbed it, Id'ed it as a virus and quarantined it. It wouldn't be smart to open any attachments.

3246. Re: VX5R battery charging

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-07 19:27:44 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <3AA68BB0.ADB9F72@cybertime.net>
Source record: 63471

As stated here previously the LI battery does not appear to have the typical memory problems that plague NiCads. So you can top them off, I've done it for over two years on mine now. Also you can keep a spare second battery in the cup all the time if need be.

The best reason I can give you for the battery charging faster in the drop-in charge cup is as follows:

Without the charge cup the battery is charged through an internal regulating circuit inside the radio. It does not have the capacity (current) capibility that the charge cup has. The charge cup makes contact to the battery throught the rear external contacts on the battery thus eliminating the radios internal (less current capable) regulator circuit. The "Wall Wart" power plug-in can handle the higher current of the charge cup. So there you are.

I didn't suggest that it might be a hoax.
I flatly declared that it is undeniably a hoax.

> I did get it from a fairly reliable source.
Formerly reliable source.

> I just passed it on as a note.
You could easily have checked the facts on any of many websites which list this prevalent hoax.
Though it contained so many tale tell signs of being a hoax, that only a novice would be fooled by it.

3251. FT-890 VFO display modifible to show 10Hz position?

You really sure, Tony?? This is direct cut-and-paste from the McAfee site:

W32/Naked@MM (NakedWife Virus) Help Center
W32/Naked@MM is a HIGH RISK virus that is spread using the Windows email program Outlook. The infected email can come from addresses that you recognize. Attached is a file named NakedWife.exe, which poses as a Flash movie. When run, it copies itself to a TEMP directory and displays a window entitled "Flash" which reads "JibJab loading".

Moral of story: Don't open .exe files attached to email.

That is just what I said in my last post. I don't have to worry about
that, I am using linux.

Yes, it will show the extra digit.

The bad news is that mine was enabled when I bought it, so I
am not aware of the modification, but I do know there is
one. Good luck.

3271. WTB frequency switch out of busted IC2 or Tempo H.T.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-08 05:13:20 UTC
From: "Stan Labinsky Jr." <stanbarb@warwick.net>
Message-ID: <3AA714F0.97B976D7@warwick.net>
Source record: 63497

Hello:
I'm looking for the frequency selection switch out of either an old Icom IC2, 3, or 4 or an old Tempo H.T. for a project.
If the switch is still in the radio, the rig MUST be shot... otherwise I'll probably try to fix the thing... I just can't help myself. ;-) Of course, the switch has to be one of the good parts. :)
Or, if you just happen to have one of those switches in your parts bin, a three position Ultra Miniature BCD or Octal thumbwheel switch of the same size as the ones in those H.T.s, drop me a line. Actually, Octal... a three bit binary switch would be preferred but it must have three digits complete with the end caps.
I'd also be interested in a good source of new switches, I have done some looking around and have come up dry so far. BTW, does anyone have Icom's parts 800 number?
TIA... 73, Stan

Spammers take note... the Email addy is good... I just use the delete key a lot... besides, I get lonely here in the swamp so even junk mail looks good after a while ;)

I believe that the "NakedWife" virus that you refer to might well be
real, but I was referring to the "VirtualCard" one that he referenced.
I thought my message was pretty clear - maybe not. Notice what I had
in parenthesis.

But I agree totally with your moral. I even carry it a bit further, I
don't open *any* attachments without careful steps, and running a
virus protection program. And I still got hit once.

Tony

Source record: 63501

Hello again!

I hope you are not definitely bored of me and my ramblings about the 901... but it seems this will take still some time... read on to find why.

First the good news: I have my 'EPROMized' COUNTER unit working :-)!. Yes, finally, after some last minute modifications (as adding pull-up resistors to the EPROM address lines), I have a working MHz display. So, in case somebody has any trouble with the unobtanium diode array ICs, you know there is a solution, readily available. In fact, same solution could also bypass the 40192 counters and go directly to the BCD-to-7 segment drivers, but I wanted to left as much original circuits as possible. Then the COUNTER was put on its location and the rig was powered to show its nice red digital display / blue analog display combination. Every band worked fine on receive. So it was time to check the transmitter section... and here came the troubles!

As I had removed the driver and power tubes, first check involved putting back the DRIVER tube. I plugged it on its socket and powered HEATER circuit. It glowed nicely. So, let's try the FINAL tubes... Again, HEATER ON and... no glow!... hmmmm... Then I remembered something about the ACC plug and the filament power. My 901 arrived without the ACC plug and I had not dealt with that yet. So it was time to manufacture a replacement. I found a suitable 11 pin connector in my Heathkit HW-101 parts stock (as it is the same connector it uses for power supply) and put the neccessary jumper at pins 1 and 2 and also the AGC 12k resistor. Once plugged, I could get the FINAL tubes glowing.

Well, what about reading the manual for TUNE procedure ;-)?. Once there I read about MOX and Ic idle current (50mA). Pressing MOX did not show any Ic. Checking the voltage at the PA tubes I found that the bias voltage was fixed at -135V intead of going to about -65V on transmit... After some more schematics search, I checked the TX12V line to find that it was not working at all. Further work revealed that this voltage is switched by a relay, which selects RX12V or TX12V line from a common 12V line. RX12V was present and in fact switched on and off with the PTT. So I got out the relay to find that it had about 2 kOhm at the contact which should let pass the TX12V line. I 'fixed' it temporarily (I need a new one, any available?) and then got an Ic indication, which was adjusted by the BIAS voltage pot to 50mA. So I had iddle current... now I checked with TUNE button and then cranked up CARR, as the manual indicated.

Nothing. Same reading (50mA)... and then PANIC MODE ON!. Some smoke came from the rig; just a bit, but something was burning close to the front panel!. I switched off the rig and looked for visual damage. Nothing. I thought it should be something in the TUNE PCB, but could not see it. So, after a while, I decided to power again the rig. No more smoke. But something was fried, for sure... I should investigate this later.

Suspecting of the TUNE function work, I injected an audio signal to the MIC input, and followed its path when PTT was activated. It vanished just at first module, CARRIER. In order to be sure, I checked with the other 901 (the one which works) module and it was a definite difference. So something in the CARR module is shot. Well, another thing to the queue!. I left the good CARR module on the rig but still no output. So I followed the signal path to the FILTER unit. It arrived there... but, again, no output. Culprit should be another 2SK19 transistor (it would be the third one faulty), as is the only active component in the transmit path. Again, swapping it with the good 901 module fixed the fault, and I got a nice SSB signal out of the FILTER unit. Then it goes to the RF module which seemed to work fine (not common on this rig ;-)!) and then to the DRIVER tube. It was amplified there and, at IF OUTPUT jack on the rear panel, which is what a sample (reduced amplitude) of what the POWER tubes get as input, I got a good signal. But still no output from the PA tubes.

So this is the current status: it seems signal now arrives to the FINAL unit but it is not amplified. As voltages at the PA tubes are all fine, I guess tubes are bad. But need to check in detail for signal levels before discarding the tubes (which, on the other hand, will be checked on the tube tester). And I need to deal with the CARR unit, FILTER unit and the charred (and yet unlocated) component(s)

Now you will understand why I said at the beginning of this message that this seems to be still a long story...

All in all, I am still happy, as the repair is progressing. But, trust me. If I was a professional and had got this rig for repair, the invoice would not be cheap!

Best regards,

JOSE

I've evaluated how it plays, which is why I bought it in the first place, and which is to say well on my mediocre antennas, and am interested in either selling it outright, or, as suggested by one individual, trading it and some cash for a late-serial FT-1000D with c-w filters.

Only negative comment: I'm reactionary enough to prefer knobs to menus.

Any interest out there?

I am looking for CB radios and walkie-talkies from Raytheon,
Apelco, and Webster for my personal collection. Any model,
any condition will be considered. Also need crystals, hand
microphones, mounting brackets and hardware, manuals, sales
brochures, service information, magazine ads and reviews,
and so on.

Drop by my Raytheon CB web site for a bit of interesting
and off-beat historical information, photos, etc!

http://www.qsl.net/k5dh/raytheon.html

Before I get "bashed" for posting CB-related stuff on the
amateur radio newsgroups, I must point out that the HUGE
majority of equipment and historical information that I've
been able to acquire so far has come from HAMS, not from
CBers! Many of today's hams were CBers "back then".

3283. TS-520S Tune Up Question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-08 20:03:50 UTC
From: LG@antispam.com
Message-ID: <3aa7e2ff.8527355@news.accessnv.com>
Source record: 63509

I am a new ham and recently acquired a Kenwood TS-520S
and have a few questions.

When I tune the finals for a particular band, how far can I
move away from the frequency that I tuned up on before
having to re-tune?

Once I tune up into a dummy load, must I re-tune after hooking up the
antenna?

This radio is supposed to put out 100 watts. Is there a way to run
less wattage? If so, how low will the power output go?

Thank you for any replies.

3285. AH-4 and stainless whip

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-08 20:13:25 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3aa8f50b$0$1630$bbae4d71@news.net-link.net>
Source record: 63398

My Icom AH-4 coupler, spring and whip, works pretty well (considering what it is) on all bands from 7 to 30 MHz, however, 6 meter performance is down with the long whip. The rig cuts back in power to about half, if the IC-706MKII meter is accurate at all, and the meter swr says under 1.5:1 or so, once in awhile, 1.7:1 and every now and then I will get almost 90% output.

According to Icom AH-4 coupler instructions, half wave antenna lengths and multiples should be avoided. Well, 6" spring and 102" whip is a half wave on 6 meters (52.000). So I added a foot to the base of the whip above the spring (total length now 124" well actually about 130 inches if you count the feed wire from the coupler to base of spring). Coupler now is matching a bit better, especially down where I want it (50.125), but still less than 75% output according to rig meter, and I do whack more overhead stuff. I have not put a "real" meter in line to see what the actual results are, but anyone have any ideas. System works great for what it is on HF and tunes a Hustler 75 coil on a short mast just fine. Other than swapping in a 54" whip (coupler loves it!) is there any point in trying anything else with this antenna/coupler setup? What about putting a small disc between the 12" bottom mast and 102" top whip, sort of a little cap hat? What about a small disc on the whip itself, say about 4 or 5 feet above the vehicle? It would still be fairly safe from hits here. Top hat is out of question where live, unless, I could make it out of springs or the like.

***I had the unit many many years ago and believe about 50-75 khz was
about where I had to retune. Maybe 100. But it was just a slight
peaking that was required.

I would, just to ensure there is a good match to the antenna after
tuning the dummy load. Again it should just require some slight peaking.

Cut back on the drive control. That radio, as I recall, did not have
a separate knob for power output.

Good luck.

Untuil someone comes up with a beter answer.
You should be able to go 15 or 20 KC or more before you need to retune
the radio.

Unless your antenna is unusual you will usually need to touch up the
tuning when going from a dummy load to the antenna.

For PSK-31, you need: audio from the rig, audio to the rig, and PTT. The REMOTE connector (7-pin DIN) on the back of the rig will give you access to the PTT and the audio out. The microphone connector on the front of the rig can give you access to the PTT and audio in. The headphone jack can give you access to audio out.

The TS-440 and TS-450 will let you access everything through the back of the rig, but for the TS-430 you have to use the microphone port. I think there was an article in QST last year about constructing a PSK-31 I/F that plugged in between the microphone and the microphone jack to let you select digital modes or the microphone.

The mic jack is certainly easier to wire than the 13-pin DIN used on the TS-440 and TS-450.

Good luck. PSK-31 is fun!

I've seen 200 watt inverters at Sam's club for about $40. You can also buy
new ones at J C Whitney - the automotive parts mail-order place.

"Why buy used, when new will more than do?"

Hi,

I have a new set of FT 757 GX (not GX-II) manuals. Operating manual and also have the technical supplement (service manual) with schematics.

I thought I had lost my old ones so ordered from Yeasu a few years ago, then found my old ones.

$24 postpaid to your door.

Thanks,

Bob

3298. Is the G5RV still one of the best all banders?

you can move about 20 - 25 Khz before retuning, but I never went
much past 15 Khz

> Once I tune up into a dummy load, must I re-tune after hooking up the
> antenna?
>
Just set the meter for RF output and check the dip & load- your antenna
is rarely the same impedance as your dummy load.

> This radio is supposed to put out 100 watts. Is there a way to run

>
Use the MIC & CAR control knobs - MIC for SSB and CAR for CW. Tune
them counter clockwise to reduce your power output.

> Thank you for any replies.

Press and hold "BAND/MEM UP" whilst turning on the power switch.

Changes display from 100hz to 10hz.

Does not effect your tuning steps!

Icom does not have #800 numbers for retail customers. The #800 numbers
are for dealers to place product orders on. The parts number is
425-454-7619. The 2AT BCD thumb wheel switches are still in stock

I can't say enough - good things - about my W9INN 5-band resonant dipole.
Bill does a great job on these antennas and in fact markets many other ones
besides the model MPD-5 which I use. It has trap-like features that use no
physical capacitor.
Bill calls them " resonactors " The antenna provides a resonant dipole on
10-15-20-40-80M. Bill has no website bit I do have a link to a picture of
the MPD-5 and address and tel # for Bill (W9INN) for more info. I can
testify the antenna works fine as I have nearly 290 (288)
DXCC countries on this dipole array. Bills info on the Ham Radio Links
page of my site listed below....

Hi Bill,

I bought mine new from WB0W- advertises in World Radio I think- $179. I see guys asking this much for a new one- about a year ago. Of course, it is out of cal already and the bandswitch is shot- I buy them 3 at a time and replace them myself.

One SMALL detail!
Watch the polarity of those two primary coils!!! If you connect them the wrong way, you'll pop a fuse... at the least.
Best to connect a 100 Watt light bulb in series with the line to the amp... you can then safely test both connection schemes... the one which lights the lamp the LEAST will be the right one.
The reason: If you connect the windings together the wrong way, the field from one will cancel out the field from the other. There will then be only the winding's resistance to limit the current being drawn from the line... or "line current". Transformers, AC relays and contactors (high power relays) rely on inductive reactance to limit the line current, relays and contactors have a "pull-in" current (the current needed to initially move the relay's armature) as high as ten times their "sealed" current (the current required to hold the armature in place).
If there's not enough difference in relative brightness pull out the big tube; this will remove the load placed on the transformer by the tube's filament current... the difference should then be more noticeable.
Good hunting... Stan

Hi, G5RV has never been a allband antenna. G5RV has bad SWR an almost all bands. It is mostly useless without a tuner. An all bander should work without tuner. Answer: No, it is not even a all band antenna.
/Best regards SM4WII, Kristoffer in Lidvika

Hi the nice thing with Litium Ion batterys are the thing that it doesn't
matter how much you misthreat it, it's still doing just fine. I charge
mine battery every evening, and no sign of less working hours
/SM4WII Kristoffer

On Tue, 6 Mar 2001, Rudy Marcelletti wrote:

larven@linux.nuAt $50 to $70 for a battery, I want mine to last a while! Can you damage
larven@linux.nuthe VX5R Lithium Ion battery by "short charging" it with the supplied wall
larven@linux.nucube or optional fast charger? That is, I just want to "top off" a
larven@linux.nupartially depleted battery.
larven@linux.nu
larven@linux.nuWill the charger do a complete charge cycle or just top off the battery as
larven@linux.nuneeded?
larven@linux.nu
larven@linux.nuWhat if I take the radio after it has been charging for a while, but
larven@linux.nu"complete" is not on the display, and use it some, then hook the wall back
larven@linux.nuup to it? Will it resume charging where it left off, where the battery is
larven@linux.nunow, or start all over again? Just how smart is the "cube" or the radio
larven@linux.nuanyway?
larven@linux.nu
larven@linux.nuHow does the quick charging stand charge the same batter faster out of the
larven@linux.nuradio than in the radio using the same wall cube? A friend has one and he
larven@linux.nusays the "now charging" and "complete" messages do not come up on the
larven@linux.nudisplay if the radio is in the charging stand, but the batter charges
larven@linux.nufaster.

Jeff,

If you have the space for it, I'd suggest a dipole cut for the bottom of 80 meters (overall length approx. 136 feet), fed with 450 Ohm open-wire feeders, and tuned with an antenna tuner. It will work all bands from 80m through 10m. Cheap and easy!

The PK-232/MBX at firmwre level 7.133 or 7.2 has the following
enhancements:

Mailbox
Pactor
APRS/GPS support
Gateway.

The PK-232/DSP

Is a PK-232/MBX with an internal DSP processor that provides DSP
filters for all modes of the PK-232/MBX. For those doing Pactor
traffic, RTTY contesting and digital work in crowed bands and/or weak
signal conditions it a must.

Thanks Mark,

I appreciate the info. I've done some digging in the interim and came up with several designs and took the best from some of them. I modified the schematics that utilize the MAX232 and replaced it with the the MAX233 (no external caps, all integrated). I've designed the PCB and I am in the process of constructing it now.

Thanks again....

Hi,

I have a Kenwood TM-V7A 144-440 dual bander with an interesting problem. When tuned to a signal, the audio is low and distorted. However, if I tune to 5 or 10 khz either side of the signal, it comes in almost normal. Anyone ever hear of this before? Anyone know of a fix I can do instead of sending it in for repair?

Thanks,

Ken Knapp, N3GBW

Sounds like the discriminator has become detuned, possibly because of a filtering electrolytic across it's output. I can't tell you exactly where to look in that particular radio... but that should give you a starting point.

To further confuse you, there was also a 520SE and a 520SES (I think). One had 160 mtrs and the other had only 80 mtrs. Also one would go mobile with a plug for 12 volt operation (mine would do this and was terrific for emergency power, used it after an ice storm, this was over 20 years ago,..ergo my confusion on all the 520 models.A really all time great rig. I wish I had mine back.

You might check and insure the unit is not inadvertently in AM in stead of FM. That is how FM sounds when you tune it in using "slope detection" using an AM radio.

From: mrbill@mrbill.net
Message-ID: <slrn9aiuj9.lej.mrbill@ohno.mrbill.net>
Source record: 63419

I got a new FT-840 a couple of days ago, and am using it for listening in until I get my General upgrade completed.

I've got one question tho - is the "AM/N" button for AM mode selection ever completely disabled? I can go back and forth between SSB (USB/LSB), CW, FM (no board installed, tho) just fine, and AM seemed to work for a while, but now the "AM/N" button doesent even make a beep....

I'm sitting on hold to Yaesu tech support right now, but I dont think I'm going to get through before they close at 5PM PST.

Is there a power-up key sequence to completely reset the radio? I fiddled with the combination of holding down FAST and AM/N a couple times to adjust the beep tone, but that didnt seem to have done anything.

Any help will be greatly appreciated.

Thanks.

Has the DCS and CTCSS decode built in but it is kind of negated by the no crossband rpt. I'm wondering if there is a mod for it? They might have wanted to keep sales and price of the 8100 up so they didn't want a rig that does "everything"???

: AL

The 101 is the original of the series. The E versions have the most
optional equipment. The EE is like the E, but lacking the speech
processor. The EX is the stripped version. The ZD is a different
design, and has such nice things as easily accessable VOX controls
and speech compression levels, two levels of rf attenuation, adjustable
agc rate, adjustable noise blanker, digital and analog frequency readout,
two CW filters, adjustable notch filter, all the WARC bands and SQL,
along with the features you find on the rest of the 101 series.

I had that happen a few times with mine. I thought it had something to do
with other radios in the car that when transmitting overloaded the CPU
of the TM-V7A and what brought it back to normal was a full reset. Hope
you have cloning software if that is what it needs.

I have two Bird 43 inline Watt meters for sale. Both come with the
shorting plug, but no case or elements.

The first one is in near perfect condition, with no scratches, scrapes
or dents, and only two tiny spots where the paint is missing. Also, it
has the PL-259 connectors. I would like to get $170.00 plus shipping for
this one but will consider offers.

The second one is in good condition, but does have some wear spots: no
dents, but some paint is chipped and shows signs of use but not abuse.
It has 'N' connectors. I would like to get $160.00 plus shipping for
this one but will consider offers.

I have several elements avalible: 100C for $60, 10D for $40, includes
priority mail shipping and insurance. I may decide to sell some of the
other element I have so, inquire if interested. Also, I have pictures of
all availble.

These days it's usually for the aircraft reception more than anything,
unless maybe it's an all mode rig. I'm not familiar with that model.
Most have the wide range rcvr's that cover aircraft. Most of the comm's
are in the 118-138?? mhz range. MK

> C. Jespersen K2OG

The only problem with that is on some bands you will have quite a bit of loss using that coax. Granted you will likely still be able to operate, but much power can be turning into heat. 40 meters would be about the worst case. With the high impedance feed of the two half waves in phase, your swr will be very high. If you had a 40:1 or worse swr, much power is going to be lost as heat in the coax even though the rig is happy. If you use the ladder line the losses are so low that even with a high SWR the loss doesn't amount to a whole lot. Myself, I second Deans suggestion. If I wanted an all bander one wire antenna, I'd run a 1/2 wave dipole for the lowest band to be used and center feed it with ladder line using a tuner. Or you can also switch in and out cut length feedlines to match without a tuner, but might be inconvenient. If you use a good tuner with 450 ohm line, the loss on all bands is pretty low as long as you use the least inductance to match. The coax is ok as long as you don't get over about a 5-10 to 1 swr. Anything over that and it can get pretty lossy. Also it helps that you are using the bigger RG-8. The smaller RG-58 is much worse when the SWR is high. I don't like g5rv's in their normal config with the 300 ohm lines/balun/coax mess for all band use. No need for all that extra stuff and just causes more loss in the feedline. Even G5RV himself used to say this. The g5rv antenna originally was designed for 20m use. MK

From: radiomatt@aol.com
Message-ID: <20010310063745.09522.00000336@ng-mr1.aol.com>
Source record: 63433

I brought one of these beasts to the Lindenhurst hamfest this past weekend. Another guy sold his for $750, but I was in a back room and there was little traffic! Anyway, I still have the two units, and was hoping to sell them as a pair. Both work.

No. 1 has a nameplate by Collins, original meters, top and bottom covers, and original cord. The panel has the paint worn off around the main tuning knob. Price $550 (picked up, $500)

No. 2 is missing the covers (top & bottom), the power cord, and has no name plate, but the front panel is in better shape. Price $450 (picked up, $400)

Both work, knobs are all original, and overall the radios are 7 on a scale of 10.

If both are taken and picked up by a single buyer at the same time the price is $825 for the pair.

I live in the Hamptons, 113 miles from the Manhattan, mostly highway.

3359. FS: Rubber "doughnut" for Drake (behind tuning knob skirt)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-10 11:55:38 UTC
From: Neil <DontDoIt@ImNotHere.com>
Message-ID: <dd5kat87p9m5b8kv9sg2hnov9fev1frm6u@4ax.com>
Source record: 63435

rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap

Has the little rubber "doughnut" behind the tuning knob/skirt on your TR-7 (or R7/RV-7/RV-75) gotten all dried up and stiff? If your radio is like most of them, unless this doughnut has been replaced recently it now looks like it's been "baked" and doesn't function very well (it needs to be supple and rubbery for the zero-adjustment to work/feel right).

I have the perfect replacement part, brand new. It's made of the same material as the factory unit, same dimensions, and works great. I even wrote up clear, step-by-step illustrated instructions showing how to do the job, with pointers on what to avoid.

To get your doughnut and instructions, send $2 to:

Neil Rosenberg, K1VY
60 Plain Road
Hollis, NH 03049

If you want 2 or more they're $1.50 each, shipped.

Satisfaction guaranteed, of course. By the way, they also work great on 4-line gear!

Email to K1VY@arrl.net or call (603) 465-2788

Thanks!

3379. cheap dual band rigs

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-10 20:47:54 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3AAA92FA.D0D509BC@dialpoint.net>
Source record: 63304

I am looking at several of the cheaper dual band rigs and have several questions about them. The ones are the single display modles except the Alinco that has a dual display. I have marked it off the list as while it has a bunch of memories there is no way to lock them out so I can only scan the ones I want. Hard to scan with a weather frequency in memory and the thing locks up there and can not be programmed to skip it.

Do any of the other dual banders lock up like that or can I program them to skip the WX frequency that I have stored in the memory ? Also while the rigs are single band at a time, can the memories be programmed for both bands and will the rig scan the memories of both bands ?

GeoTools? The web site looks like a software provider to me OM. I bought a nice stake mount at the local CB shop and put a 40 meter hamstick on it. It cost about $15 and fits about any stake hole on any truck. Results were fantastic. Don't fall for expensive imitations.

3387. Antenna suggestions?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-11 00:56:35 UTC
From: Brenda Ann <brendaannd@uswest.net>
Message-ID: <98eia2$e2n$1@news2-2.kornet.net>
Source record: 63313

I am about to go on the air for the first time on HF (40, 20 and 10m) and I have some interesting limiting factors for antenna.

I live in a densely populated (here everywhere is densely poplulated) small town in Korea (US ham). I am on the second (and top) floor of an apartment house. We have a flat roof, with a retaining wall surrounding it. The retaining wall is topped with heavy brick tile (not attached in any way). There is no open spot on the ground on which to mount an antenna, and no way to put up a vertical on the roof (very high winds much of the year, and no place for guy wires). I also have to be concerned with RFI to the neighbors. Anyone have any suggestions as to what I can do for an antenna? I will be running a TS-520S with about 200 W PEP. I will, however, adjust the power to the lowest possible level needed to make contacts.
TIA

On eham.net in boat anchor forum check out kenwood 520.

I just picked up a used 520, clean good radio.
No warc bands, cw and u/l sb only, can operate from 12v dc
with connector wired up for it.
Used 8 and 9 pin radio tube sockets for external accys (vfo)

520s used din connectors instead and did not have 12v dc dc
convertor buitin. You could add that option from service book
(had schematics).

520 had white panel for subband dials, 520s had gray with smaller led.

hope this helps you out.

I own two RLC3s...yes they do come out with updates...based on owner's request and cleaning some problem...but Steve and Allan have a great product line....Be aware the RLC 4 does NOT do multi-tone generation..(like dialtone, etc) it only does a single tone at a time...in case you wanted a CT that sounded like dialtone

There are also 2 list servers for the Linkcomm products and one for the SCOM..(the 2nd Linkcomm server is not run by Linkcomm and is not moderated)

If you are looking for multiple links, look at the RLC 2 or wait for the new board for the RLC Club that will make it a 4 or 5 port controller...less than $1000 total. You could buy a Club now and add their new expansion board later (the Deluxe board currently available only adds one more port)

3402. Re: North Shore RF TECHnology VHF duplexer?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-11 05:41:57 UTC
From: cboone@earthlink.net
Message-ID: <3AAB119F.59CD0BCF@earthlink.net>
Source record: 63328

North Shore Technologies was a short lived company in the 70s..
73 Magazine was a frequent spot for their ads...their duplexers
did have good specs and excellent construction from what I remember.

I THINK you can look in the ARRL FM&Repeater Book or any ARRL Handbook
and see the details of their homemade cans which I think NorthShore
copied. The cavities ARE 50ohms...the line lengths primarily are freq
dependant to allow the cavities to perform correctly.

I BELIEVE the lengths are 1/4wave on one side and 3/4 wave on the
other side of the T (taking velocity factor into account)...
Again check the ARRL publications mentioned above and I think you'll
find the info that will help.

From: Ed <edgait@earthlink.net>
Message-ID: <3AAB1798.DDFE75A@earthlink.net>
Source record: 63331

I would stay away from a used VX-5R unless it is a fairly recently made one. The early VX-5s had software problems and other teething pains.

The VX-5 is such a great radio, I would wonder why someone would want to sell one. Perhaps it has problems or had been dropped or other issues or it had gotten wet or whatever. When you buy from someone on-line, you get what you pay for and there's no guarantees.

Most dual-band HTs are gonna run between $200-300 anyway so pay a little extra and get an exceptionally great radio. You should be able to get a brand new VX-5 for around $325 or less. Try Jun's or maybe AES, Texas Towers or other merchants in the back of QST or other ham magazines.

I left CB radio 19 years ago when I got my novice ticket. It felt good communicating with people that knew what they were doing and were proud of their accomplishments in getting licensed. Over the past year things have gotten shitty on the bands and operators are stupid. It sounds just like the CB I left 20 years ago except that the rig's readout is showing a ham frequency. To bad there isn't a better radio service I can go to now that the bands are full of idiots. Thanks FCC, Thanks ARRL, I'm back to 11 meters in the middle of a ham band.

3411. Kenwodd TH-78A vs TH-G71A

Date: 2001-03-11 11:02:54 UTC
From: Land Rover <worst4x4xfar@mighty.co.za>
Message-ID: <3aab5c44$0$227@hades.is.co.za>
Source record: 63338

I have an old TH-78A with wide band receive.
I have been looking at the TH-G71A and on the surface can not see much difference between the two. Certainly not enough to rplace th 79 with the 71.

Am I making a fair comparison or would the TH-79KSS be a better model to compare to the TH-78A?

Thanks

Joel ZS6CBA

Sure you did. The fact that you posted this message to nine newsgroups, used a fake identification, and made numerious false statements about ham radio, clearly shows this as an attempt to stir up trouble instead of voicing an honest complaint. If you want to stir up trouble, try not being so transparent next time. Until then, you rate less than a one on the old troll-o-meter.

Hi hall

I have found a coupler antenna type CU-421/SRA-15.
It is in very good conditions but i have not specifications for use.

Anyone know it ? Can help me ?

Thanks

I'm not sure I would do that, I've owned both and the B&W isn't much
more than a dummy load. G5RV's are ok, but you can't beat resonant antennas
on each band. It can be impractical, but they work much better.

Looking for the following (have stuff to trade; contact directly)

GE MSTR EXECII station or mobile 42-50 MHz (combo number ending in 33)
Prefer one with NB (N before the 33) 50-100watt level

GE MSTR EXECII mobile on UHF (88)....any power level will do...

OR GE MVP on Lowband (42-50) if there are any of these rare boxes..
prefer to have NB in it...any power level

Please contact me directly! (if you are willing to trade for something,
let me know..the storage place HAS to be cleaned out anyway :)

Thanks!

Need to know which Icom mike & which Alinco radio. (HF - VHF ??)

There are some web sites that have the mike pinouts for all radios
for connecting TNC's & such. I know you don't want to do that, but
it would show you the pinout you need to configure a mike cable for.

I'm sorry I don't know which web sites - a search engine would pick
them out or you might start with the links from www.qrz.com or some
other large ham radio site.

FB on going to HF! Ham radio has so many facets -- the more you try,
the more you'll enjoy it.

Don't give up on that roof -- it's prime real estate. You have lots of
options.

For 20 and 10, you should easily be able to put up a full-size, 1/4-wave
vertical, and you could probably put up a shortened one for 40. Any of
the mobile antennas, from hamsticks to bugcatchers, should be pretty
easy to put up and should perform well with a few radials on a
second-floor roof.

You don't need anchor points to "tie" things down. You can do a lot
with weights. When I lived in Maryland, our club served the Red Cross
and had some substantial antennas on the roof of the chapter house,
including a TH6DXX with a rotator on a short mast -- all held in place
using weights. You may have to lug a lot of concrete blocks (or
whatever) up there, but it's not too hard if you do one at a time.

Putting your stuff on the roof instead of in the apartment or out a
window will actually help to minimize RFI. It's good to have the ham
antennas above the others. Just be sure to decouple your feedline with
a choke up on the roof.

... Rich

Hey Fellow Amateurs...
Do you have a Senior family member or disabled person that wants to
LIVE AT HOME and NOT an expensive resthome???

Do you have a friend, spouse or loved one who live's at home alone
and wants both SECURITY and MEDICAL monitoring FREE OF CHARGE?

Peterson & Associates has aquired about 100 of the long sought after,
NO MONTHLY fee, WIRELESS Pendant, emergency Console systems!
These sell RIGHT NOW through Retirement Groups nationally for 199.95

See our web ad.... www.ratestuff.net/medical.html -they sell there
for 69.95

Read on to get yours through our Ham Radio sales outlet-dealer in
Salt Lake City, Utah for 59.95, plus shipping and any taxes
applicable.

These are Complete Security and Emergency Medical HELP Dialer -
Console
systems that consist of a 100' Wireless Pendant that a Senior or
disabled
person can carry around the House. These are GREAT for Parents, the
Elderly or anyone that wants to stay at home, giving family members
a peace of mind. These are provided to monitor an alert Friends and
Families
through an emergency dialing system, witout ANY MONTHLY MONITORING
FEES, EVER!!

These are like the "HELP I"VE FALLEN and can't get up BUTTONS"
advertised
with 30.00 per month monitoring fees, these units can be programmed
easily with up to THREE Family members telephone numbers, or even 911
or Police where accepted.

Once the panic button is pressed, the console dials out and delivers a
pre-recorded emergency message to your loved ones.

These UNITS are for sale to Ham Radio Families and their friends for
a special NET price of $59.95, plus tax & shipping.
VISA, Mastercard and ATM cards now accepted!!

Just ask Bob for the special price on the PANIC DIALER's

Then you need to get a new meter. His meter detected a troll, period. Don't you think that something as dumb as a meter would register a 10 on, as you say, something as transparent as "ARRL's" post? Also, try using your spell check. When a person flames another but in the process misspells a simple word as "generous", they tend to lose all credibility.

3437. WTB FT-902DM PARTS

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-11 19:16:40 UTC
From: "Dennis A. Homerick" <w8nw@richnet.net>
Message-ID: <3aabce7f$0$53492$6d56d994@news.richnet.net>
Source record: 63363

Thanks for reading this message. I need a good or new power transformer for my
FT-902DM transceiver or a new home for a parts rig. A nice radio with all the filters, DC to DC converter. This is my backup radio. My FT-1000MP has been at
factory since the first of February. Guess I'll get my 807 out of closet!

Dennis, w8nw

3451. Re: cheap dual band rigs

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-11 22:12:02 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3AABF832.5321B5F4@dialpoint.net>
Source record: 63378

I am sure that you know what your rig will do, wish I had gotten this before I went to a hamfest today. I was at one yesterday and the Alinco man told me it did not have the ability to lock out memory channels while scanning. One of their 2 meter versions I won at a hamfest a while back could not lock out the channels so if I programmed the WX in one channel, it stays locked up there. Did not want to get into that with a new rig.

Guess they lost a sale because they did not know their equipment. I tried to download the manual from their website, but after it downloaded it would not open. I had just downloaded the Kenwood manual the night before so it wasn't something wrong on this end.

Help!

I have a Wilson WR-1000 Rotor and control that have never been used.
Unfortunately,
I need a 10 pin connector to fit the old Wilson WR-1000 rotor and the
documentation/manual for the rotor and control box.

"I think" I have a connector, or at least I had one, but can not find it.
I never did have a manual.

I'd greatly appreciate any help.

If any one responds, please copy me via e-mail as I don't always get to see
replies on the newsgroups.

Jeff,

Custom shelves aren't all that hard to do.

First thing is to figure out how much weight you are going to have on them. If it's light stuff like TNC's and VHF radios then particle board will probably do ok. If you are talking HF gear and a 1 KW amp or two then you may need something a bit more sturdy. Computer monitors are also in the "need a good strong shelf" category.

Second thing is to work out a simple layout. How many shelves, how far apart. Three shelves three inches apart or five shelves at five inches. Depends on what you have and how far you want to reach.

I generally use 12" pine board for my shelves. Home Depot carries it and if you get the number 2 kind it's not to expensive. If you want pretty then go for the number 1 stuff. They will cut it to length for you so you need to plan out what you want to do before you get there.

To space the shelves apart the previous message about bricks works fine. So do common 2x4's set at each end of the shelf. A couple of nails and a little glue finish it out. If you want to go nuts and cost is no object 2 inch thick walnut makes nice end spacers. Contrasts with the pine ...

Price done the cheap way is about the same as a pre-built, but you get to customize the size and spacing to fit what you want to do. The pine board seems to take screws better than the particle board if you eventually want to attach things like mike brackets, VHF control heads, mic booms, weather station readouts, scanners, and other misc. junk. (Yes, I have at least one of all the above screwed into my shelves here ...)

I hope at least some of that made sense ...

3462. Recycle Turner Plus Three desk mic on ICOM 746?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-12 02:32:32 UTC
From: cuti@tiac.net
Message-ID: <3aac2ed0.127546712@news.tiac.net>
Source record: 63388

Hi,

I just got an ICOM 746 and I would like to replace the stock hand
mic with a desk mic. I am thinking of getting the ICOM SM-20, but
I'm going to need to save up my pennies again first ;-)

In the mean time, I happen to have a pristine Turner Plus Three
transistorized pre-amp ceramic mic that's been sitting around for
years in a box. Is it possible to wire this microphone up for use
on an ICOM rig? Has anyone ever done it? Would anyone
ever want to? :-)

Here is some information from its spec sheet:
Sensitivity: -23 db,
Output Impedance: 5K ohms
Amplifier Voltage Gain: 0 to 33 db
Switching: "electronic" or "on-off relay"

Any information, comments or criticisms will be greatly appreciated.
Thanks.

Source record: 63389

I have an IC 775DSP for sale. Rig has all the filters, including SSB, and cascaded 250Hz filters. You can check the qualifications of the rig at icomamerica.com. It's Icom's top of the line radio, and mine has provided many happy hours of use, including contesting.

The rig had some audio circuit damage caused by a power surge from lightening, and was repaired by a professional electronic technician. Damage was about $50. I have purchased a 756Pro, so dont need 2 great radios.

Rig has been burned in for over 2 weeks since repair, and has been used on CW, phone, and PSK31. It's operating very well, and is stable with no signs of problems. It's on the air now, and I can do an on the air test. I will provide a 30 day guarantee as well.

Asking $2295 OBO + shipping, and will deliver within 100 mile radius of Allentown, PA. To check who I am, go to QRZ.com and enter "WF3H" into the call sign field.

If interested, call Bob at 610 261 9137, or email to WF3H@PTD.NET.

I've tried this mike on both a Kenwood TS-850 and a Yaesu FT-920. It works OK, but I don't care for the audio quality. My favorite mike for either of theses rigs is a Kenwood MC-60. However, your results on an Icom may be different - give it a try...

I for one got my start in CB and made some pretty good friends. A group of us studied for our Novice ticket then went on to a Tech, Tech Plus and now a General in the last year.
Yes, I too can see why someone would get a little discouraged at times. Nothing is perfect. I can tell you though that I'm having the time of my life on the HF bands and just about every new contact I make couldn't be more pleasant. I think you're missing something here.
Maybe you'll be happier on 27 MHZ or the new "Family Radio" channels.
If you think Amateur Radio is waisting your time then you don't have a minute to lose getting back on CB.
10 Zed 4. I'm goin 10 zed 7 Good Buddy.

Seems like most all of them should be able to do that. Or 90% anyway. My
old yaesu ft-470 dual band HT is able to skip channels. Also dual
display and receive also. You can even scan both bands and receive both
at the same time. And it's getting to be a pretty old HT these days. So
if one of these newer rigs were not able to do most of that, I'd be
wondering.. MK

It's ok. Most will work ok as the length is so short. Of course, the bigger and the better shielded the better. So the 213 would be the best . But of course, it's a little harder to work with as it doesn't bend as easy. The 6m use is the only band it would really matter in his case. It could make a difference on that band. But probably wouldn't be drastic as the run is so short. The shielding is real important in a mobile, so you don't want to use any cheap stuff. I've got 8X in my car, and good 58 in my truck. But the length is probably not over 8 ft for either. I'd use the thick stuff, but it's kind of a hassle running around in the car. MK

Abe Collins wrote:
>
> What were the differences between the TS-520 and TS-520S? Thanks!

The 520 was the first. 80-10m. Had dc converter on the back standard. The 520s was the next model out. Had 160-10, and the dc converter was an option. A few slight visual differences from the 520. The 520SE was the "economy" model as was the last 520 model for the USA. It was missing a couple of things that the 520s had. I think one was a lack of being able to run the dc converter. Forgot what else...I've had a 520 and a 520s. Both good, but to tell you the truth I think the original 520 had the smoothest audio. Really nice. The 520s is ok too. I've had a 520SE here once to overhaul, and it was ok, and I did a full alignment according to the book,but never could get it to sound quite as good as the 520 I had. "Also in the shack at that time to compare". It was ok, but just not quite a smooth. Not sure the reason...Also I was being very picky. Overall, the 520s is the best of all the 520's. Mainly because it has 160m and I think it's a little better than the SE.
I wouldn't be surprised if they also had japanese models also, that could run low power. The 530's, 830's both the later versions with digi readout etc. I still have a ts-830s and a vfo-230 here. I consider it the king of the old kenwood hybrids. Mainly because of the receiver goodies. I sold off the 520 I had when I picked up the 830. MK

It was a joke, Jeff. There isn't a meter, and my message wasn't a flame.
And I certainly wasn't seeking "credibility" with nonsense such as this.

As for the fake meter, it isn't an on/off meter (on for troll, off for no
troll). It is a meter that rates a troll on a scale from one to ten. Since
this troll was so obvious, it simply doesn't rate very high as a troll in my
```

opinion.

However, since you control your own fake meter, you're free to rate the troll how you want. And I assure you that I will not hold your troll rating against you. [insert big grin here]

Well, all I can say is maybe they didn't understand your question (how, I don't know), but on page 30 of the manual, under memory scan, is a box with an illustration of the radio that says "Setting non-scan channels". It tells you to push "F" than "SKIP" and points out the buttons to push. Below that it says "The decimal point disappears for skip channels and they are not scanned." It's a good radio overall, and I recommend it if you have a chance to pick one up. In fact, I like mine so much I just bought a second one (used) for use as a base station. You ought to email Alinco and tell them they lost a sale because their rep didn't know his equipment, see what they have to say.

Mark
K5MAR

BTW, If you do decide to get one, the 610 has 4 VFOs, 2 on each side. I put the NWS freq. (162.400 in my area) in one of the VFOs on the UHF side. That way I can keep the VHF side free for whatever I need (I'm a Skywarn spotter and ARES member), and still get the weather broadcasts with a couple of button pushes on the UHF side, and it's easily muted at any time.

In my understanding, even when connected to an external source the radio still operates from its LiIon battery. I successfully applied an external voltage (think it was 6.4V with a current limit of ?400mA? [have all data at home]) because I couldn't use the provided 110V wall wart in a 230V country. Can even remember a posting of a guy who warned from connecting the unit to a 6V car battery (no current limit) which would almost certainly lead to damage. All this applies to my VX-1R, but assume the VX-5R is not too different in this respect.

3479. Yaesu FT-901DM restoration (V)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-12 09:43:34 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3AAC9A46.2C4F9A1@ctv.es>
Source record: 63255

Good morning, my friends (you should be friend of mine to keep reading these articles ;-)),

Well, some more progress has been made on the 901. Not too much, as I had some medical troubles in my family which kept me far from radios all the weekend except for the friday night.

Summing up, pending troubles were in the CARRIER unit, FILTER unit, FM unit (I think I did not say anything about this before, but FM is really low on receive and unknown condition on transmit) and DRIVER/ FINAL unit.

I checked again my FILTER unit to find it worked with a bit less amplification than the other FILTER unit I have (from the good 901), but definitely worked. So I put it back to the rig.

But CARRIER unit was definitely bad: signal ouptput was just composed of a faint, unmodulated carrier. After lots of measuring here and there (with the unit removed from the rig, as I don't have extender cards), I found the culprit to be a tiny diode... which is used to 'eat' the backward polarity pulse the relay coil generates when power to it is cut. It was shorted, so the relay which selects RX or TX signal path on the CARRIER unit was always on RX... I wonder how the TX12V line supported that shortcircuit on TX. But it did. And, thinking a bit on this, probably the dead RL-1 RELAY on the main chassis, which among other things selects RX12V or TX12V, could have failed due to that short which, surely, was hard to the contact.

So, once the relay was working fine (BTW, I put a replacement relay I had on hand, as I plan to do with all the relays in the rig), CARRIER unit began to work flawlesly. Good!!!

And this was the end of my work on the 901 for this weekend. Hope to have some time left this week to work on it.

Now I am thinking about the trouble with the transmitter; at first glance, it seems that all the bands are missaligned, as I get maximum signal from driver tube when the preselector is far from the maximum RX level, which is close to the PRESELECTOR control markings. So it seems there is a trouble which affects all bands... I don't think it can be fixed just retuning caps in the driver stage. Some component(s) should be bad. I have already checked replacement 12BY7A and 6146B tubes, but got same results. Another check I made was disconnecting plate wire from the DRIVER to the FINAL unit, but this made no difference. So DRIVER unit is sure faulty. Now I _just_ need to locate where is the fault... hints welcomed!

See you on 6th part ;-)

Best regards,

JOSE

> place for guy wires)

Similar situation here! Don't buy a commercial vertical, make one yourself:
Bought a 30ft telescope fiberglass mast from http://www.qsl.net/dk9sq/ .
It's like a big fishing rod and withstands very strong winds because it's
light and flexible. Put a simple installation wire inside, run another wire
as counterpoise (ground) around the roof and place an automatic antenna
tuner directly at the base of the vertical. Am using an SG-230 from
http://www.sgcworld.com/ . The tuner isn't cheap, but the antenna is. After
8 years or so I had to replace the fiberglass mast which suffered from the
urban pollution and UV exposure. Tunes fine on all bands from 160m thru 10m.
Very good for DX due to flat radiation, not so good for short-range QSOs on
40m/80m for the same reason.

Thanks for the suggestion Markus.. I might look into that one. I can get Schedule 40 PVC cheaply here, and from a VHF antenna installation that I did, it seems to hold up well to high winds.. perhaps I can use something like that. Anyone have any plans for say, a home made version of a 4BTV??? I'm only going to run 220W PEP max into it... maybe I can make something in a vertical with traps????

Two questions:
1. what's the best way to feed ladder line into the shack (i.e. practical physical feed through window/walls etc.) ?

and

2. where is a good source for 450 ohm ladder line?

Right now, I've got a 160 m dipole strung in the back yard fed with rg8, have done ok, but have long thought about
going to ladder line.

>of course.

It should work OK though you'll probably have to realign the transceiver, most crystal-controlled sets aren't designed to cover a 20MHz band. (after you realign it, it will no longer work properly at 161.45MHz. If you're wanting to use the radio both in amateur and commercial service you're probably going to have to get a different radio.)

I do presume:

1. You have an amateur radio license. (without which you are not allowed to transmit in the 144MHz band. I don't know how likely you are to get in trouble for that in Singapore but in the USA there are serious fines.)

2. You don't actually plan to operate on exactly 144.0MHz.

3492. Re: Icom Mic to Alinco.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-12 18:12:55 UTC
From: KA9CAR <nospam@nospam.usa>
Message-ID: <98j3hvqil1@news.tribune.com>
Source record: 63269

Most ICOM radios have +9v on the audio line and their mic's use this for the electret element.
My ALINCO radios , like the Icom and Kenwood, have 5 v power on (pin 5) of the mic. SOME alinco have Data on pin 6 Some have Receive audio.

The pin out for ALINCO is on the web site under "downloadable manuals".

In My Alinco DX-77T, Jumper JMP-1 next to the audio gain pot, provides 8 vdc to the audio pin, similar to Icom. This is on the schematic, and described in the service manual but is NOT in the owners manual.

I use Electret Mic's on My DX-77T now.

3493. Re: Is the G5RV still one of the best all banders?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-12 18:28:38 UTC
From: Michael Edelman <mje@spamcop.net>
Message-ID: <3AAD1556.BFBBC3AC@spamcop.net>
Source record: 63270

The G5RV never was a great performing antenna, but then, that wasn't why it was designed. In the days before solid state rigs and the ubiquitous external tuner it was a designed as an antenna that any tube rig with tuned finals could load up. The impedance is within the range of the plate circuit of the typical tube transmitter or transceiver.

If you're looking for a good compromise antenna for 160-10, it's not bad, but it's never going to be great. Wire is cheap enough; why not just put up a series of dipoles cut for each band you're interested in? For 80, and to a lesser extent 40,, a large horizontal loop or a vertical is a good low-cost antenna, particularly as it's very difficult to get an 80M dipole high enough to get a decent radiation pattern unless you've got a very tall tower.

Hmm, Well have you used one??? I have worked well over 100 countries with
only 100 watts and we used many in the Canadian Army great success.

Maybe you just don't know how to install it?

> I wouldn't be surprised if they also had japanese models also, that
> could run low power.

I have a Trio TS-520D, which is thought to be a Japanese home market rig. I bought it used and abused but it seems to work fairly well but the switches are kind of noisy, even after cleaning (The previous owner had it on a boat for 15 years). The manual was written in Japanese but when a tech. went through it, he did not notice any major differences in it.

The manual noted a method for removing one final tube so it would fit under the old Novice 75 watt output requirement.

I like the 520 just fine. The Icom 746 I purchased awhile ago certainly is better but I've had a lot of fun with my 520. I'm kind of holding on to it so I can sell it at a bargin price to someone who is getting started on HF and needs a rig to see how he likes it.

Source record: 63273

Yes! It's still up as a backup antenna, I've run comparisons between it
and a G5RV, a Butternut vertical mounted on my chain link fence and several
other dipoles and the B&W always was a couple of S-units less in both
received and transmitted signal strength.
As for not knowing how to install it, I followed the directions to a T
and even tried several different configurations recommended by B&W, no
difference.
I'm sure you can work people with it, however, that is not the
determining factor whether or not an antenna is real efficient.
I remember storys about WW2 spies using bedsprings for an antenna, they
got out and were heard, but I hardly think it was a decent antenna! HAHA!
One other thing to think about, the antenna has a "matching transformer"
at one end, I think that's what B&W calls it. In reality, it's nothing but a
resistor to make the antenna look like its a 50 ohm load. On the lower
bands, 160-40, most of your power does little else than generate heat in
this thing and doesn't radiate at all. You may as well be a qrp station on
these bands.
I've met other people who have used it and generated many dx qso's, but
I believe you are far better off with seperate resonant antennas, using an
antenna tuner only when needed to flatten out the swr at the edges of the
band. That way more of your power is being radiated rather than heating up
the coax and tuner.

3499. Connector probs and IC-706MKIIG vs FT-100D

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-12 22:56:42 UTC
From: storkus@packard-hell.storkus.com
Message-ID: <98jk79$1c8$1@nnrp.atgi.net>
Source record: 63275
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

Ok, the connector question first since it's the most important: I have the new IC-T81A quad-band HT from Icom. Unfortunately, they chose to stick an SMA connector on the radio instead of, say, a TNC (which is what I would have chosen, but YMMV). I've found a couple of sources so far for SMA males (including the very expensive, but also very helpful Pasternack Enterprises), but I'm having some mechanical problems. A local radio shop here has some SMAs for RG-58-style cable that they were using for a local cab company that had a computer system that could receive GPS. These connectors are crimp-style. Unfortunately--despite the fact that they swear up and down that they're using the right size for the ferrule--the connector wobbles inside the ferrule and cable, eventually losing contact (i.e., becomes intermittent) on the shield as it flexes.
Now the tech at Pasternack said to me today when I called that the connector should be rock-hard when crimped properly--no wobbling of the ferrule and cable whatsoever! And everyone's told me that clamps will break clean off when flexed repeatedly. And while the Pasternack guy had no real opinion of the solder-type connectors (looking at them, though, I'm not sure how much of a difference the solder would make mechanically, anyway), the local radio shop says that they had poor results with them.
My original idea was to use an SMA to TNC or N adapter and then put the latter connector on the cables--this becomes more important when a base setup is used, where I intend to use LMR-400 (RG-8 size and performs a LOT better than 9913 both mechanically and electrically for only a fraction more) or LMR-600 (even bigger and lower loss) and SMAs are no longer possible.
So I'm sure, in these 3 groups, there has to be a few microwave people reading or maybe some guys who work in a commercial radio shop and need to do GPS or 800 MHz land-mobile or maybe even cellular (including 1800 or 1900 MHz PCS). Remember, this needs to work at 23cm (1300 MHz) reliably!

The second question is one that seems to pop up more and more, but the answers keep changing, so I'll ask again: I'm thinking, sometime in the future (maybe this summer) of getting an HF rig. An all-mode that works up to 70 cm would be real nice: that brings in the IC-706MKIIG and the FT-100D (and maybe the 847?). Reading around, this is what I've found:

Icom IC-706 MKIIG

Advantages: microphone and headphone jacks on the faceplate
mechanically built well
electrically built well as far as the basics go
the plethora of mods
computer-controllable

Disadvantages: lack of filters
DSP sucks (better in the G model?)
poor performance with strong signals (poor IMD rejection)

Yaesu FT-100D

Advantages: Filters rock!
DSP rocks too!
Easier to use (?)

Disadvantages: sucks mechanically (knobs fall off and feel "mushy", pigtails for leads)
Loud fans that STILL don't seem to do the job!
Lots of stories out there of blown finals and drifting osc's.
Yaesu customer (dis)service

This last part in particular worries me. I've bought quite a bit of Icom stuff (in fact, I may have to send in the quad-bander for a little battery pack problem) before, and I've NEVER had a problem with their customer service regarding parts or returns. The stories I've seen floating around about people sending in FT-100's THAT ARE STILL UNDER WARRANTY and having to pay or otherwise getting lots of static really worry me, especially considering how I hear a LOT about the radio falling apart (sometimes literally!). It doesn't do any good to have "the better radio" when it doesn't work! Despite all the faults in Icom's radio design (something I've noticed on my T81A as well, piss-poor AM rejection being up near the top) at least they work, and work reliably.
Now maybe these problems have been fixed with the new "D" version. But what about Yaesu's customer service if I need to send it in for some reason anyway?
And finally, Kenwood's new TS-2k has just come out, and has a $600 module to add 23cm capability to boot--the first to do so! (Well, since Icom discontinued their IC-900 line, anyway...) Any comments on that radio? It's pricey ($3k including the 23 cm module), and I've been hearing for quite a while now (outside the 'net!) about Kenwood's growing un-reliability, but I'm curious to find out what you all think.

Thanks for any and all info, and you can e-mail me direct at storkus@storkus.com. Thanks!

Mike

Do you want to convert it to 144 from 161? Is it a single channel unit?
If so, you could change the crystal and you would have to retune the
tuned circuits for 144. Shouldn't be a problem if you're comfortable
doing this. And...this is assuming there is enough range on the
variable coils or capacitors in the tuned circuits.

You may find "trimming" the antenna the wrong thing to do since you are lowering the frequency. You will need to extend it. Lower Freq.=longer wavelength=longer antenna.

Thanks for answer.
I have read notes at http://www.mods.dk first, but I don't find any other solutions except key sequence SQL+Multi+PWR.

I have one more problem with my new T81. I've notice that supplied wall charger BC110A doesn't charge completely the BP200 battery pack, when the TRX is turned off. In manual is written: "To charge the battery pack 13-16V DC is necessary", while DC from BC110A is 12V (13,1V idle - measured). Can I use supplied! 12V wall charger to charge battery pack? ;-)
Sorry for my "English"

I've always had good luck with running them along with the existing vehicle harness. There's usually a molded plug that fits in a hole in the firewall. The harness goes through a hole in the center of the plug. I've always had enough room to punch a second hole through the plug for my wires. Use a bit of coax seal around the wires to keep out the water.

Look on the firewall for the rubber boots where other wiring goes through to the inside. Find where that lines up on the inside floorboard then poke a small hole in the boot being careful not to hurt the existing wires. You can use a 1 foot piece of coat hanger as a puller by taping the new power cable to the end and poking the hanger through from the inside-out. This makes it easier to do alone.
Hope that was what you wanted.

I once tried a LL-fed dipole, with the LL coming all the way into the shack. Tuned it with a big Nye Viking ATU.

It tuned great, but one day I started looking into just why I was getting so much RFI pickup from the computer and monitor in the shack and discovered that most of it was being picked up by the LL and the ATU. When I ran a top-quality Coax all the way to the rig, the RFI noise level dropped DRAMATICALLY.

I don't use LL in the shack anymore. Don't use that big ATU either. I have lots of LL outside, but connect it to Coax long before it comes into the shack. I can still hear the RFI on a quiet band, but it is tolerable now.

My VHF Mobile Transceiver uses a 161.45 MHz crystal. Would I damage the set if I changed this into a 144 Mhz to match my other hand-held tranceiver in frequency? Assuming I trim the antenna length to 144MHz, of course.

Thanks

Recently my fuel gauge on the car has been sticking.
I think that there is some moisture in the pivot or spring that is freezing
and producing this effect.
Do you know of a way of freeing it without removing the dashboard?

>DC is necessary", while DC from BC110A is 12V (13,1V idle - measured). Can I
>use supplied! 12V wall charger to charge battery pack? ;-)
>Sorry for my "English"
>73, BPawel

The former question first: in response to pressure primarily to the FCC (the U.S. radio regulating agency) to keep receiver capable of receiving cellular transmissions off the market, Icom changed the firmware in newer T81A's (and, presumably, the T81E's as well) to remove the RX opening sequence from working. You'll know this because every segment of the LCD will light up when you do the sequence on such a disabled radio. See http://egroups.com/group/T81 for more info as well as the mods pages given above.
As for the latter question, I don't think it's your wall charger. Remember, the highest-voltage battery pack available for the T8 and T81 is 9.6 volts, well below 12 volts--any voltage regulator that can't work with a voltage drop of 2 volts is clearly crap! But, then again, seeing as Icom appears to have skimped on other essential areas of this radio (it seems to be very sensitive to AM interference even on FM modes, for instance), I wouldn't quite put it past them.
However, instead I'd be looking at the battery pack itself. I've noticed since the day I bought the radio that the battery pack won't charge unless I fiddle with its position inside the radio (after it's snapped in). In the above mention mailing list group, there's an article about how someone had similar problems with his BP-200, popped it open, and found that the radio connectors on the battery pack were made with ribbon cable (!) and that one lead had fallen off. I suspect that my and your problems may be from a similar or identical cause. Either today or tomorrow I intend to visit a ham store and buy 1 or 2 Maha BP-200 packs along with a rapid charger: if those charge fine on the radio without trouble, then I'm sure the pack is bad, and will call Icom to confirm they just want it sent back and not the radio too (I have only a month left on my warranty--yes, I've been lazy!).

Don't all of you find it just a bit strange that all the best technology is found now on cell phones and it still isn't making it on to the radios--even the rice boxes??? And I'm not just talking about Li-Ion here...

Mike

It might not hurt the radio, but you will probably get VERY low
output...you are trying to transmit on a frequency about 10% lower than
where it is tuned up. Receive sensitivity would probably suck as well.
The other problem is if the use a bandpass filter tuned to the 161 area,
you may not get nuch signal in to and out of the unit. As hams, that's
the beauty of it...we're allowed to try stuff like that :)

It depends a lot on the vehicle. I have found where the main wiring harness runs through the firewall, poked a hole in the rubber grommet, and went through that way. Sometimes, I will just get me a good landmark from the engine side of the firewall where I know nothing is on the other side and drill it and install a rubber grommet. Also, in some model vehicles, there are rubber plugs in the floorboard on the passenger side under the carpet or matting. Also, a lot of your vehicles have cable chases under the carpet or floor matting that make it convenient to run cables to the back of the vehicle.

Mike,

Probably the easiest route to take on your connection problem, would be to pick up a SMA male to BNC female adaptor and put it on the rig. Use a BNC patch cable from there to the main antenna coax, long enough to avoid strain on the rig connection when the rig is moved - maybe 2". BNCs work fine at 1296 and are more available. I'd stay away from TNCs. They are hard to come by, are generally more expensive and quality is highly variable. Large coax (RG8, etc.) directly connected to the HT is NOT a good idea! Too much strain would be introduced to the rig's SMA and it could break. The patch cable would allow you to change antennas easily, too. It's unlikely that one antenna is going to cover the four bands, anyway.

On HF rigs: I have an early "706" which works well but it's not great on the receiver end. It's handy for mobiling, though. I also have a FT 847 which I recommend highly for both base and mobile use. Three local hams have the FT 100. Two of the rigs have been great, the other has been back twice. You pays your money and takes your choice!

Looking for Raytheon, Apelco, and Webster CB radio equipment
for my personal collection. I need the following models (but
I will consider any others as well):

Raytheon:
Tube-type: Raycom, Raycom II
Solid-state: Raycom III, Raycom IV, Ray-Tel TWR-9, Ray-Tel TWR-11
Hand-held: Ray-Tel TWR-8, MW-2, Regal Ray-ette, Super Ray-ette

Apelco:
Tube-type: AR-9, AR-10

Webster Bandspanner:
Tube-type: 411 (labeled "Four-Eleven"), 412
Solid-state: 550

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

I've found the best way is to look for the rubber grommet that the speedometer cable goes through
and use it for the wires. A good second choice is where the AM/FM radio antenna coax goes through.

I have a number of extra pieces of Amateur Radio equipment I am selling.

Icom IC-2AT (the one with the keypad!) Includes antenna, DC adapter pack, and a BP-3 battery pack. The radio is in very good condition and would make an excellent unit for an APRS setup, mobile/portable packet, Fox transmitter, or a backup 2M rig.

Picture of unit: http://www.eskimo.com/~ghopper/IC2AT.jpg

I would like $75 for the unit but would consider reasonable offers.

email me at ghopper@eskimo.com

I am also selling: an IC-02AT, condition questionable, IC-03AT, 2M 35watt amp, Bird Watt meters and elements, Clamp on AC ammmeter, B&K high voltage probe, and a number of other items.

More likely it's the "sending unit" located in the tank.
Overfilling-"topping off"- the tank excessively can cause this.
Sometimes it has to be replaced to correct the problem.

Dick

That doesn't say anything about the relative efficiency of the antenna.
During the last sunspot maximum I managed to work a few states one
evening on 10M before I realized my tuner was set to "Dummy Load"!

The B&W was designed for frequency agility, not efficiency. At least
half the transmitted or received signal turns into heat in that big
terminating resistor. Keeps the SWR below 2:1 but doesn't have other
particular advantages. Useful in the heat of battle, but most hams have
the time to spin the knobs on a tuner.

Actually its a 6-channel unit with 5 empty xtal sockets. I just want
to insert a 144.xxx xtal into one of the empty sockets and use it at
that freq occasionally. I don't plan to re-tune any of the circuits.
I presume then there will be a loss of range, but thats OK. Perhaps I
can limit that loss by tuning the antenna. I just don't want to damage
the set.

I don't plan to realign the circuit. There are actually 5 empty
crystal sockets on the PCB (the front panel selects any of 6 freqs). I
would leave the original 161 MHz xtal in the first socket and insert a
144.xxx MHz xtal in one of the spare sockets. All I want is to
ocassionally operate the set at 144.xxx so I can talk to my handheld.
Reasonable loss of range is OK, I just don't want to damage the
circuit in any way.

Thanks for the advice.

If you have a 40ch sideband CB radio made by Tram, Cobra, Browning, Uniden, President, etc. I would be interested in purchasing it. Working condition is not important as long as it is cosmetically good. Get rid of that dust collector that you are never going to use. Payment by money order, no complicated nonsense here. Let me know what you have. Thanks. Email Wasupdare@aol.com

I have a number of extra pieces of Amateur Radio equipment I am selling.

Icom IC-02AT. The radio is in questionable condition and would make an
excellent parts unit, though it might be repairable. The unit does power
on and the reciever makes noise. The display shows 0.00

Picture of unit: http://www.eskimo.com/~ghopper/IC02AT.jpg

I would like $45 for the unit but would consider reasonable offers.

email me at ghopper@eskimo.com

I am also selling: an IC-2AT, condition very good, IC-03AT, 2M 35watt
amp, Bird Watt meters and elements, Clamp on AC ammmeter, B&K high
voltage probe, 2M amp, a blasting machine, B&W CCD video camera and a
number of other items.

I am the proud owner of one of the real classic rigs of the golden years of CB. I bought the Sams Book (CB 62) for the rig with the intention of repairing it. It seemed like an easy fix, since the PA functioned normally, and the receive and transmit were dead. Wrong! I have found a couple of errors in the Sams book, and very little to go on for troubleshooting. All the voltages shown are present. The synthesizer has 50 mv. peak to peak out, according to the book, the radio should be working, but there isn't even transistor white noise at the speaker terminals. The 455 IF

is okay, by injecting 455 khz is the only way to get the meter to move. There is enough output to hear the transmitter in all modes on the service monitor, but very weak, unhook the coax and it is gone. It is like the whole receiver and transmitter are biased off, but the 8.11 volts receive is present everywhere I look. This rig is unmodified, not even the paint seals are broken! If anyone has any ideas, sure would appreciate a hint! I would like to put this unit on ten meters, but I have to get it working at all first!

THanks,
Fred

3544. FS: Bird 43 wattmeters and elements

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-13 22:10:49 UTC
From: Grant Hopper <ghopper@eskimo.com>
Message-ID: <ghopper-D9668E.14104913032001@eskinews.eskimo.com>
Source record: 63220
Cross-posted to:
rec.radio.swap,rec.ham-radio.swap,rec.radio.amateur.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

Jim,

Meter #1 is a Bird 43 with UHF connectors. The unit is in very good to excellent condition. Comes with the shorting plug. No case, no elements.
Pictures:
http:/www.eskimo.com/~ghopper/birdf1.jpg Front
http:/www.eskimo.com/~ghopper/birdtop.jpg Top
http:/www.eskimo.com/~ghopper/birdstrap.jpg Strap
http:/www.eskimo.com/~ghopper/birdback.jpg Back
http:/www.eskimo.com/~ghopper/birdlt.jpg Left
http:/www.eskimo.com/~ghopper/birdrt.jpg Right
http:/www.eskimo.com/~ghopper/birdbot.jpg bottom

The jpgs are large and show a lot of detail because I had someone who was very interested in the condition (apparently a collector) and had offered $180 but within the hour had emailed back that he had decided on another unit. Go figure. I would like $170 for this unit but will consider reasonable offers once the unit has been posted for sale for a while.

Meter #2 is a Bird 43 with N connectors (male/female). The unit is in fair to good condition. Comes with the shorting plug. No case, no elements.
Pictures:
http:/www.eskimo.com/~ghopper/nbirdf.jpg Front
http:/www.eskimo.com/~ghopper/nbirdt.jpg Top
http:/www.eskimo.com/~ghopper/nbirdb.jpg Back
http:/www.eskimo.com/~ghopper/nbirdl.jpg Left
http:/www.eskimo.com/~ghopper/nbirdr.jpg Right

This unit has a 'Motorolla' label however, it is identical to 'Bird' bird meters with the exception of two extra screws holding the back on. The unit has some wear but looks good and works fine. I would like $160 for this unit but will consider reasonable offers once the unit has been posted for sale for a while.

I have two elements that I am immediately putting up for sale. Several others have already been sold, pending the receipt of funds. I may elect to sell others depending on how fast this stuff sells and/or the size of offers I get for the other elements.

The two are a 10D (200-500 Mhz, 10 watts) for $40, and a 100C (100-125 Mhz, 100 watt) for $60.
Picture:

http:/www.eskimo.com/~ghopper/elements.jpg

I also have a 250B, 500D, 25E, 100E, and 250E that are surplus to my needs and I may sell if I get a sufficient offer.

All items are plus shipping. All items are guaranteed against DOA, and are otherwise sold as-is. Payment by cashier's check or money order

Thanks for considering these items.

Grant Hopper
KB7WSD
ghopper@eskimo.com

I am also selling: an IC-2AT, condition very good, IC-02AT condition questionable, IC-03AT condition very good, 2M 35watt amp, B&K high voltage probe, 2M amp, a blasting machine, B&W CCD video camera, Kenwood SP-230 speaker, an Icom BC-35 battery charger, old video camera power supplies ($5 ea) which I have used as power supplies for other projects (built-in), and a number of other items.

3545. Vintage VHF/UHF equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-13 22:32:14 UTC
From: "Phil T. (VA3UX)" <phil@vaxxine.com>
Message-ID: <3AAE9FEE.3C668AD7@vaxxine.com>
Source record: 63221

have two pieces of what I would call "vintage" commercial radio
equipment.

One is a GE Transmitter/Receiver combination; all vacuum tube, power
amp
uses a 5894. Currently set-up for 168.99 Mhz. This is the original
cabinet which is about 3 feet tall, 2 feet wide and about 10" deep
(kinda
of like a big cereal box). The receiver and transmitter are on separate

chassis and can be removed from the cabinet. each has its own integral
power supply. Weighs 60 - 75 lbs (estimate)

The second is a Motorola repeater set-up for 412.0125 Mhz
transmit/417.0125
Mhz receive. This appears to be vintage solid state. Weight is around
80
lbs+ (estimate). Cabinet is similar size and shape to the GE unit
above.
Model number is XC34MSY-3IQ1CT.

These were both working when taken out of service last year. I bought
'em
but I really doubt I'll get around to using them (too many other
projects
on the go).

Any interested parties out there, please make reasonable offers. I'm
not a
VHF/UHF guy, so if these are just plain junk, feel free to tell me so.
There's a good pile of parts in these that I can use for something else.

Please reply direct to : phil@vaxxine.com

Thanks

Phil

3549. Re: Power cable trick

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-13 22:56:05 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3AAEA584.1E8D@bellsouth.net>
Source record: 63225

Jim,

Most vehicles *do* have pass-thru's in the firewall. But, like you,
I ran into this when I installed my 706 in my '93 Lumina. This car
has a larger than normal (3.4 DOHC) engine. While I don't doubt that
there are ways to get thru the firewall, it was a real pain to find one.
I don't bend as well as I once did, and the contortions required under
the dash were somewhat more that I wanted to attempt. Besides, I can't
focus these blasted bifocals up under there because of the space; if
I wanted to see something small, I couldn't tilt my head enough to see
it, and I was too close without the darned bificals! LOL!

Here's another method I used if the others' suggestions don't work out.
I discovered that there was room to chase the power cables along the in-
side of the fender, down into the cavity just in front of the driver's
door. The kick panel on the inside of the car, near the emergency brake
handle, has a "lip" that curls around the front door jamb. By running
the cable underneath this lip, being careful to clear the door hinges,
I was able to bring the power into the car, over the inside top of the
kick panel, over the lower dash cover, to the rig. By running the
cables under the lip and the rubber door seal, I prevented any chance of
"pinching" the cables when the door is shut. Works pretty well.

Two meter repeaters are not representative of most hams - especially in any
major city. Try working some two meter SSB, or better yet, spend some time
on HF. You will find a completely different type of operator.

Nope. Ham Radio is not dying. Just getting weeded out. When all the dust settles and people like "Kooky Child 8 Just Being Obnoxious" has his license to JAM taken away by the FCC, and his shrink finally puts him away, if does not drink himself to death first, then Ham Radio and air waves will be a much better place.

I'm trying to track the source of a rapid clicking noise on 80m in my 2000 Ford Windstar. I have an Icom 706/2g

By pulling fuses, I've narrowed it down to what's on fuse #10 - ABS, cruise, instrument panel & powertrain control module. I have ABS & cruise. Unplugging the cruise didn't fix the problem. I need to find out where the ABS computer is.

In other words, I didn't get far!

I wish there was such a thing as "shielded power cables" as I suspect my problem lies there.

Source record: 63237

Greetings!

I would like to trade my nice Icom IC-W31 dual band (2m/440) handheld for a Motorola field programmable VHF HT. Will consider any 'commercial' (maybe even another amateur) transceiver that does the PL tone of 229.1 -- That PL is an 'oddball' tone, and most amateur transceivers do not have it. There are some exceptions. I would really prefer a GP-68 in good shape with accessories. My Icom W-31 comes with 3 batteries (2 BP-173 batteries, 9.6V @ 650 mAh, and 1 BP-171, 4.8V @ 700 mAh), speaker mike (clip is broken, easily repairable), leather case, and charger. I know some of the Alinco HT's do 229.1 PL, but not all of 'em. The W-31 has cross-band repeat capability, dual receive, etc. Nice rig. Please e-mail with offers!

Sure you will, W6DKN. Have you been to 3.860 MHz lately? The two-meter operators are not any better or worse than any other ham. I take that back, at least the two-meter operators don't usually go around promoting bigotry towards their fellow hams.

So, if you know where the jerks are, why waste your time there? At least they occupy a small, known piece of the band so the trash is easy to avoid - unless you're the type that likes this stuff. (Yes, I have heard about the crap on 3.860, but I have no desire to waste my time with it)

Personally I prefer to work DX and do very little stateside work (which seems to be where most of the problem operators are on HF). I work 12, 17, 20, and 40 almost every day and I have never had anything but great QSO's. I do work VHF/UHF also, but I only do SSB or FM simplex and SATS. There are very few "garbage operators" in these modes.

At least on HF, the jerks stay in a small, relatively consistent spot and it is fairly common knowledge where they are, so they are very easy to avoid. Very different than the VHF repeaters in the big cities, where the jerks get their kicks from going from machine to machine to see what trouble they can cause (just like 11 meters).

> Thanks.

It will work, but the output could be pretty hot unless you turn it down real low. Also, the audio is not the greatest on those, but should be usable if you run it real low. Those mikes can be pretty good when used on old tube rigs that need alot of mike drive. But the 746 doesn't need too much. I usually don't buy the expensive mikes. My present desk mike is made from the base of a turner plus three, but I took the original head/element off and replaced with a unidirectional dynamic. I only use the turner parts as the push to talk button. If that turner mike ends up sounding lousy, you could change the element to something else. An eletret condensor will do ok on those. You can get those real cheap at radio shack. The stock hand mikes, and I think even the SM-20 use eletret elements. The only drawback to those is a fairly flat freq response. You can sound kind of bassy, and somewhat mushy on some people. Depends on the element and the housing etc. Thats why I prefer the dynamic which has more of a voice peak in the freq range. Also seems a tad smoother to me. MK

That thought had not eluded me, however the gauge remains pegged when the
ignition is switched off and thus power is removed from the instrumentation.

Thank you for you response.

Like you, I've heard about it, but have never listened.

> [snip] Very different than the VHF
> repeaters in the big cities, where the
> jerks get their kicks from going from
> machine to machine to see what
> trouble they can cause (just like 11
> meters)

The point is that the 2-meter versus HF operator nonsense you mentioned earlier has absolutely nothing to do with it - the "jerks" are the same on both (the only difference between 2-meters and HF is the limited number of repeaters on 2-meters - harder to avoid the "jerks" if you stay mainly on the repeaters).

Therefore, you should not have said earlier that the "two meter repeaters are not representative of most hams" (you said "hams" here) and that he should "spend some time on HF" because he "will find a completely different type of operator." That is not true. There are no more "jerks" on 2 meters than on HF - they're only a little more difficult to avoid because of the limited number of repeaters.

If the "jerks" really disturb you, then I agree with your suggestion - simply avoid the repeaters. Its far easier to avoid them on the SSB frequencies (just like on HF).

Take care, W6DKN.

Lets take a survey of the number of jerks and lids out of 1000 QSO's on the
2 meter repeaters in Los Angeles, and do the same with 1000 HF QSO's on 17
meters. If you are correct, the ratios should be about the same...

> Therefore, you should not have said earlier that the "two meter
repeaters

It has certainly been my experience over the last several years in/around the Los Angeles area of So CA. Maybe in your area things are different. But, like most people, we base our opinions on our personal experiences.

And let's not forget that my original response was to a post stating that from listening to 2 meters, the poster concluded that ham radio in general was just like 11 meters.

> If the "jerks" really disturb you, then I agree with your suggestion -
> simply avoid the repeaters. Its far easier to avoid them on the SSB

They don't disturb me - in fact they have no effect on me one way or the other - because I choose not to pay any attention to them.

Donaghadee Festival (Sponsor)

Wyzcom have been asked to set-up a 24cm ATV link between Donaghadee and Portpatrick lighthouses on the 16 & 17th of March. Our technical director, Tony was allocated the callsign of GB0DDF for the Donaghadee (Northern Ireland) festival. The Portpatrick event has been allocated GB0PPE.

The link will be open to all the schools and residents in both areas, some five thousand people are expected so ATV will get the largest advertising is has received in many years. Blue Peter, Sky news, and local TV stations have said they will visit the event (Other events permitting).

We are planning tests on the 10th of March so are open to any other stations wishing to test with us. This will be the first time the two lighthouses have been opened to the public and both towns are investing heavily in advertising the event.

For further information please contact Tony (GI0UZG) at tony@wyzcom.com or (UK) 07788 563526. Tony was also asked to set-up an Amateur Radio station(s) using the same callsign. The RSGB had granted him use of all bands for this event so it will be one to watch out for. As Tony is a member of GEARS (Glengormley Electronics Amateur Radio Society) he has asked them to help set up the event, but due to the size we are undermanned, so the more the merrier. We have a large lorry to work from and are keen to hear from anyone that wants to help. ALL ARE WELCOME.

The Donaghadee Festival Company have kindly given control of this part of the event over to Tony, please forward all response to him!

3575. Eagle Spitfire 454 Clarifier mod ?

Hello
I'm looking for a modification for my Eagle Spitfire 454 10m SSB HT
for the clarifier in RX AND TX mode. I found something for a AH-100
Cherokee but this is not helpful because i have no schematic and
layout diagram from the radio and the parts are marked different or
marked not at all.
Thank you for any help.

Mark,

Thanks for the information. I think you have convinced me that
I need to do more research on mics, freq response, etc. before I
go spending money on another one. I probably will bag the idea
of using the Turner and use the stock mic for now until I understand
more of what I need. Thanks for the suggestions. I appreciate it.

The Icom's put +8v DC up the mic cable, I believe...

Check www.heilsound.com & click on the Newsletter link. If you really want decent sound, put the stock mic back in the box & get a Heil. I'm using the HMM-ic on my '706; works great. Sounds much better than the stock mic. Wider freq. response.

I have for sale a Standard C5718 2/440 mobile radio. It contains the upgraded memory module to give you 200 channels total. Includes the power cord and instruction manual. This radio has been modified and has the latest updates from Matt Adrian who is an authorized repair center for Standard radio. Standard radios are one of the best built amateur radios and unfortunately are no longer sold here in the states.
Asking $350

YUP - that's what happens when you try to run ham equipment wiring close to existing auto wiring - it's just BEGGING for maximum interference between the two! If you think the noise problem FROM the auto wiring TO your ham gear - at the LOW power levels involved - just IMAGINE the degree of serious RFI you are feeding INTO your cars various sensitive systems! Ever have an airbag go off in your face while transmitting on HF? It can ruin your whole day...

For those daring souls absolutely DARING major catastrophy by crowding relatively high levels of RF-bearing cables immediately next to auto wiring, *I* would suggest that at LEAST you add as much RF shielding as possible to the transmitter lines running next to existing auto wiring. YES, even 12 volt lines supplying your rig MAY WELL be also carrying substantial RFI looking for a "victim"...

Make YOUR OWN damn shielded cable!

All you need do is remove an appropriate length of shielding from
either RG8 or smaller coax - depending on your particilar need - and
install it over your rigs supply lead - for even BETTER shielding,
carefully wrap the lead with aluminum foil before installing the coax
shield. Be sure to carefully tape or shrink-tube the home-made
shielded cable to avoid shorting out other circuits under the dash.
THEN ground ONE end of that cable (to avoid RF loops), preferrably at
the passenger compartment side. Sorry to sound critical, but JEEZE,
this matter of shielding power cables is HARDLY rocket science...

3589. Re: Kenwood TS 2000 info needed

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-14 18:44:51 UTC
From: Kerry Whittle <kk7jo@arrl.net>
Message-ID: <3AAFBC23.3060407@arrl.net>
Source record: 63165

Renee,

I was talking to the owner of the local amateur radio store about the TS-2000 and in particular about the receive. He told me that it was the same as the new TS-570 as far as the HF transceiver goes. The rest of the radio is just features and additions.

So, if you go by what Woody says, the TS-2000 is as good a contest rig as a TS-570. Now before I went by this information completely I would compare the specs between the TS-2000 and the TS-570XX. I would also compare the specs for the TS-2000 and the rigs that are agreed to be "contester rigs."

There's the best info that I can give you. And remember as always, caveat emptor.

73 es gud luk,

Kerry de kk7jo

Aside from brute force approximation of the manual method, does anyone know
of a proven algorithm for an auto-tune antenna tuner? Assume "tune" & "load"
caps and a roller inductor.

Brenda,
The individual who has been using foul language and character
assasination on this group is doing the same and far worse on another
ham radio news group. I would very much like to see his postings banned
from this and the other newsgroups. Who can I write to on this matter?
Is the moderator of this group available thru email?

One more thing. Recently I had the honor and pleasure of listening
to K4ZDH here in Youngstown at a local MVARA meeting. The subject of
this kind of verbal harrassment and poor manners/operating practices
was central to his theme that evening. We as a group can do more to get
rid of this type of so-called operator. Hollingsworth's message was on
this same line, that is, what we can do as a group to rid ourselves of
the verbal bullies and intimidators.

Thanks and 73s,

Fred Sole

Probably both. There's a sensor at each wheel & the system can't work if the four are acting without some kind of central controller.

Hi,

I have for sale a Yeasu FT747 GX. This unit is in perfect working condition
and puts out a full 100 watts 80-10.

I personally bought and installed the Optional FM Unit.

This rig comes with original manual and schematics. Not sure about the box.

You can own this rig for $550.00 and I will ship. (Stateside Only)

Yep, thats one of them. I had a hunch there would be. The US 520 also
let you remove one tube for novice. I think alot of hams in JA are
limited to 10w output. Or used to be anyway. MK

Can anyone tell me the Korean (equivelant) coax designations for the western RG-8U, RG-8X, RG-213, etc. They don't have those designations here, and I would like to know what to ask for when I go to buy coax. Just being able to write down (x) meters of (x) type coax saves a lot of trying to explain what I want through the language barrier... :) TIA to anyone that can help. :)

3600. Re: Auto-Tune Algorithm

Hi, Ron -

Autotune systems include a mismatch detector and control circuit. The detector can be a simple VSWR bridge going to a microprocessor which seeks a minimum (standard zero finding algorithms apply). Fancier systems have phase and magnitude detectors which drive the two servo'ed capacitors via the appropriate gain.

The latter approach is used widely in the plasma etching field - where 13.56MHz power is sent to a reactive plasma chamber via a tuning network. Here, the impedance of the load depends on the energy going to the plasma, which depends on the quality of the match. A design which always and quickly finds a stable tuning point is much valued. These designs also don't use pi networks, but L networks since the load is always a low (2 to 25 ohms) and capacitive impedance.

Best of luck with your designs!

Jim Horn, WB9SYN/6

Could it possibly be the dampening circuit for the fuel and temp gages. Some times they are dampened to make them not react quickly to changes. You said the fuse went to the instrument panel. Ed/N3WJA

[Looks like my NNTP server is screwed up, so this is a repost. Sorry if you see this twice. Please cc: to my e-mail, since I'm not sure how well my news will be functioning. I miss DejaNews... 73, KE1KD]

"HEY! An Icom IC-730 for only $100! Hmmm. Does that have 30 meters? How about a general-coverage receiver? It's all solid state, right?"

If you're like me, you've seen amateur radio equipment listed for sale and wondered exactly what it is. If you're lucky, the manufacturer is still in business and has specs for the rig on their web site. Often, though, you're not that lucky. (For the record, the IC-730 was an 80-10M, solid state rig that showed up just before the WARC bands. It would work 30, 17, and 12 meters with a simple "cut one wire" mod, and it didn't have a GC receiver.)

I would like to create a web database of specifications of used (and new, I suppose) amateur radio equipment. I have a bunch of spec sheets and old radio magazines as sources of information, and I'd like to solicit as much info as possible from the internet amateur radio community.

Before I create the database, though, I'd like input on what specs you'd like to see included. Here are my initial thoughts:

1. Manufacturer (Kenwood, Yaesu, Icom, Drake, Ten-Tec, Collins, etc.)

2. Model (TS-520S, IC-751A, FT-936R, AL-80B, etc.)

3. Class (for now just: transmitter, receiver, transceiver, amplifier)

4. Type (base, mobile, handheld)

5. Bands (1.8, 3.5, 7.0, 10.0, 14.0, 18.0, 21.0, 24.5, 28.0, 50.0, 144.0, 220.0, 420.0, 902.0, 1230.0, etc. or some such.)

6. Design (tube, solid-state, both)

7. Modes (AM, FM, USB, LSB, CW, FSK, etc.)

8. Power Requirement (13.8VDC/20A, 110VAC/3A, 220VAC/10A, battery pack, etc.)

9. Output Power (100W, 1.5W, etc.)

10. Dimensions (Height, Width, Depth, Weight)

11. Extended/General Coverage RX (yes, no, option, mod)

12. Keyer (yes, no, option)

13. DSP (yes, no, option)

14. QSK (yes, no, option)

15. VOX (yes, no, option)

16. Computer controllable (yes, no, option)

17. Frequency Display (digital, analog, or N/A [for amps])

18. Accessories (filters, power supplies, batteries, etc.)

19. Notes (stuff that doesn't fit anywhere else.)

I know this is probably missing lots of things that are important to you, so I need you to tell me what you'd like to see included. I'm not going to include a full spec-sheet (IMD, spectral purity, etc.) or review of the rigs, I just want to get enough info to help you figure out whether you might be interested in the rig and you'd like to contact the seller for more info. I'd like to keep the data to hard facts from the manufacturers datasheets, owners manuals, or printed advertisements, and probably leave out the anecdotal info like "blows filter caps if loaded improperly." That's partially to keep from starting flame wars, and partially to keep from getting sued.

So, what say you? Is this something you'd like to see? What specs would you like included? Are you willing to type in the specs from your owners manual?

73 de KE1KD,
Scott Babb

I don't think so. I unplugged the instrument panel today & the noise was still present.

I haven't unplugged the ABS computer because I can't find it. Right now it is looking like the prime source.

I thought the powertrain control module would be the source, but it isn't.

If I connect another battery to the radio, I still get the noise.

If the antenna is disconnected, the noise goes away.

Congratulations, Monte.

Look at a Yaesu FT-50. They have been around for about 5 years and the price has fallen accordingly. The same basic radio is sold as a different version as a commercial 2 way radio to police/fire departments. When I was in Ankara Turkey 2 years ago, all the traffic police had them.

I have had one for 4 years and it works great.

Monte,
First, CONGRATULATIONS!! Welcome to amateur radio!

Now, on to your HT. My personal favorite is the ADI AT-600, which retails for around $299 (price may vary). This is a very easy to use HT, my first one was used, no manual, and I was easily able to set most functions anyway, a very intuitive design. The only drawback is the stock Ni-Cad battery, which doesn't last very long. ADI also sells a "gift pack" for $99 (if it's a "gift", why did I have to buy it?) which contains the NiMH battery, a drop-in fast charger/conditioner, and a 12 VDC auto power cord, as well as a low-power Ni-Cad battery. The NiMH battery and drop-in charger alone are over $140 if bought separately, so the package is a good deal. The radios can be found used for $200 or less. The 600 has extended receive, alpha tags, and separate volume and squelch controls for each band, just to name a few of it's features. It's a little larger and heavier than some of the other radios, but can take abuse I'd hate to subject the smaller, lighter rigs to.

Good luck and 73,
Mark
K5MAR

ARRL members, Here is a letter that you can use and send to your ARRL section manager, Division director, and ARRL board of Director:

Dear (insert directors name here),

Why don't you wake up and pull your fucking head out of your ass? I am concerned about the quality of amateur radio operators, not quantity. If I wanted to listen to a bunch of stupid operators, I would listen to CB. Do us all a favor and propose something that will impove amateur radio, not dumb it down. Bring integrity and intelligence back into the amateur radio service. Thanks and 73.

(insert your name here)

Now that we have sound cards and PCs connected to our radios, when will
the autotune routines go after our receivers for optimizations? That
could be pretty cool!

> mad every time I listen to 2 meters [snip]

Then don't listen to 2 meters. Is there some reason you cannot turn the dial to another band? Are you disabled? Did you forget to read the owner's manual? If 2 meters is that bad, then go elsewhere. That shouldn't be too difficult for an intellegent person like you to figure out.

You know, I simply don't understand this animosity towards the newer hams. And that is exactly what this is (animosity towards the newer hams) because I rarely see such complaints about the many troublemakers on HF. It's not like the newer hams are taking anything away from the older hams (older as hams, not age). Before the no-code techs came, the 2-meter band was completely dead. There probably weren't 25 people in the entire country using that band on a regular basis, and the number of VHF ham repeaters could likely be counted on one hand.

However, now that the no-code techs are actually using the band, and have put all those repeaters up, the older hams sit around all day complaining. Its not like the older hams have lost anything - they still have all their HF frequencies. And absolutely nobody is forcing any of these people to listen to the 2-meter frequencies. So I just don't understand what all the griping is about.

Perhaps there is some strange twisted logic at work here. Can you explain it to me, Dana? If you don't like the 2-meter band, and nobody is forcing you to listen to it, then why do you sit around listening to it (like you claimed you did above). More importantly, why do you sit around complaining about it when the situation is so easily solved (don't listen)?

3620. IC751 FAN MOTOR Resistors

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-15 13:01:38 UTC
From: Vince <wa.tworsx@verizon.net>
Message-ID: <3AB0BD3D.3CA40BA3@verizon.net>
Source record: 63081

Hello Group:

I am new to this group, and on behalf of a friend who is having some trouble with his IC751, I seek information about the value of the resistors associated with the fan motor.

My friend, WB3BUT, tells me that his fan motor was not running. He opened up the IC751 rig and found what appears to be a resistor mounted in a small clamp to a ckt board that is burnt open. There is a second resistor nearby. He thinks that the burnt resistor is associated with the SLOW speed for the fan motor. He has placed a short across the burnt out resistor terminal points.

I suspect that this is asking for a lot more expensive trouble.

Can anyone tell me what the value and wattage rating for these two resistors is ?

Please reply to WA.TWORSX@VERIZON.NET

Thanks es 73s,
de ~ Vince ~

3621. Yaesu FT-901DM restoration (VI)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-15 13:21:29 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3AB0C1D9.4B642CC0@ctv.es>
Source record: 63087

Good morning,

As I promissed in last installment, here you have the latest news about my works on the FT-901DM. Last time I told you about the trouble I had with the transmitter section. Something was not going fine, as I could not get the circuits to tune where they should at any band. I suspected of something common to all bands, not just an alignment matter. Somebody suggested that perhaps the transmit frequency was not right... I had checked with the scope previously, but I had not really measured it in detail. So I put the oscilloscope at the input of the 12BY7A DRIVER tube to find that the signal was really a mixture of different frequencies... suspicious!. Checking the transmit chain I found that the signal got that way in the RF module. And, yes, there were a couple of 3SK40 dual gate FETs in that module which were suspect. I checked with a good RF unit to find it worked fine. Using that unit, I aligned the set and got good results at 10 (A,B,C,D), 40 and 80 meters. But at 15 and 20 meters I got low power output. Anyway, with the good RF unit I got good DRIVER tube input in all bands, so I decided to look at that unit to fix it.

So I asked for 3SK40/3SK51 transistors in several e-mail lists and newsgroups. I got few feedback so I decided to try a replacement on my own. In my transistor box I had some 40673 transistors, which looked similar electrically and physically, so I gave them a try. But I got only a very low signal output from RF module with them. Looking at the technical manual I found the reason: those transistors (Q106 and Q107) are the only ones in all the rig which should be 3SK40. Some other 3SK40 can be changed, with small circuit mods, to 3SK51 or another 3SK40 flavour. But not the ones which were bad!. No panic... there is always a way. I looked for other 3SK40 in the set and found one, Q901 in the FM unit (that unit is not working fine and, anyway, is not too useful for me at the moment and can be removed without disturbing the rig operation at all) and also another one, Q101 in the RF unit which could be replaced by a 3SK51... so perhaps by a 40673?. I tried to change one at a time and replacing only Q107 I got a nice output. Ok, except it vanished just when you maximized it with the PRESELECTOR (!). So I had an idea: got the Q101 from same unit and swapped it with Q106. Q101 is in the receive path. And this worked!. Now I got good and stable output on transmit and also good signals on receive. So I left it that way until I locate some spare 3SK40 (any around, please?)

Now I need to look again to the 15 and 20 meters trouble, but as I have been able to get about 90W at 28-30 MHz, I am confident I can get them working and the finals are not shot.

I checked also the MEMORY module to find it does not work... I am pretty sure last time I checked it worked fine. So another thing to look at!

All in all, the rig is now lots better than it was when I started with it, so I am happy. All I need is some more hours... and it will be finished (let's hope ;-) !)

Regards,

JOSE

Source record: 63071

Hi Monte,
Like you, I decided to buy a dual band HT right after I got my license. I went to a hamfest and bought a new Yaesu FT-50 RD and over the next few months, bought an extra battery, magnet mount antenna for the car, a whip antenna for extended range, a 12 volt cigarette lighter cord and other accessories that brought my investment to well over $400. I wish I'd never bought it in the first place. It has a tremendous number of features that I never use, which primarily serve to make it "user unfriendly." Carrying around $350 in my hand, I am constantly aware of the risk of dropping or losing it. And finally, I have only heard anyone on 440 twice in all the 2 years I've had it.
I much prefer to use my back up... a Radio Shack HTX 202 single bander 2 meter that I bought for $70. It is more rugged, is much easie to operate (for example to increase power, just press a button instead of going into a whole menu driven process.) and the investment is low enought that I don't worry about it all the time. If you don't like to program your microwave oven and the VCR every time the power interrupts, you won't like the FT-50 or most of the other "fancy" HT's now on the market.
You can pick up a good used 202 any day of the week for about $70 - $75 so start there and if you later decide you want more bells & whistles, you are better prepared to make a choice of what to buy next. (My guess is that you'll invest the other $350 into a high frequency rig when you get your General license.)

They are losing, or lost, the PR battle that every no code Tech has a
burning desire to get on H.F. A surprising number of Tech class operators
don't care for H.F. much. I would dare say that some of the new Hams don't
even consider access to H.F. as the "crown jewel" of Ham Radio any more.

> - they still have all their HF frequencies.

And some like to go out of their way to tweak the noses of no code Techs
about too.

the
> griping is about.

With more things to do on V/UHF the lure of H.F. has declined a bit. As you
pointed out, in the past with little use of the V/UHF bands, a Tech class
had few choices for stations to work. That's now no longer true.

> Perhaps there is some strange twisted logic at work here.

Yup. The Tech class people are having fun, and some of the OTers are really
bugged about it.

When I worked at Intel, a group of us would camp out together. We would
meet at a preset place on a Saturday morning, decide where to camp out,
and head out at a preset time. Somebody was always late and out of range
of CB radios. I talked the entire group into getting their Tech licenses.

We then used a mountain-top repeater to keep in touch with the late
comers and direct them to the camp site. It worked out well but only
a few of the campers saw any use for HF. After all, they had given
up their CB radios and gone to the trouble to obtain Tech licenses
because HF couldn't perform the required function.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

>suggestions? As importantly, what should I stay away from?

If you actually want to talk on it, stay away from the dinky handytalkies that measure their power in milliwatts -- that is, less than one watt of output power. Get something that has an output power of, say, 5 to 7 watts. It will be a much more useful radio, because you will be able to hit a lot more repeaters.

If you live in a big city with a lot of repeaters, the more memories your HT has, the better.

Be sure to go to the ARRL site -- http://www.arrl.org -- and get the latest ARRL Repeater Directory. It only costs $8, and it lists the frequency and characteristics of every repeater in every city in America, and it's broken down city by city.

Just about any handytalkie made by Icom, Yaesu or Kenwood will do you good.

Welcome to the hobby!

Source record: 63073

I agree that the HTX's are nice units, but the FT50 has dropped in price, (I paid $260 for mine a year ans a half ago, and it's dropped some since then. I made my own power cord, and spent 17 dollars on a replacement duck.

What are the unfriendly features? My only misgiving is that there isn't any broadband ability, but that only interferes with me listening to FM broadcast. Otherwise I love it! If your unit loses it's memory every time you remove the battery, (re your note about having to reprogram every time you lose power) you might need a repair.

> Now that we have sound cards and PCs connected to our radios, when will
> the autotune routines go after our receivers for optimizations? That
> could be pretty cool!

Different definition of 'tuning', John. The earlier discussion is about finding a adjustable matching network's setting which results in the best match for an unknown load. Tuning a receiver is actually an altogether different process.

If you are receiving AM, the carrier can be recovered via any of a variety of synchronous reception techniques and tuning with as much precision as you want is simple. Phase locked loops work well too.

For CW, a raft of methods are available too. In either case, ignoring spurious signals is the trick, not tuning once the desired signal is identified.

For SSB, automatic tuning is more challenging. With ACSB (amplitude compandored sideband), a pilot carrier makes it easy. For general SSB, I'd lean toward speech compressing algorithms to extract the speech parameters and try to determine the tuning offset from there. Definitely DSP time - which, as you say, a soundcard and software could do. But isn't it a bit of overkill?

A stable receiver local oscillator and backlash free tuning makes manual tuning both easy and satisfying, at least for me. Especially for weak, fading, or partially buried signals. I suspect that automatic tuning will have a way to go to beat the human ear here.

At least that's my guess. More power to anyone working to prove me wrong!!

Anyone ever perform the extended range tx modification on the radio. I opened up my radio and followed the instructions according to those posted on the QRZ website and I am not sure where the diode is that they are talking about. Is it the surface mount component just below the (D16) label or is this diode supposed to be to the left of the label where the white brackets are? Incidentally if there is no component where the brackets are, it came that way!

Welcome to ham radio, Monte. A lot of people have been proposing the
Alincos and one a Yaesu, all dual banders, all except the guy with the used
one selling at $300.
But here's an idea: how about a QUAD-band HT--the Icom IC-T81A also retails
for $300. For a hundred more, when you buy from your favorite ham radio
store, buy another battery pack (Maha makes the same BP-200 that comes with
your radio, but at $30 less) and a charger ($60 for the Maha). It's not
the greatest radio in the world, but if you have any 6m and 23cm activity
in your area, it's perfect for getting onto those bands and you can't beat
the price! There's some concern about learning the controls (contrary to
Icom's literature, you *WILL* need to RTFM...again and again, in my
experience (and I'm excellent with technical things), but you'll be hard-
pressed to find an HT that does so much for so little money.
Now I like to use my HT's as mobile rigs, with has its advantages (don't
have to buy another radio!) and disadvantages (lack of selectivity and,
therefore, sensitivity to IMD, as well as being kind of difficult to mess
with while driving--best to pull off if programming or whatever, although
just changing channels programmed into memory can be done without too much
trouble), and even as a base rig (the former disadvantage with
selectivity and IMD can apply even worse here, but it can still be better
than buying a new radio), so you may want to get an antenna, something that
no one has bothered to discuss. For base use, nothing beats a discone in
terms of price, although getting the scanner discones like you see at
Radio Shack to resonate at 6m is a bit difficult. Or, if you feel like it
and have a switch and the time and space, make 4 single band antennas, though
this is hard for me living in an apartment building. For mobile use,
unfortunately, choices are far more limited. One is a discone on your car--
doesn't look good and the wind resistance and difficulty of mounting would
certainly be a challenge! :) And rolling your own multi-band vertical would
be a royal pain since making high-Q traps at 70cm is difficult, and almost

impossible at 23cm, although most even dual-band mobile verticals aren't necessarily trapped (the higher bands are resonated as a mult-wavelength antenna). The final solution comes down to 2 choices: 4 single (or 2 multi) band antennas, passing through 1 or 2 duplexers to split out the bands, or a multi-band mobile antenna. The former solution, IMHO would work better (plus, you could insert filters in the 2m and maybe 70cm portions to get rid of the IMD), but is expensive--well over $200 by the time you get done! I chose, at this point, the latter solution, which leaves you with only one choice: Austin Antenna's "Pentenna", which is a single mobile antenna covering all 5 bands from 6m - 23cm. It's pricey--$89.95 retail--but seems to work extremely well on all but 6m, where it's a bit touchy. It's construction, however, doesn't look like no $90, so if you think you're going to be hitting trees or going through the carwash (and you're permanent-mounting), this isn't a possible choice. But as I'm on a mag-mount, I haven't had any real troubles yet. Hopefully this isn't too much to absorb at first, but I try to offer as much help as I can. Good luck!

That's breathtakingly incorrect. The no-code Tech license came to be in 1990. The 2-meter band has been home to thousands of repeaters and a huge amount of activity since the late 1960's. I'm sure plenty of no-code Techs have participated in establishing and maintaining repeaters during the last decade, and more power to them. But the amount of activity at VHF and above prior to that was tremendous, and to say that VHF repeaters exist because of no-code Techs is just a complete distortion of history.

Does anybody know the procedure for having an individual removed from the news groups if they are as caustic as this "gentleman"? This type of abuse and attacks are totally uncalled for. It is one thing for people to have a little fun with matching barbs but this individual and others are stretching the avenues of freedom of speech beyond civilized limits. How dare he be allowed to character assassinate with the ugliness of a devil. There must be a place to report him besides the "abuse" center.

And One does not expect to produce quality anything by sending such garbage to the FCC or the ARRL. W9FPJ

I have for sale a Standard C5718 2/440 mobile radio. It contains the upgraded memory module to give you 200 channels total. Includes the power cord and instruction manual. This radio has been modified and has the latest updates from Matt Adrian who is an authorized repair center for Standard radio. Standard radios are one of the best built amateur radios and unfortunately are no longer sold here in the states.
Asking $350 shipped.

It means he wants to improve the quality of amateurs that are available for emergencies. I'm not surprised that you failed to see that Cecil, but then you never were one that put much stock in quality.

Hello Dana:
My friend's IC751 might soon turn into scrap, if he is not able to determine
the correct value of the resistors associated with the internal fan motor.
One resistor has burned out and he has placed a short across the terminal
points.....
Can u provide me the resistance and wattage rating for the two resistors
used in the fan motor speed circuit?
Pse post or reply to wa.tworsx@verizon.net.

So Vince, during an emergency, are you and your family going to refuse
to be saved by an amateur radio operator who doesn't measure up to your
standards for quality? As far as emergency amateur radio operators go,
seems to me that halitosis is better than no breath at all.

Hey folks, has anybody mounted a whip antenna anywhere on a Honda
CRV? I just got a CRV and have a 10 meter whip I had on my pickup I'd
like to put on the CRV. I really need to know how/where you managed to
run the antenna cable into the vehicle. Are there any predrilled
access holes under or any place on the vehicle.
thanks,
Jim K4NAV

KJ6Q Gary, made an excellent point about RF interference getting into your control systems. I've heard horror stories that occur when keying the mike! Some include: Door locks repeatedly lock/unlock, engine dies, cruise control goes to full throttle, all 4 wheel brakes apply fully and a whole lot of less incredible things.

Beware of letting RF into your existing wiring. Thanks, Gary, for bringing this up.
JJ

On most (every) vechical, the accessories connection on the ignition
can be used to pull a normally closed realy that is in-line between
the battery and the radio. Be sure the relay is rated of 20-25 amps.

I've done this on a number of vechicles with a problem. In those that
did not have the relay there was the odd lost memories, reset etc.
problems.

I recently purchase an IC-706 which works great except for FM. When I key up radio in either HF or 2M FM --radio powers up for a second and then drops to zero. I talked to AES tech and he said the FM oscillator may need readjusted. Can anybody help me to locate the adjustment for this. I don't have a service manual. Any help or suggestions would be appreciated. I would take a service manual if anyone has one for sale. This is the straight IC-706. AES service is backed up six weeks.

Brenda:
There are two ways you can approach this. One is to take a foot or so of RG-8, with a few inches of the end stripped so the construction can be seen to the store.

Alternatively, you can do what I did last time in Japan, find a catalog with pictures and dimensions, and ferret out the designation from that. Koreans may even use the same metric sizes as Japan, but I have no idea where I left the catalog.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-16 22:46:12 UTC
From: "Robert J. Perlstein" <perls@ime.net>
Message-ID: <98u537qnk1@murdoch.harvard.net>
Source record: 63194

Howdy all!

I'm looking for a few good parts for my HP 8640 signal generator.
All common parts used on many of HP's test gear.

Six each "foot" assemblies. HP Part # 5060-0867
Black rectangular hard plastic with center spring loaded button. Clips on to
bottom panel of generator.

Tilt stand wire. HP Part # 1490-0030
Chrome plated wire attaches to two front feet swivels "down" and supports
generator at angle.

Side panel frame assembly. HP Part # 08640-20075
Cast aluminum frame panel, with integral handle. Forms side of HP8640
generator housing.

Anyone can help?

Thanks!

1.) I purchased two plug-in type carbon monoxide detectors today. One was placed in the laundry room next to my radio shack and the other in the upstairs master bedroom. (The former had a digital readout and the latter did not.) Both tested okay IAW the company instructions.

2.) A short time later I decided to work a little CW on ten meters. As I called CQ, the Mrs. shouted that the upstairs detector was going off. A few tests verified that my transmissions, with and without my amplifier on, was causing the detector to activate. I did notice that if I had my beam in a certain direction, the transmissions did not bother the detector. I moved the detector to a different part of the room and made some checks with the beam in various directors with no further problems, at least on 10 meters.

3.) The instruction booklet had no "caution" statements concerning RF. However, a company representative did state that that was an over-sight. A recent data sheet that she read to me did indicate that cell phones and amateur radio equipment may activate the detectors, but would not harm them.

4.) Why didn't the unit downstairs and closer to the station go off? Couple of possibilities. (1) It was a more expensive model and may be more rf proof. (2) The upstairs unit was closer to the beam and the RF output source.

Just a heads-up.

This is simply not true. If the screwdriver mast is braced (and it
should be braced) a two foot rigid section puts very little additional
stress on the antenna. Take a look at my mobile installation at:

On the main unit just to the right of the filters is a surface mount trimmer
cap labeled C267, that's it. Spec is 3.0v at CP4, 29.1 mhz FM in TX mode.
Give it a few spins to clean it, NO CONTACT CLEANER OR ANYTHING ELSE.

Sure you can ,you may want to also make mention that the dues went up too !
You see now that all the people that did 5 wpm who are Generals are higher
are now supporting the
ARRL,because they think the ARRL is sooooooo great,but the sorry part of the
matter is they are going to pay for something the ARRL had no say in.
When it comes down to it the FCC has the Final say always the government!

Always make sure that life safety devices are UL listed for their purpose. If I'm not mistaken, the unit should have been tested with some type of RF exposure to it, but manufacturers vary the dosages. More than likely, something structural was blocking the lower detector.

Source record: 63105

***Good point. The package does state "C (UL) US LISTED". But in small
print on the back it states: "This alarm has not been investigated by
UL for carbon monoxide detection below 70ppm" A reading/breathing in
of carbon monoxide of 400ppm is life threatening after 3 hours
according to the writeup. For 200ppm it says slight headache, fatigue,
dizziness, nausea after 2-3 hours but not life threatening. 50ppm is
the maximum allowable concentration for continuous exposure for
healthy adults in any 8 hour period, according to OSHA, so the
writeup states.

No, Leland, no one is "bugged" about that. Many of us have dedicated a
huge amount of our personal time to help make that happen, in case you
didn't know what a VE does.
What many are "bugged" about is the lowering of requirements,
especially for the highest class of license. Nothing more.

Bill,
Thanks for the info. I have taken steps at YSU to have this person
blocked. But I think a tactic that is far more effective is to totally
ignore this individual. He gets his jollies by ataganizing others. If
no one replies to his postings, he will lose his audience and go away.
Right now thats what keeps him coming back. He has commanded
attention. If he gets none, he is the big loser.

3719. HELP! ICOM 706 Mk2 G filter installation

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-17 04:36:26 UTC
From: "Stephen P. Johnson" <stephen.p.johnson@worldnet.att.net>
Message-ID: <eRBs6.2353$M%2.179372@bgtnsc05-news.ops.worldnet.att.net>
Source record: 63119

I received my new 706 Mk2 this evening. I installed FL-232, the 350 Hz
filter, in Optional
Filter slot #1 per the instructions. I used the "initial set mode" option
#9 to tell the radio
that FL-232 is installed. According to the manual, I should be able to
toggle between the wide
and narrow settings by pushing the M3 FIL button and the display should be
updated with
a "W" or "N".

When I do this nothing happens except the rig makes a beep.

What am I doing wrong?

Steve Johnson, N2FT

Gene "Buck" Rogers, K4ABT makes a PSK31 interface too, that's considerably cheaper than the Rig Blaster.

www.packetradio.com is his address.

Seems to me 27MHz lies within that range. Is 7MHz HF? Is 4MHz HF?
Is 29MHz HF?

It has everything to do with HF configurations not being able to
deliver the required performance. Along with CW, has HF also become
such a religion that nobody can admit that VHF/UHF repeaters have some
advantages over HF without repeaters?

You don't mention which mod you performed - was it a 'keystroke' mod
or did you need to physically modify the radio? I had an FT-470 that
was physically modified for MARS/CAP, but when the 'button battery'
went dead I had to do a keystroke sequence to reactivate the mod.

Suggest you check the following site as it has a wealth of mod info.

Source record: 63004

Make sure you have the filter in the first slot, this should be next to
the already installed filter. It does not mater which direction the
filter is installed in.

You seem to have gone to the menue and set it up for the correct
filter. Not sure if you can skip a filter slot or not, but you may try
setting up filter # 2 and see if you don't have it in the wrong slot
before opening up the cover.

Also be awear the filter will not function in the SSB mode but only in
the CW/RTTY mode. I installed one and had planned on using it in the
'sound card digital' mode and found it did not work in the ssb mode.
Also have not tried transmitting but found I could tell the 706 it had a
FL-223 in it and it would work in the ssb modes also, but the frequency
would shift.

3732. High power battery for FT-11/51R ???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-17 12:40:46 UTC
From: C-A Berseth <Claude-Albert.Berseth@epfl.ch>
Message-ID: <3AB35B4E.C7E3AC7E@epfl.ch>
Source record: 63006
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Hi all,

I need a high power battery pack for my Yaesu FT-51R. The original
FNB-38 (9.6V 600 mAh NiCd) is worn out. Anyway, the radio draws so much
current (1.7 A) at full power
with both channels on that the battery life is too short to be
practical.

-> Has anyone found a 9.6V battery with higher capacity ? This implies
NiMH, of course.

-> Otherwise I will buy 8 NiMH cells and make a battery with a FBA-14
battery case and
an extra 4-cells case.

Now to the real problem : what does the overcharge protection
circuit look like ? Has
anyone opened an FNB-38 pack ? There must be some resistors and/or
Zener diodes
to protect from overcharging when the original charger is used,
because this charger is
just a constant current source !

All suggestions / help are welcome !!!
Thanks in advance,

Claude-Albert

CERTIFIED MAIL–RETURN RECEIPT REQUESTED
Roger L. Wiseman
610 Glen Haven Avenue
Glendale, WV 26038-1302
Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:
The Commission has monitoring evidence that you have been deliberately and maliciously interfering with the radio operations of other licensed Amateurs on the 14 MHz Amateur band. This interference has occurred at various times in the last several months and includes broadcasting music and other unidentified transmissions.
The Commission generally relies upon the Amateur Radio Service to be self-policing. Operation of the type described above is contrary to the basis and purpose of Amateur Radio and degrades the service for legitimate users.
This serves as a Warning Notice that such operation will not be tolerated. Additional incidents of operation of the type described above will result in a monetary fine being levied against you and in revocation proceedings before an Administrative Law Judge.
You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel, Amateur Radio Service
Enforcement Bureau

The point is that VHF/UHF has some advantages over HF, Dick.
Mountain-top repeaters around the Valley of the Sun are one
of them. No HF frequency would do what we needed done unless
there were HF repeaters and there were not any. The only reason
most of those campers got their Tech licenses was to be able
to have reliable 2500 square mile full-time coverage. There's
no reason for those guys to want to get on HF, therefore no
reason for them to want to upgrade. A few of them who have
moved away from the Valley of the Sun have become interested
in HF.

Jim:

I have a 4-door rather than a CRV, but since no one else has responded yet, I'll tell you how I did it.

I made a license-plate mount out of a piece of sheet metal. You can also buy these made out of stainless steel (I forget the name of the company -- they've advertised in QST).

Just above the license plate where the two little lights are, there are openings that lead directly into the trunk. If you have a similar little ledge above the licence plate with lights in it, look there.

Thanks, Al. :-)
I had to install the international keyboard (in win 98) on mine when I started to study Spanish, and I just wrote in the alternate key symbols on the keycaps with a sanford sharpie, and then sprayed the keyboard with clear acrylic to protect the writing. It's a lot easier than typing alt-666 or something, and you have to remember that keyboards cost less than $20.

3743. TS-940SAT vs Paragon Compare?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-17 16:59:47 UTC
From: luecknik@world-net.net
Message-ID: <3ab393b1.8487050@news.world-net.net>
Source record: 63015

Would like opinions of the two. I have an excellent Paragon with mike,
manuals, and 500khz filter. I bought it recently, but never used it.
Paid $900
Another ham wants to trade a TS-940SAT, manual, no mike, for it.
I am over 40 years as a ham, and 70 as a being. Am on medication that
dulls the senses, so the senior moments prevail.
I still operate some CW, and a little SSB. Love to listen to QSOs.
I just don't know which way to go. I recieved a bad TS-930SAT in a
Joplin scam/swap. The holes are faulty, so it's of no use.
Any idea which rig would best suit me? I was dismayed by the eham
reviews of the Paragon. I need to decide right away. Thanks. James

Sounds more like the upstairs unit was closer to the RF feedpoint and
experiencing RF overload.

The RF could be entering the AC wiring, or it could be just overloading
the detector itself. You might try moving the CO detector to a
different upstairs location.

You may also try some sort of choke or ferrite core on the AC line going
into the detector.

Something else you may want to try. Put some kind of shielding in the
attic, between your antenna feedpoint and the CO detector. I don't
think it will need to be elaborate, perhaps, even some metal porch
screen material. You could experiment with the amount of area covered.

Andy

You'd better check the technical manual for the exact model you own before hand. You never mentioned the brand or model. For example, a Motorola Micor receiver made for the High VHF split (the 160 MHz region) will NOT reach the amateur band unless the helical frontend is replaced. For many other commercial radios you might also have to consider going from low-side to high side LO injection.

Also, most modern VHF transmitters use broadband matching in the predriver, driver and PA stages. Again, the parts are often picked at the factory for the intended VHF split the radio was intended to be used for. A government or railroad 160 MHz set often becomes extremely inefficient when operated in the 2-meter band for these reasons.

So yes, you run the risk of damaging the PA, and your radio may not reach the 2-meter band regardless. There is no quick or easy answer to your question based on the info you/ve provided.

Who said it was??? The point is that a bunch of my friends who once
were CBers are now Techs because HF did not meet their needs and
VHF did. And HF still doesn't meet their needs.

Download AGWPE V2000.78 and WinPack 6.51, there are comprehensive instructions within the software, and even a diagram of a how to make up a lead for Packet. The software is all fully functional and free.

Usually the same lead can service both radios if you fit enough plugs, unless you link to a DX Cluster to hunt the PSK31 on HF, then a second lead/computer is required or you may want to look at getting hold of a TNC, since both applications can't use the Sound Card at the same time. You'll need at least two serial ports anyway.

Check Deja news for past listings. I bought a spare here on rec.radio.swap from a ham in the midwest a couple of years ago. It seems the same tube is used in hospital patient monitors. The one in my R9000 was acting flaky, but I found it was just loose solder connection to a large bypass filter cap in the horizontal circuit. How much is an LCD TFT panel from ICOM?

3775. Kenwood TL-922 problems!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-18 06:55:33 UTC
From: "William F. Hagen" <whagen@inreach.com>
Message-ID: <3AB45BE5.DEFF1433@inreach.com>
Source record: 62950

Greetings all, I just aquired a tl-922 and when trying to tune it upp for the 160M band, I heard a bzzzzt when tuning cw at 100 watts. Now there is no dip, and no rf out. I think when tuning I exceeded the grid current, or possibly the plate current.
I then checked the setup on the 80 meter band, did a careful job, and adjusted the alc to keep the grid current below the 200mA. Everything fine, on cw at 100 watts, 600 watts out.
One final note, the meter shows no measureable idle current on plate, should be 100mA, and never did even on initial startup or when tuned and dipped on the 80 meter band. (weak tubes?)
I am wondering if I burned something on the bandswitch setup when tuning the 160 meter band.

The setup is the tl922, excited with a Kenwood ts50, and the at50 tuner. I am operating into a MFJ 2 kilowatt can dummy load hooked to the mfj versatuner 2.

I triple checked all the connections, everything seems cabled up ok. Any comments as to what might be wrong here, and if the rig needs new tubes or a trip to the Kenwood shop will be appreciated.
thanks,
William F. Hagen

3781. ADMS-1F or ARDTS-150 software for Vertex VX-150

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-18 12:54:12 UTC
From: Idontwantspam@net
Message-ID: <3ab4aea0.64261267@news.bellatlantic.net>
Source record: 62958

Recently got a VX-150, and found out that while I can use the same
programming cable as the FT-50, it needs a different set of software.

I think I could special order the new software only, but I'm wondering
if there is shareware out there for this? I wasn't thrilled with the
ADMS-1E software for the FT-50, and would rather not pay again for
another specialized bit of software that works no better.

Also, is there some software that would allow sharing info between the
FT-50 and VX-150?
Happy trails,
Gary

hI
check your output on 40 meters with 100 watts drive you should get aprox 8 to 900 watts out on cw flip to ssb should be 12 to 1400 out assuming the tubes are at full output.
a 922 that is working correctly with good tubes should do right at legal limit on 40 meters.
it could be that your band selector is bad on 160 meters
you can take the cover off, unplug it first and let it set a few minutes to drain off.
check the b/s switch for signs of burn spot on the 160 and 80 tap.
i had one that did the same thing as you are describing and it was the band switch.
i would not send it back to kenwood. way to costly.
i sent mine to bill edwards at omega electronics. did a great job installed all the updates and fixed my problem for a VERY REASONABLE PRICE
here is his link

Hello!

I'm not too sure if this is the correct forum for this, but here goes....

I bought a Datong 'Automatic RF Speech Processor' many moons ago.

After quite a while of sitting on the shelf as I had no radio gear set up, I decided to try it today.

It didn't work! Hence my email! Can I buy from you a workshop manual anywhere - anybody know? The unit seems to suffer from Rf getting into somewhere - and I suspect that it needs a re-alignment - but apart from the obvious output level pot on the rear panel, I've not got a clue which 'bits' to adjust.

Can anyone help at all please?

Thanks and Regards,

Phil Smeaton

One of the biggest problem with the ham radio population is hams!

I wanted to be a ham ever since I started playing around with walkie-talkies in 1973, but it took me several years and a move to a different state before I actually met a ham.

Also, the current community I live in has a restriction on antennas because, apparently, because a ham a number of years ago behaved rather badly, so the community banned all antennas over 10 ft. high. One can get waivers now, but . . . another black eye for ham radio in the mind of the general community. And if we use PRB-1 to fight their rule, the community assumes we are still a bunch of jerks. Definitely a lose-lose situation.

Somewhere along the way, we've basically lost our appeal to the younger generations. I'm 43, and am usually one of the younger hams at any gathering. I've personally tried, one-on-one to interest kids in hamming, but they want something internet-like. Voice only, or worse yet, CW, bores them to no end. Communicating with the far ends of the world to them is only a matter of picking up a phone and dialing the right numbers. I remember when communication with far points was a matter of skill and luck and equipment.

Unfortunately, I'm now part of the problem, myself. I'm a computer programmer who starts to work early and gets home late, and move a good bit. Involved in the community? Not very much. Most community involvement involves couples and families, and that leaves me out, anyway.

3800. Re: Drake B-Line

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-18 20:42:15 UTC
From: Steven L Umbach <n9rou@home.com>
Message-ID: <H49t6.117073$t67.1701542@news1.rdc1.il.home.com>
Source record: 62974

The Drake B line is an outstanding unit. I have the B line along with a R4C and a mint TR4CW. The R4B has about the best received audio I have ever heard on a rig. It is not as selective as C line though, which can be outfitted with optional crystal filters. The R4B has no slots for optional filters and comes with selectable bandwidths (.4, 1.2, 2.4, and 4.8 khz), built in noise blanker, passband tuning, and notch control. The receiver is very quiet and handles strong signals very well. Tubes are cheap at hamfests - I usually get them for about $2-$3 a piece except for the 6JB6 sweep tube finals in the T-4XB which can run $40 - $60 for a matched pair of Sylvanias. You want to be very careful about tuning the transmitter with ANY sweep tubes. They will last a long time if treated right though. A nice B line with a power supply will probably cost you at least $400 these days - price depends on condition. You can get a junky scratched up smoke covered set for a lot less. Even though the C line is a better performer I really like my B line. For one thing it is a lot more attractive than the C line in my opinion mostly due to the looks of the main tuning knob. I use mine mostly on 40 and 75 meters for ragchews. Good luck. --- Steve KK9ZZ

All it takes is one counter example to nullify that argument "no one", and
Richard has provided one.

Quoted from a Richard McCollum post in rec.radio.cb

"Pecking orders come in several flavors. I will make no bones here that I
do not consider a Codeless Tech to be a full-fledged member of the
fraternity and in fact I refused to administer them as a VE"

> What many are "bugged" about is the lowering of requirements,
> especially for the highest class of license. Nothing more.

That maybe true, but for some I think it goes deeper than that.

Go to: http://www.mods.dk/pictureselect.php3?radio=kenwood&model=tr-7800

it is very close to looks of the 7800. I have one. 14 channels and it has a tone board but you have to manualy set the tones. I'm in a bad intermod area and not a peep comes thru on this unit. It has a helical in the ant circ. No broadband coverage but a solid performer on 2 meters.

From: 2w8ji@akorn.net
Message-ID: <3ab549b0.306542474@news.accessunited.com>
Source record: 62985
Cross-posted to: rec.radio.amateur.swap,rec.radio.amateur.equipment

I'm looking for R4C's, non-working models OK as long as PTO is good.
Prefer 250 Hz and 500Hz optional filters.

Any S/N, even the ones with the MOSFET mixer, are OK since I gut the
mixers out anyway.

I have a 75S1 and a KWM-2, in pretty good shape, I'll trade for EQUAL
value Drake gear. And no..... I won't swap even up for a non-working
junk R4C.

Drop the 2 from my e-mail.

Message-ID: <6det6.1986$pP2.338401@paloalto-snr1.gtei.net>
Source record: 62991

I've had ALL the Drake twin line thru the years, and for a year or so, had the B line sitting directly above a fully loaded C line - both setups well aligned and operating perfectly. I found the B line to be every BIT as good a set in ALL aspects of operation, selectivity advantage of the C lines was QUITE marginal, and more than offset by the fact that the B line comes STOCK with various bandwidths, while you pay extra for those in the C line. There was NEVER a time on either CW or SSB that the C line provided copy I couldn't match with the B line! In a moment of insanity, I sold both setups, and since have bought another B line that isn't quite as well-kept overall as the other set, but does quite well, and cost me $350 for transmitter, receiver, all cables, the MS4 speaker and power supply and band crystals for 160, full 10 meter coverage and all the WARC bands. If I can find another B line that's noticeably cleaner (I'm fussier now!) for the same price, I'll buy it too!

OH, and yeah, I'd even stoop to buying a fully-equipped C line for that price too... 8^)

3817. Equipment for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-19 02:43:48 UTC
From: "Tim P." <commissioner@fcc.gov>
Message-ID: <Enet6.145433$Z8.29608469@typhoon.southeast.rr.com>
Source record: 62995

I have the following for sale:

Celwave UHF mobile duplexer 4 cavity
Decibel Products DB-4076 UHF Duplexers 3 cavity (will tune to 440MHz)
Decibel Products DB-4175a(?) UHF notch Cavities
GE Phoenix UHF 16 ch
GE Phoenix VHF 2 ch w/ AEA PK88 TNC programmed on 2mtr packet freqs
GE MVP UHF 4 ch already duplexed w/umbilical out of rear for controller- on 440MHz
GE S-825 control head for Delta/Rangr w/siren/light control package- no cables
GE Voter shelves w/5 RX modules functional
GE Delta VHF 40W 16ch mobile (radio only) on 149MHz from factory (N3661N402B)
GE UHF 4 port RX multicoupler (will tune to 440MHz)
Kenwood KMC-8 spkr mike (TK-300/310)
Kenwood KMC-8a spkr mike (TK-320/340/350/353/360/370/378)
Kenwood TK-240 DTMF VHF portable 12ch "self programmable" w/batt & ant
Kenwood TK-340 DTMF UHF portable 12ch "self programmable" w/batt & ant
Kenwood TK-310 DTMF UHF portable 16ch w/1600mAh batt and antenna
Maxon SP2550 16ch VHF Portables programmable- 1 pair w/ batts no ants
Maxon TPP480 PC Programming Interface for trunked & conventional models
S-Com 7K controller w/patch VG condition- with harness for Delta 16ch remote base operation
Standard GX-3000 25 w UHF mobile on 440MHz
Uniden AMX501 PC programming interface for trunked & conventional models
Uniden SMS815 800MHz LTR trunked mobile VG condition
Vectronics VC300-DLP Antenna Tuner w/cross needle watt/SWR meter built in balun w/manual
Yaesu NC29 quick charger (drop in)

Prices are negotiable- make offer.

3820. Re: Kenwood TL-922 problems!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-19 02:52:06 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <qvet6.2025$pP2.344937@paloalto-snr1.gtei.net>
Source record: 62994

You've undoubtedly arced across something in the 160 tank circuit, and now have a carbon path that prevents operation on that band - obviously you have output on other bands, so that largely rules out serious tube problems. Not familiar with the bias circuit in that amp, so not sure what's normal idling current in transmit with no drive, but my Amp Supply LK500 shows about 110 mills at idle/transmit. Sounds like you might also have a problem in your bias circuit...

>advantage of the C lines was QUITE marginal, and more than offset by the

That's because C lines have all sorts of problems.

The early ones have terrible second mixers and deliver FT-101-style
blocking performance.

They all have horrid AGC systems. The group delay through the filters
is several milliseconds and stages ahead of the filters are used with
AGC.

The BFO leaks back into the IF stages and distorts the audio, and also
causes the AGC to be modulated with the beat between the BFO and
signals.

Later C lines partially corrected the 2nd mixer problems, but the
other problems remain.

The R4B doesn't have many of these problems. The R4C has more
potential, however, if you "gut it" and rebuild it properly.

Source record: 62898

I have some Motorola GaasFet preselectors for 800MHz. These units have a VERY high quality GaasFet preamp board in them (high intercept point, low noise figure) with an integrated voltage regulator. These are suitable for VHF/UHF if the filters are removed or bypassed.

With some helicals these could be the basis for a great tower top preamp for repeater use. $75 ea

I owned a B-line for 25 years and enjoyed it immensely.
Sold it last year for $400.

The higher bands can get a little deaf if you don't replace
the tubes and keep it tuned up nicely.

It easily matches the TS-930 that I currently use.

I just got tired of waiting for the filaments to warm up,
and thought it would be better off it the hands of
a serious collector.

Yes it does. But on an individual basis, at least with me. What torques
my
tail is when one whines because he can't have it all on the strength of
his codefree tech written test, or yesterday's equivalent. It merely
indicated a lifelong whiner of the first magnitude, and I won't cut him
any substantial amound of slack. I have lots of tech friends who never
do that, or they would likely not be my friends.
But don't worry, not everyone is cut out to be a CW operator. Most who
aren't don't have a clue what they are missing and couldn't care less.

I think you have hit the nail on the head, Charlie.

The world has changed and the magic that once belonged to radio has lost its appeal to the majority of our population. There are still a few people that appreciate the "magic" of radio, but not many. The same is true of aviation, automobiles, etc. The novelty has worn off.

Couple society's loss of enthusiasm with the requirements for antenna space and the fact that our operations often prove to be a nuisance to others' electronic equipment and it's a miracle that we are permitted to operate at all.

What can be done to improve the situation? I don't think much can be done at all. Perhaps we would be wise to enjoy the time remaining for our hobby and make it a point not to be too cantankerous to those with other agendas. We amount to no more than a small bug in the grand scheme of things.

No, I don't feel I am being pessimistic. I love radio, or more precisely, communicating via EMR, but perhaps it is time to be pragmatic. Nothing lasts forever, not even life itself. Maybe that is why we should value it as much as we can while it's here. Instead of fighting over who is a "real" ham and who is a transplanted CB'er, we should appreciate all of the individuals that enjoy communicating via radio. We are a dying breed.

Truer words were never spoken. As a technical hobby, where skills in
electronics were obtained, the hobby is dying.

As to the "personal communication" aspects, even CB (with no license)
has greatly diminished use.

The problem is NOT morse code or testing, it is a social change. Radio
no longer has "magic" to 99% of the people who would have shown some
interest in prior decades. It is not a correctable problem, and
eventually the hobby will die as a technical hobby and training ground
for skilled communications people.

It'll happen, and there is nothing that can be done to change that.

3839. Simpson Model "A" 2m FM rig - any info?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-19 14:56:45 UTC
From: k5dh@raytheon.com
Message-ID: <N6pt6.45$qf5.1216@dfw-service2.ext.raytheon.com>
Source record: 62914

I acquired a Simpson Model "A" four channel 2m FM rig in a box lot at an auction. It definitely works, although there is an intermittent connection somewhere in the mic ass'y, which should be easy to find and repair. Anyone have an owner's manual for this rig? Any other information?

73,
Dean, K5DH

I have for auction a Standard C5718 2/440 mobile radio. It contains the upgraded memory module to give you 200 channels total. Includes the power cord and instruction manual. This radio has been modified and has the latest updates from Matt Adrian who is an authorized repair center for Standard radio. Standard radios are one of the best built amateur radios and unfortunately are no longer sold here in the states.

Currently only $250

Hello - - -

I own an ICOM 706 MK-II and was wondering if there are other folks
selling filters besides Icom for this unit.

I sometimes listen to AM stations in the SSB mode and would like to have
a wider bandpass than the standard 2.4kc. Icom offers a 2.8kc unit
which I may be forced into buying.

Any comments .... ?

John

Have to strongly agree with both of you. After I retired, I thought I would really get back into ham radio. Bought a house with a tower and beam. Even came with a Henry linear. Got set up on the digital modes, joined the local radio club, check into the weekly net, got my Extra Class, etc. But in reality, I find that I am forcing myself to "enjoy" my hobby of 50 years. Many of my ham friends are dead or out of the hobby. If it hadn't been for the personal computer coming on the scene in the 70's, maybe it would be different, but I find myself spending a great deal more time on the internet and computer related activities than I do on ham radio. Sad, but I just don't have the enthusiasm for it anymore. It opened lots of doors for me when I was young, but I think the door is about to close. What am I going to do with the 1,000 QSL cards I just got? :-)

WAVE GOODBYE, HAM RADIO IS ON ITS WAY OUT. WHEN I WAS FIRST LICENSED IN 1960 THERE WERE ANY NUMBER OF MAGAZINES BEING SUPPORTED BY HUNDREDS OF HAM BUSINESSES. NOW THERE IS A PROBLEM OF ENOUGH BUSINESES TO SUPPORT TWO, ONE OF THOSE SHOWS SIGNS OF HAVING PROBLEMS. THEN TOO THE FEATURED ARTICLES GENERALLY ARE COMPUTER RELATED.

I STILL HAVE HF EQUIPMENT BUT ONLY THE 2 METER GETS ANY USE, AND THAT NOT MUCH. I HAVE TAKEN UP THE COLLECTING AND REPAIRING OF WHAT IS REFERED TO AS "ANTIQUE" RADIO, THAT IS EARLY 1920'S BROADCAST RADIOS. THERE IS THE THRILL OF BUILDING POWER SUPPLIES, REWINDING TRANSFORMERS, GETTING THESE OLD ONES WORKING AGAIN, LISTENING TO BC DX AND ALL THE OTHER THINGS I DID AS A BOY AND TEENAGER. AS TIME PROGRESSED I HAVE STARTED SUPPLYING THE NEEDED PARTS TO OTHERS AND THAT HAS ALSO A FUN PART OF IT. IF ANY OF YOU ARE LOOKING FOR A GOOD SUBSTITITE, CHECK OUT rec.antiques.radio+phono OR ANY OTHER OF THE ASSORTED SITES AVAILABLE.

Perhaps these views are correct. Lets assume they are. That being the case...what can be done? Why sit there and bitch and moan and offer no solution?

How about a major change in what Amateur radio can do. You want to attract the youngsters???? Ever hear of the ISS, the international space station? Tell me how you can talk to it via the internet....WITHOUT RADIOS???. Thats one idea.

It isn't going to be too long down the line when we have outposts on MARS and the MOON. No wires there either.

You ever hear of public service? Traffic nets?? etc.

How about Ham radio that interfaces with the computers for some LAN stuff?

Just some thoughts. Change is good. Use it to our advantage.

Gee, I've been struggling with learning Morse Code for the past three months, working on going the whole way to Extra from my Tech license, and looking forward to it! But I'm a little concerned here. We have people who hate newcomers because they are Tech's, people who hate newcomers because they are only starting at 5wpm, and people who hate newcomers because they apparently didn't pass a tough enough test.

I think that is enough disdain to make a person wonder what they are getting into. Certainly not a welcome mat thrown out here! Imagine a person thinking about possibly becoming a ham. Say they come to this group and simply read the messages. Does this seem inviting? Not very. Some of the messages are filled with enough vitriol to send some of the more timid running to take up a more friendly pastime, like playing ice hockey.

Perhaps some of us need only to look to ourselves to see why there may be troubles within the amateur radio service.

Cecil, Dick is not complaining about Techs as a group nor am I. We are reaping the results of fundamental dishonesty. I will give you two points to look up in your Funk & Wagnalls.

Point 1. The Tech is not and never was designed to be the entry-level license for HF amateur radio. It predates the codeless arguments so we can dispense with them. It was designed to serve a multiplicity of uses, all worthy but none of them in the mainstream of Amateur Radio. Some of them included:
a. Real honest experimenters - all 12 of them.
b. Wives wanting contact with the old man. The Bread-and-Milk thing which was the subject of a lot of dubious subterfuges of which I was once a major instigator. Every wife on our repeater was named Sally and had the same callsign, a 2x3 I once had for 2 months or so.
c. Personal communication of the type you describe with your camping buddies. The FCC whatever else one may think of them has a habit of encouraging communication. Good way to keep tabs on number one son when he is armed and dangerous on a hunting trip.
d. Taking some pressure out of CB. The spots were up then, too.

Without beating the point to death, selling the Tech as an entry-level ticket was and is fundamentally dishonest. In my VE days I did not administer them because I did not believe I was doing anyone a favor. As a practical matter I would not be called upon to anyway because of the necessity to keep the Advanced VEs occupied. In the context where Leland butted in, the discussion was advising the newbie. Guess what? I don't recommend taking Element 2 as an initial step either.

Point 2. This dishonesty, as lies have a habit of doing, has come back to haunt us -- certainly in the general environs of Newington CT. The Tech since it came into existence has been a dead end for a lot of amateur careers. When you get on phone, the time for code practice or working it

never comes again. Larry was in the trap, so was I. So if nothing else our level of tolerance is not as great as some but we know every self-deception in the book. As Billy Sunday once said of Satan, "I know there is a Devil because the Bible tells me so and because I have done business with the bastard personally". I won't lead a man there any more than I would lead him to an open door to unlit basement steps.

At least prior to 1991 the Tech, at least in theory, had to pass 5 wpm so he had some idea of what it was he was evading. Since then, we have developed Lifer Tech Syndrome, Dick's bugbear. Characteristics of this syndrome, a big campaign dedicated toward deceiving both the world and oneself, include:

a. Joining NCI and playing like the code requirement was even a debatable issue within a five-year horizon. Never miss the opportunity to say or write 'Morris Kode'. Note Leland's nearly-indecipherable tag line.

b. Joining everything, subscribing to everything, going to Dayton every year. Activity signifying not a hell of a lot.

c. Entering into every discussion on 'leading edge' technology. Nothing, of course, is ever done just talked about. Knowingly pronounce everything in existence as a 'legacy mode'. Become the resident genius on arcanity -- you too can be the guru of 160 meter gray line propagation.

d. Where anyone has actually achieved anything, even a simple-minded code test, he must be attacked, unhorsed, and mugged. Larry has built a whole new hobby on these dipsticks.

e. Whining endlessly about slights real or imagined. The object, of course, is to punish verbalization of what everyone in the vicinity already knows. In communities of the terminally incompetent the crushing line is "You think you are better than everyone else." When the response is, "I not only think it I know it" it is time for the riot squad. Equality is another word for nothing left to lose -- or more precisely never having gained it to begin with.

I do not play the game nor do I tolerate it.

Dick NBK

Well said! Too many geezers sticking their heads in the sand and contributing to the problem.

Hang in there, Mike. You are welcome into the ranks of Amateur Radio (capitals here) with no disdain, animosity or judgment. For every vocal comment to the contrary, I think you'll find many more hams who are anxious for new blood and willing to lend a helping hand; it's what the hobby is all about; it always has been that way. Unfortunately, too many of the "old timers" tend to be shy and silent about growth in the hobby, but amateur radio always was a melting pot of differences, ages, philosophies and backgrounds. I may or may not agree with your politics, but I respect you as a person and a fraternal member of a wonderful community and that's always what made this hobby great.

I've always been amazed at the sincerity and openness of the amateur radio community. Someone on this newsgroup voluntarily sent me a couple of spare crystals at his expense when I needed them; another eagerly copied an instruction manual and schematic for an older piece of test equipment I was working on. It was all voluntary, with no expectation of remuneration or recompense of any kind. I think you'll find, by and large, that this community is like that. I believe that the brotherhood is still there and I believe it will rally when it really needs to.

Am I overly optimistic? I don't think so... I think there are enough folks who care about this hobby to make sure it doesn't end.

73...

Hi All,

A friend of mine has a couple of AWA RT85 transceivers (Type 1LM 82272)
covering 148-174MHz that have had their "frequencies removed", according to
the texter note on the wrappings.

He is activly involved with out local Volunteer Coast Guard and would like
to use these radios with our marine radio channels (around the 156MHz area).

Does anyone have any information of programming frequencies into these
units?

Any clues much apprciated.

TIA,
Gary MacMinn

You know, when I was a young lad, I always had an interest in things electronic and especially radio..... Once I actually found out there was a hobby called Amateur Radio, I wanted to become one of them. However, other things got in my way, like growing into a teenager with wild oates to sew, like work, like motorcyles and cars, partying etc etc.....
I was led astray for many years by the above but once I got my head sorted out and settled down (not throught marriage etc), I refocused, once again on the radio world. I got into scanners and receivers. CB radio was always a poor alternative to what I really wanted but it DID stir up the blood AND I did get in a huge amount of international contact AND I loved it. The only thing that really marred the CB excursion was the absolute idiots that persisted in interferring whilst on the air with their stupid noises and comments. These guys will always be losers in the radio world as they lack the self-discilpine needed to move on to something more serious and so they take it out on others a little more dedicated to their radio hobbies, by acting childishly.
Anyway,,, a friend who worked in and around government circles in the radio world over here,, saw that I was always interested in radio and asked me why I don't go for the Ham license. I porcrastinated for a few years then one day whilst helping him to install a few repeaters, with his encouragement I decided - I am going to get that license, come hell or high water.
I was always dead keen and good at mathmatics and knew a little on basic circuitry and electronics - Why Not???? I mean to say, I always wanted to become a "Ham"....
I enrolled in the very next radio course at the local Ham Radio Club. This went for 6 months - every Tuesday night for 2 hours after dinner. As it turned out, I started telling the tutors how to work out many of their own equations and could often work out the results in my head, quicker than them with a calculator. No!!! Not brain power,, just a good memory...
I studied for more than an hour in the morning before work (from 5am - 6am) and another 3 hours after dinner (apart from the above Tuesday nights) every night and mostly all weekend for the next six months. I got together with a few of the others on the course who were having troubles keeping up and helped them in the art of rememberring things, like equations etc. They knew the "radio" stuff but the mathmatics was getting to them....

Anyway,, came the BIG day and we all went into the exam room and sat down for the "up to" 3 hour long exam. I lasted just 28 minutes and was out the door. All that studying really payed off.....
I missed out on just one of the theory questions and got all of the law questions correct - a 99% pass rate. Once again, NO!!! not raw brain power, just a good memory.

Once the license came through the mail I was really proud, REALLY proud of myself and went out and bought some gear. The license entitled me to VHF/UHF only as to get the Full license, you have to do the dreaded CW test. For now the VHF/UHF license would do though.
I enrolled into the local radio club and was as happy as the old pig in sh_t for a while..... However, it was at the AGM (Annual General Meeting) that I got really put off the club along with a huge handful of some other more senior Hams.... The club was sort of split into little factions and each of them was only interested in their own little empire. All smiles on the outside but out came the knives at the election of the new club president etc...
I couldn't believe what I was watching as the whole club virtually split down the middle... To be honest, I personally think that a few of the older members just don't like newer younger members. Even a few older guys that sat the license with me said the same....
I too am 43 yrs and am every bit as self-disciplined and serious as anybody when it comes to my hobby... I even threatened to report a friend for illegally using another hams callsign and purchasing equipment, as he didn't have his own ticket and was constantly calling me now that I had mine. I never replied to him on the air but emailed him and told him on many ocassions to stop or else...
This went on for months and became very annoying. As soon as I popped up on the local 2m repeater, there he was calling me. He even followed me to more distant repeaters. I trasmitted from my base while he would drive to a nearbly hilltop and use his handheld. How I never replied to him in this time, I will never know.
He and I were both going to sit the exam together but he was just too layed back at the time and started calling me names when I got mine.... I also said that I would help him through the next exam but he only replied to that suggestion by telling me I was a "Know-all" and a few other names etc..... That was when I was going to report him. No not a case of 'tit for tat' but more that I told him that once I sign that dotted line, I would live by the rules... I still do.

In the last handful of years since I have been on the air, I have noticed that many older hams live in a world of their own with their head in the clouds. One big fault is that they think that all younger hams are nothing more than ex CBers and not of the blue blood so to speak and refuse to have anything to do with you if you don't have your CW pass...
I have absolutely refused to do the CW course as I cannot see the sense in torturing myself for another 6 or more months, then to sit the test and hopefully pass,,, only to NEVER use this outdated mode of dots and dashes. I truly can't see the point in it. Of course this puts me right off-side with "those types" who have passed the test. Honestly, some of them think their turds don't stink. I just stay right away from them. I quit the club and moved on.
HF ham radio is going downhill very quickly here and its because nobody wants to rack their brains for this ancient ritual called CW or morse or whatever you want to tag it. I have voiced my opinion on the matter with the correct authorities but they are all from within the "blue blood"

society and will have nothing to do with it. Oh ,,,, They did drop the number of words per minute needed to gain a pass (I am not sure from what - to what) it is now but I still think it's like bandaging an open wound rather than getting it stitched up....
In my opinion... CW needs to go,, just for starters. Then a few of the ancient Old Boys need to be axed and some newer thinking needs to be injected... The internet and cellphones are killing the enthusiasm here and the great gods of the radio world over here cannot see through their fogged up glasses.....
Also, in my opinion, anyone who thinks that CW actually has anyhting to with Ham Radio (apart from a nostalgic reminder of its roots) then they are part of the demise and need to re-evaluate their outloooks on Ham radio. I am not saying that CW should go altogether but it should not be a part of any testing.
I did download a few CW programs from the internet AND I started to learn a few strings of dots and dashes but I just cannot mentally understand why this ancient ritual has to be used in the testing procedure. It is for enthusiasts only. It reminds me of blood rituals that some people go through to get into some occults. That type of think is for that type of person.
NO insults to those who like CW, of course. BUT it's time to move on.

I am not sure if this is a worldwide trend or not but I do know that unless something is done quick-smart, then Ham Radio may well disappear from the face of the earth before you and I feed the worms. New membership here is down to about one-quarter, one-fifth of what it was when I went through. That was only 6 years ago.......
What has happened since then...? You and I know what because we are communicating via it right now....
Many of the older hams don't really get into the internet so they don't see how it is stealing prospective new members from the hobby.
At a guess I would say that there are many jealous eyes just watching and waiting for Ham radio to lose the use of many of their frequencies so they can get their claws into them....
We had better not loose any of them or they will be gone for good!!!!!

Hi Mike,

People always resent seeing something they worked for being "given
away", although I accept the lowering of requirements as a reflection
on the change in technical perspective.

I don't resent newcomers at all, or feel bad about them.

What I feel bad about is the devaluing of my license. Factually,
extra class tickets are not extra class any longer. They have been
downgraded. That isn't the fault of anyone except society as a whole.

The same thing happened to the First Class Commercial ticket. The same
thing happened to degrees in our schools.

I'm not complaining, that's just the trend in everything today. It
won't fix the lack of interest, it won't speed it along. It is the
lack of interest in how things work....and in doing work....by
most people today that drives the results....not the other way
around.

Someone said why not offer a way to improve things...but no one can.
It is a social issue, it isn't going to be cured by letting one peson
out of ten thousand or ten million talk to someone orbiting in space.

All the bitching in the world, or all the suggestions offered, won't change that. It's a fact of life, not a emotion. People as a group have to get excited about learning about how things work, and making things work or it won't change. It isn't WHO we talk to, but rather what we talk about, that has changed.

So keep struggling, like the rest of us did. Don't worry about the A-holes out there. They are just jealous and ill because they had to pass the code test.

If the truth be known there has not been a real code test since the VE's took it over.

I NEVER took a test under a VE. I took it all under uncle Charlie. And Im an EKTRA....Big deal. DOn't make me a better ham. Just makes me more diversified. In July I'll be a ham for 40 years. Another big deal....see what I mean?

Welcome to ham radio. Again...don't worry about the idiots.

Correct and well stated. Bottom line is don't blame the folks that take advantage of it. Are challenge is to help the new comers into the fold and show them how to do it right. Are we up to it guys and gals?

Ed --

It depends on what you mean by "we". If "we" is the average ham in general, I don't think we are really a dying breed. I would say that "we" are an evolving
breed. Ham radio has evolved from what it was years ago, and that is the natural progess of our technically based hobby. This is to be expected, and desired.

If by "we" you mean those of us that would rather tinker with old radios and nurse
them back to life, then yes, I concur that we are a dying breed.

I don't think amateur radio will ever completely die off, if for nothing else than the
reason that we can provide emergency communications as a public service. The
more our communications networks become integrated, the more fragile they become.
Look at any of the recent disasters in which hams have provided emergency communications;
why weren't cell phones or the internet used? The answer is that the infrastructure
for both of these technologies was knocked out. It will only get worse.

Ever hear of "information warfare"? Consider how our integrated communications are
suseptable to viruses etc. Think this is an unrealistic scenario?
Think again. War is no longer as we think of it in WWII or Viet Nam; people fighting on a
battlefield. It would be far more beneficial for a potential advesary to cause us massive
economic damage by shutting us down for a few days (if not longer) than an actual
physical attack.

God help us, but a well placed tactical nuclear weapon could shut down a sizeable portion

of our comm networks. That might take out a lot of ham gear too, but I'll wager we hams
up and running in a short time. Gads, are we actually at the point in our world where we
need to actually seriously think of EMProofing some part of our gear?

Finally, during a disaster, Joe and Jane Sixpack don't think to keep an emergency
communications system up and running. We in the amateur community do.

It is up to the Amateur community to sell itself to the public for what we can do to serve
the public. And, regardless of what particular facet of ham radio an individual likes (CW, SSB,
PSK31, BA, Computers etc), we all need to be prepared to render this service when needed.

Just my $0.02!

It has been years since I have seen one of these. Yes, it is a 500+ watt, tube type HF rig, probably 25 years old or so. The actual model is the FTDX-560. There was a whole series of these FTDX rigs including the 400 and the 1000, quite possibly more. I can't really tell you much more about them other than I would like to get my hands on either the 560 or 1000.

Source record: 62854

Hi,
I am new to this newsgroup, so if I am wildly off beam, I would appreciate a *gentle* suggestion about where to go :-)
That being said, I am looking for a Headset Adapter for a Motorola HT90 handheld two-way radio.
This is a fairly old model, and Motorola no longer stock any accessories for it, so I am hoping someone may be able to help me.
We use these radios for communication between the winch driver and the launch point at our gliding airfield, and if I can find this Adaptor, I want to fit an aircraft headset to the radio at the winch end so that the driver has some hope of hearing it over the engine noise.
Alternatively, if anyone had a circuit diagram for this radio, I might be able to change the connector to something more readily obtainable.
TIA
Cheers, John G.

Source record: 62855

Greetings!

I would like to trade my nice Icom IC-W31 dual band (2m/440) handheld for a Motorola field programmable VHF HT. Will consider any 'commercial' (maybe even another amateur) transceiver that does the PL tone of 229.1 -- That PL is an 'oddball' tone, and most amateur transceivers do not have it. There are some exceptions. I would really prefer a GP-68 in good shape with accessories. My Icom W-31 comes with 3 batteries (2 BP-173 batteries, 9.6V @ 650 mAh, and 1 BP-171, 4.8V @ 700 mAh), speaker mike (clip is broken, easily repairable), leather case, and charger. I know some of the Alinco HT's do 229.1 PL, but not all of 'em. The W-31 has cross-band repeat capability, dual receive, etc. Nice rig. Please e-mail with offers!

Greetings...

I have up for trade a very nice Kenwood TS-850SAT, complete with original boxes and packing, manual, and service manual. I obtained this approx. 2 wks. ago from the original owner, who kept very good care of his equipment. Received in a trade. Looking for something different. Would love to have another FT-920, as I regret having gotten rid of mine. Would consider an IC-746, FT-847, TS-940SAT, or perhaps a Ten-Tec Jupiter. Will consider any offer, or sell for $950 plus shipping. Paypal accepted. Electrically a 10, cosmetically a 9.5, only due to 2 VERY small dings on the top cabinet, above the frequency display. E-mail with offers!

73, es gud dx de N9LXX~~~

The schematic I have (Tiny one in 1991 catalog) depicts a 7.5 volt zener
that is switched into the cathode by relay 2 as well as a bias winding on
the transformer, probably where your idle current is set. As far as the
160m damage, there are a couple pairs of caps in the pi-network that need
to work for 160m. Also there is a separate input network for each band, so
that or the bandswitch could be damaged.

Try rec.radio.swap. There are some dealers there that have old stuff. By the way, that particular radio model did "funny stuff" while transmitting, if you attached a speaker microphone to the accessory jack. The problem was RF from the antenna getting onto the PTT lead inside the radio. Additional bypass capacitor and a series choke may be needed.

> equivalent. [snip]

What a bunch of bullcrap, Dick. I don't know of a single person that wants to "have it all on the strength of his codefree tech written test." Instead, what most of us (Techs) want is to be able to use the capabilities that the FCC has authorized, without constantly being harrassed for using those capabilities differently then you might use them (in other words, stop endlessly judging us).

In addition, like all human beings, we would not mind a little respect - not as a ham operator (I know we'll never get that from you, no matter what we do), but simply as a human being who wants to enjoy life without all the endless insults (the crap you wrote above or the "no-code equals no ham" nonsense, for examples).

And finally, some (not all - some don't mind the code tests and some have no desire to upgrade at all) want an opportunity to upgrade without spending weeks learning an absolutely antiquated communications mode that very few, if any, outside of ham radio uses anymore. By the way, describing code as an "antiquated communications mode" is not a judgement, a put-down of code users, or even an opinion - it is a fact.

Now, every single person that I've met who feels that way is more than willing to meet reasonable requirements (the written tests, for example), so it is not an situation of wanting something for free. Instead, they all seem to be saying they want a fair price for what is offered (and learning Morse Code is not a fair price simply because you once had to pay it).

I connect the coax directly to the LL after making a 4 inch dia coil
of the last 15-20 feet of coax to reduce RF flowing on the outside of
the coax.

The connection to the LL is made at the point where the length of the
LL has transformed the dipole's impedance to near 50 Ohms on the
operating frequency. See w6rca's web page of his 130 foot LL fed
dipole for details on matching in this way. Note that when used this
way, the LL is not simply a transmission line - it is a transformer.
It's length is critical, and is dependent on frequency.

The EPROM is mounted on a dedicated module Z-273 which includes
latches. If you don't have the module, the radio isn't any use to you
as these modules were extinct seven years back and the replication
cost is about $60 apiece.

Programming is NORMALLY done on a dedicated standalone box. There are
ways ....

If you have the modules, ping me an email (remove the obvious) and
I'll help where I can.

Peter

It also doesn't help that so many existing hams seem determined to run off anybody who wants to join, or does join, this service. For example, the resistance the codefree Techs have faced is more than enough to drive almost anybody away. I've never personally experienced such pervasive, and incessant, hatred in my entire life.

Richard McCollum wrote:

> repeat after me: Usenet is not amateur radio.

This is not limited to Usenet, Dick. I've seen what he describes throughout the ham community - club meetings, on-air contacts, ham fests, and almost anywhere else newcomers run into other hams.

Heck, I've even seen this in action recently at a local civil defense meeting. An Extra was promoting a certain civil defense procedure involving hams and suggested during his presentation that Technicians be excluded (no reason given). Had I not been present to speak up, and had I not once worked for this civil defense office, I'm sure he would have gotten his way.

Whatever the case, Usenet doesn't exist in a vacuum - the negative opinions about newcomers voiced here by older hams (older as hams, not age) remain with them outside of Usenet when they're participating in "real" ham activities. And the anger, and hurt feelings, because of the opinions voiced here remain with the newcomers outside of Usenet also.

Good observation. :) I personally think that the level of technology has gotten too high for our own good. I am not all that old.. and when I was young, preteens to mid twenties, people were still curious about how things worked.. kids took things apart (and attempted to put them back together) just to see what made them tick. In the past 25 years or so, technology has reached a point of everything becoming basically a "black box".... which is to say, if you put everything in a VLSI chip, it's not easy to know what it does, or how it does it. I'm sure many of you built crystal radios when you were kids.. now, you can't even find the parts to build them (except the cheap, worthless kits at RS). Also pretty sure that you opened up a table radio or two (or a pocket transistor radio) and played with the IF and RF circuits to see what they did. (I opened my folks brand new table radio, $59 1965 dollars, and pulled out all the tubes to see what they were..... I didn't know there was a tube diagram on the bottom of the radio, so put them back from memory... this resulted in a $12 repair bill and an ass beating..*ggg*)

Now, if you open a radio.. you MAY see a variable capacitor.. but everything else is IC and/or ceramic/crystal filtering... (which, btw, offers a very BAD sound compared to an actual LC tuned circuit)... no wonder no one cares anymore... there's nothing there to gain anyone's curiosity.... :(

I have a Drake TR4C HF Transceiver with the 34-PNB Noise Blanker installed, a Drake RV-4C Remote VFO, and the AC4 Power Supply for sale. The front panels are in great shape. The cabinets need some touch up or a respray of black paint.
The TR4C needs cleaning. The RV-4C chassis and dial look new. I checked them out on receiver and they work fine. I don't have the manuals or a mic, so did not try to transmit. The SN for the TR4C is 34K. The SN for the RV-4C is 19K and the
SN for the AC4 is 59K. Price is $475 plus shipping. Charlie, K5MBX

Yes, I think all of the above. There is a very active FT 817 group on Yahoo. There are a number of commercial antennas, including pedestrian mobile, one commercial case (plus a bunch of camera or other ideas for cases), battery systems (get the 1600 mAh 23-331B pack from Radio Shack for $25), maybe a Collins filter and a bunch of other stuff. See the following: http://groups.yahoo.com/group/FT817

Since when is giving an opinion to be considered bitching
and moaning? If your house was on fire and I noticed it
before you did, would I be bitching and moaning if I told
you about the fire? I guess I know what to do if this is
ever so. I surely wouldn't want to disturb you by laying on
those negative vibes.

There is no solution that would enable us to reacquire the
magic that has been lost. It occurs for only a certain
period of time during the development of a technology and
cannot be recaptured.

I used to work on cars as a teenager for hours without end.
I'd hate to see a kid trying to do that today with today's
cars. It just isn't within reason. It's not the kid's fault.
Technology has changed cars, just as it has changed amateur
radio. We are merely stating a fact.

In the respect that you have mentioned, nothing has changed
at all.

Ever since I can remember, hams have been just like every
other group of people I encountered throughout my life. Some
are friendly, some are shy, some are curmudgeons, some are -
well, you get the idea.

Get this notion out of your head that you have joined some
huge fraternity of pious people that belong to a secret
society and who will gladly embrace anyone with a ham
license. It may have been that way in the spark-gap days (I
wasn't there), but it hasn't been since then. Yes, there may
have been (and still be) clusters of hams that behave this
way, but they are the exception.

Get your expectations in line with reality and you will
enjoy the hobby much more. Hams are just people - like
everyone else. No more, no less.

Some of the attributes ascribed to "geezers" are part of the
natural aging process. With any luck at all, you too may get
to the aspired rank of "geezer". Wouldn't it be nice if
those of younger years and clearer minds had a little
compassion for someone, such as yourself, whose mental
acuity and physical deterioration has affected their outlook
on life?

Once a noted wealthy ham went on a safari to Africa and came
home with a monkey. He brought the monkey to a club meeting,
and cornered the ham class guru. "I'll give you a hundred
bucks to get my monkey ready to take the Tech test". The guru
demurred. "Five hundred bucks." More denial. "A thousand
bucks." Finally the guru said "OK, but it will take 18 months."
"Deal" said the ham with the monkey and departed.

"Hey, old buddy, what kind of a deal is that?" said the guru's
pal. "Look", the guru said "in 18 months anything can happen.
The ham can die. The monkey can die. And even if not, you
ought to see some of those folks that I have to prepare....."

As I have stated elsewhere, in other posts on this thread, there are curmudgeons, or worse, in every venue life offers. Unfortunately, it only takes one to sour someone's afternoon. I wouldn't take it personally, but would look for another contact with someone that wants to communicate. Like me, for instance! I don't care if you know the code or not. 8>)

Hello,
i have a big problem with a JRC 345 HF Receiver, i have made a PERL
program
to control this radio with my Linux pc. After a few remote command from
PC
to Radio is not possible to control the radio.. i can switch the
frequency from remote only 10 times and then the radio will stop the
remote controll. I have try other
pc and other tipe of program but the problem is back again. Anyone is
using
here a JRC 345 with any type of Remote Program ???

Best Wishes and thanks in advance Andrea Borgnino IW1CXZ - Rome Italy

You know, that isn't my point at all. I don't need to be embraced by anyone. I'm just making note that there is an element in the service that has a surprisingly strong dislike for newcomers. This can be discourageing to some. I haven't seen that level of disdain in any of the other organizations I've belonged to. Not to this level.

I'm already age-qualified, Ed, but I like to keep my mind open to the natural progression of change. It keeps me way behind my physical age. More folks ought to try it sometime. It'll make them feel good about themselves and the world again.

How true! I've only received my license recently after being away from radio for 40 years. Yes, I read the book and did the internet practice tests, but that gave me book knowledge, not the practical knowledge only an "Elmer" could provide. Sure I'm licensed, but it's gonna take me a long time to learn anything about this hobby! Needed info that was regularly shared in the days of olde! Let's stop bitchin' and start keeping up with the times. And for you "Geezers" - how about realizing that you are the masters and the youngsters can't take that away! But true masters readily pass along the knowledge and experience they've accumulated in all their years!

I must live on a different planet. In the last two cities I have
lived in, Eugene Oregon and Prescott Arizona, I have never seen what
has been described and discussed in this thread. Both radio clubs
enthusiastically welcome young and old alike, and it never mattered
what class of license you had or were working toward. My present club
meets at a middle school that has a radio station provided and
maintained by the club. We work very closely with the students in
several projects and in helping them get their license. Maybe the
evils of the big cities foster these negative attitudes, but you sure
don't see it where I live. I don't hear it on the repeaters, at local
hamfests or anywhere else around here. HF is another matter.

Another valid statement by Dwight Stewart. Now all you that love to
badmouth the 'new guys' I challange you to pull out a QST. Check out the
articles concerning emergency and disaster communications. Check out the
calls of the operators....

Notice how many 'new guy' calls are there? Now check the database and see
how many are 'no code geeks'.

What have you oh no it all old timer done FOR THE SERVICE LATELY???

Now shut up.

Thats true...but...most new comers seem to think they know it all. Perhaps both groups need to knock it off and pay attention to whats important...keeping Amateur Radio alive and viable.

Look folks...this argument is not new. It was the same when I got on in 1961. The difference was I was willing to listen, and some were willing to teach. See my point?

Source record: 62805

Hi Joe,

Simply put, the TS-430 is a lot of circuit in one small place. Over time, my 430's get funky with loose connections, cold solder joints and other quirks, not to mention the lithium battery change out.

If your carefull, a can of clean camera air and the lid off will allow you to spray out any dust. From there, I would carefully wiggle or reseat some of the obvious connectors. I'm really into it working right so I dab a bit of Craig Labs DeOxit on each plug pin with a Q-tip. The tin/lead pin connections will work much better after that.

cheers
skipp@pilot.ucdavis.edu

3932. Intermod when using VX-5R as a mobile with mag-mount antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-20 17:38:18 UTC
From: sidditherS <ephemeral21@hotmail.com>
Message-ID: <9984m2$409$1@bob.news.rcn.net>
Source record: 62808

I have had my technician ticket for a couple of years and have been enjoying my Yaesu VX-5R. It is a remarkable unit - in general I get good audio reports, I like the multitude of features, the long battery life and the very rugged construction. It is totally deaf on AM and SW, but that is not that big a deal for me

I recently started using the HT in my car with an MFJ dual band mag-mount antenna. I'm in the Washington DC area, so you can imagine the RF environment. With this set up I am getting all kinds of howls and hash from intermod throughout the ham bands.

My question for you experienced hams is this - is this a problem one will always have trying to use any HT as a mobile in this manner, or is this a known weakness in the VX-5R? If it is, any other HT's you would recommend that are more resistant to intermod? It doesn't have to be a tri-bander, or even a dual bander.

Thanks in advance and 73's,

David

....and Brenda, remember you are not allowed to have any EMISSIONS at
any level outside your allocated segment.

Many people miss this, and think if their segment goes from say
7150-7300 they can park on 7152 LSB and be legal. Technically it is
your responsibility to be sure absolutely NO emission products extend
outside the authorized segments you are allowed to use.

Many Generals on 75 meters and 20 meters break the law, as do Extras
on 40 meters or 75 meters, by getting close to the band edge.

AVOID TRIPOD WEB SERVICES

Last weekend, Tripod removed all of my web
pages for "violating their acceptable use policies."

I could not figure what I had done, but I'm not
one to whine and I moved my pages to:

http://www.qsl.net/k7on/

Now, I receive the following:

Date: Tue, 20 Mar 2001 04:38:43 -0500 (EST)
From: membership@tripod.com
X-Authentication-Warning: bos-uhaul1.tripod.com: web set sender to
membership@tripod.com using -f
To: k7on@earthlink.net
subject: Your Tripod Membership

Dear Tripod Member,
We apologize for the removal of your site over the weekend. Due to some
technical errors, we mistakenly removed several member sites and are in
the process of restoring them. We did not single out you or your site,
please accept our apologies, your site has now been restored.

Sincerely,
The Tripod Team

Dwight, if you think it thru there are bits and pieces of this picture that do not make any sense. You are getting pervasive and incessant hatred from a group that by and large could not agree on lunch, when to have it, or the merits of pastrami on white with mayo. HF amateurs could not qualify as an armed mob let alone an army. Why might this be??

Since its inception in the early 50s the upgrade rate for Techs has been about 15% at best. This is an entry-level license?

Yes it revolves around Morse testing, not however Morse itself. The reality is that in most HF stations the key exists to allow tune-ups (it's a bitch on SSB) and precious little else. Determined dittyboppers would much rather see no-code than 5 wpm for the good of the mode. You learn so many bad habits at 5-10 wpm that zero is a better starting place. So what is all the flap about. How are they related?

Better yet, walk into your club with the 5wpm cert and the tension level will drop about 40db. You are no more savvy about anything than you were before and have earned a learner's permit to dittybop. Why? Pass Element 3 with the code cert and you become a part of the woodwork.

It is not about VHF, it is not about operating practices, it isn't about age, and those who value their seniority get about as much flak from their contemporaries as they get from you. It is all about a lousy code test and at 5 wpm at that. But the same problems existed when it took 5 for the Tech and General was 13.

The fact on the ground is that for at least the next five years HF Amateur licenses are going to require an inconvenience called a code test. We can argue shoulda coulda hafta from now on but that is the reality. The 15% I

mentioned have long since downloaded Morse Academy from http://ah0a, and blunderfutzed their way to success or are doing so in silence, calmnity, and dignitude. These guys you don't hear from long enough to generate pervasive hatred. Hmmm.

So knowing about the success rate of Techs in general for 50 years (and incidentally being one of the 15%) just what is my ethical duty when he walks in to the club, the restaurant table, or my life seeing the call sign plates? The fresh newbie unless he lays his freeband stories on me as if I should give a shit will get nothing but positive ego-boo. After 90 days he gets the prod in the ass to get going with the code. At somewhere in the 6 mos to a year, he gets written off as one more loser swallowed by the Tech trap. Sorry if it bothers you but that is the size of things. In the days of 5-year licenses the word was that the only dishonor to a Tech was renewing it.

Now we come to Lifer Tech Syndrome. When the decision is made not to pursue the code for whatever reason -- remember that you do have something of the Cathedral Problem here; the OTs did pass a more substantial code test so you are unique -- strange things seem to start to happen. Now I am over 25 years since my Extra and forever since the Advanced (never held a General) so my viewpoint may not be among the best but from this exalted pulpit it looks like things in the following categories seem to happen to those afflicted:

Morse is defined out of existence as a 'legacy mode' and pissed upon at every opportunity. The Lifers never miss a chance for Morris Kode.

Great and lengthy discussions occur about wonderous digital techniques none of which ever get built.

Great mythology gets built up and believed about OTs, Wouff Houng rituals, the nasty ARRL (one of the world's truly clueless operations) and the vast conspiracy to deny the codeless their due.

Any one who ever passed 20 must be attacked, unhorsed, and mugged. Even tho we see thru the self-deception it does cause us old guys to get a little testy.

Vast effort is expended at the peripheral aspects of the hobby, every publication is memorized, and periodic pilgrimages taken to Dayton and Hiram Percy Maxim's grave.

When prodded about the code requirement they scream "Bigot" and worse.

OK, the view from the other side. A lot of us read a good part of the frenetic activities of the lifers as a big smoke screen to cover their unwillingness to simply clear the 5wpm hurdle and move on. When faced with self-deception the OT has an ethical problem: people who go along with and encourage unrealistic behaviors are known as 'enablers'. Most of us are of an age where we have dealt with alcoholics, addicts, or simply loafers. We do not play the game and in fact can not without becoming part of the problem. Kind of like talking with pirates on 10 meters.

Are us OTs a bit quick on the trigger? Yes, more than likely. Do we simply define Techs as lifers when they are merely slow to grasp reality? Certainly.

Are we killing the new blood of the hobby? Probably not. One cannot kill the already dead.

Always ready to be educated. You have a better explanation???

Dick N&#65533;BK

3936. Re: TS 430 Question

I have a TS-690 and i had a very similar problem....

I would turn it on and everything worked, except the recieve audio- it showed signal, but there was no audio.

I had purchased a used 40 amp power supply that day, and after playing with wires and knobs for an hour, i threw the meter on the power supply....It was showing 22 volts....

Hooked the radio back up to my UPS battery (20A 13.8 volts) and it worked fine..

I contacted the previous owner (a cb'er) and he had the power supply "cranked up" to run his 2510 and dx-350...

I cranked it right back down to 13.8 volts and the radio has worked fine since....

Have you checked your power supply?

hope this helps

AWA Member Check-In Request

The Antique Wireless Association would like to determine how many of its members are now on-line and able to access its web site. If you are currently a member, we'd appreciate it if you would take just a moment and click on the link below to reach our site. Then click on "Members Please Check In!" on the main menu and fill in the name and address blanks as directed. It's as simple as that, and will help us determine how effective the internet might now be as a tool to communicate with the membership at large. Check-ins cannot be accepted at this e-mail address, and no reply is necessary.

Thanks,
the Antique Wireless Association

This is a message from the Antique Wireless Association,
Box E, Breesport, NY 14816.

I don't think so.

> but I meant it then and mean it now.

I have no doubt about that Richard. Fortunately there are few like you out there. How I, or any no code Tech, chooses to follow their interests in Ham Radio is up to us. We don't have to meet your personal list of "approved activities" to be considered "real" Ham Radio operators. If that does not sit well with your vision of things, too bad, cry in your coffee, and move on.

License class advancement is not the sole goal in Ham Radio just as it is not in other areas of life either. Not everyone wants, or needs, to reach the Extra Class level the same way as not everyone needs to get a Ph.D. in their chosen field.

You strike me as the type of Ham who feels one is not worthy of being called a Ham UNLESS one follows in the foot steps you seem to feel is the only path to that title. You also seem to be unwilling to let others follow their own course, their own interests, and make their own choices in Ham Radio. Your vision of the path to being a "real Ham" is not the only one, nor is it necessarily even a good one. So you attempt to do what little you can to impede to process by refusing to help, instead you elected to hinder the process by shifting the burden to others. Seems a pathetic attitude where if you can't have it your way, you just wash you hands of the whole thing, such as being a VE, when it has anything to do with no code Techs.

As far as my tag line goes, if you can't understand it, try harder. I know plenty of other Hams, and non Hams too, who know exactly what I'm talking about. I will give you a hint however, it's a tongue-in-cheek joke about CW. If you can't figure it out after that, then your a lost cause.

Well, at least for the effort I've put into the Morse code so far, I
would guess that they might think I was a bit serious about hamming.

Hmm, I guess I failed that one because I was around a year before I got
to studying the code and missed the deadline! I know I'm going to feel
dumb for asking this, but what is ego-boo?

> little testy.

Could be a chicken and egg thing here, Richard, I'm not sure. I
certainly don't want to disrespct the OT's, I have often thought how
much more difficult it must have been for them to pass thier tests,
especially the Morse Code part. Honestly, that has been just about the
most difficult thing I have ever worked on. I think it is because I have
bad tinnitus, and am used to tuning out my ears. Obviously I can't do
this with Morse Code, so I'm having to relearn something pretty fundamental.

Hi Folks,

I got my CW ticket and await an HF xcvr (ICOM IC-730) but I'm wrestling
with a good single-point source for a telegraphy key.
I won't go into all the particulars, but if anyone can give a green, yet
aspiring CW op advice or points to consider for my First key I'd really
appreciate it. I a little torn on the whole thing; paddles or straight key,
switches, material, why a key costs $400, etc.

Drink, WP3JQ

Welcome to the CW community!

All things CW can be found here:

http://www.morsecode.dutch.nl/index2.html

including discussions on a wide variety of keyers. BTW, the overwhelming
majority of German high speeders use the Schurr Profi paddle and the
ETM9/Logikey. It's expensive, but since CW is the thing I am primarily
concerned with in ham radio, to me it was important to have a keyer that
I feel really comfortable with. In my 20+ years of CW I have tried many
keyers, but the Schurr finally is the one I have been looking for all my
life.

Drink: I would purchase an inexpensive generic straight key. They are not
well made and won't hold up well. But
they are adequate to learn on. And in doing so you will slowly learn what
you do not like about the cheaper key
and this will educate you in what you want in a good key, (and it will only
cost you about 15 $).
More expensive keys have precisely machined parts, adjustments once made
will stay locked, Bearings on pivots
allow no side play, contacts are silver or gold plated and do not tarnish
easily. they are designed with more ergonomic
arms for ease of use for long periods of operating, have weighted bases so
they don't jump around; And I do not think one can really appreciate a
quality key until you actually feel how well it works. You do not have to
pay 400 bucks plus for a quality key, a lot of this has to do with the
finishing of the key such as chrome silver or gold plating and collector
value.There
are many manufacturers that offer excellent keys for 150.00 or less.
I would recommend trying before buying if at all possible, because the feel
of a key is really a personal thing that is
developed by experience.

Hi Drink,
If you want to enjoy CW, don't get a straight key. Get iambic paddles
and a keyer. I recommend the Bencher paddles as the best for the buck.
For the actual keyer, I've built about a dozen over the years, and
prefer the CMOS Super Keyer III, available from Idom Press. If you
prefer something pre-built, the same keyer is available as the
Logikey.
73,
Barry W2UP
P.S. You may want to get a new callsign if you do much CW :.)

The pro's and con's on the rig were reviewed in the July 2000 QST. That review is also available at the member's only portion of the ARRL web site, where you can also find an expanded lab review of the rig. Seems like it got pretty a pretty decent review.

From: 0junk4me@interl.net
Message-ID: <36Ut6.212$dp4.4526@newsfeed.slurp.net>
Source record: 62840

Hi folks,

I purchased this radio to leave in my van. My xyl uses my van a lot and she travels all over the place and the van sits all sorts of places. I needed a low cost radio with reasonable power output and don't want to pull it out of the vann all the time. THis seemed to fit most of those options reasonably well.

ONe thing I need is tone capabiklity so she can work a wide area coverage system. Has anybody installed the Comspec tone board in one of these radios who can tell me how to go about it?

POsting to the newsgroup is fine as it might just help somebody else out---especially if Google ever gets their act together.

Btw, if you respond keep this subject line or a similar subject because I only scan subject lines and download those articles of interest to me for offline reading.

Thanks and 73.

that jack allows you to hook a transverter to your radio to give you bands
the radio dont have like a 432 MHZ transverter or what ever have you and
this jack reduses the output power so it doesnt blow up the transverter
either

You may well be the exception that proves the rule. The only reasonable suggestion I might make is to find some software (if this is what you are doing) that allows, as Morse Academy does, one to vary the tone from the usual 750 Hz or so.

When the exam comes, by all means get with the VEs beforehand. Aside from being a nice and competent bunch they are required to make reasonable accommodation for physical conditions. I have done several oddball exams in my time.

Circumstances alter cases and yours is one I am surprised some of the locals have not at least tried to help you with.

i think you will that to be the case with any multi band radio there front ends
are so wide open that they pick up everything
there are filters you can use to reduse that but it also reduses what you can
hear out of band i know Par-electronics makes a intermod filter that will
eliminate intermod on 2 meters and 440 but you will only hear those bands you
wont be able to hear outside that bands

Hey, I have a question... has anyone tried the CLIFFDWELLER II antenna?? I'm moving to a small neighborhood and may need to be a bit stealthy... are these any good? What's a good way to stealth an HF antenna? I know the attic is an option, but how good is the setup? will an attic antenna really work that well??? what about commercial vhf and uhf? What about dreaded RF into everything in the house? I have only used an 80m dipole my entire 'career' so any advice on another equally worthwhile setup be it dipole or unobtrusive vertical would be great.
Please email direct and Thanks!

3971. Re: IS Ham Radio Dying? (Was Newark Store)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-21 03:25:08 UTC
From: Johnny Neutron <johnnyneutron@juno.com>
Message-ID: <9996t7$92rv$1@ID-54995.news.dfncis.de>
Source record: 62846

In response to several posts I've read in this thread. here are my observations from outside the hobby.

Is Ham radio dying? I'd say yes. But take a trip around the AM or FM broadcast bands one day... listen to all the distorted, overmodulated and otherwise badly engineered and poorly programmed excuses for radio stations. So, broadcasting is dying too, but for different reasons. Corporations are scooping up radio stations like peanuts and good radio engineers who care about their craft are leaving the industry in droves.

Consider HF broadcasting... same thing. There used to be an air of quality and excellence in HF broadcasting, but no more. It's digressed to a handful of "patriot" and religious stations. Good case in point:WWFV. For the most part, *pirates* care more about good radio than most licensed broadcasters.

I have 20 years in electronics and radio engineering. I *love* radio and tinkering with electronic circuits. I personally would enjoy the ability to work HF, but I have no desire to continue fighting to learn code. I've been through this "code test" routine since 1974 and have never managed to get it down, even at 5wpm. I always believed that if I could have knocked out that stupid code test, I probably would have even better knowledge of RF than I do. But for whatever reasons, my ears just can't seem to connect the dots and dashes with my brain. So, no novice ticket.

The "no-code" tech license? What's the point? I can go to Radio Shaft and buy full-power GMRS rigs that will allow me to meet my needs with no license application or test hassles whatsoever. All I want from V/UHF is reliable communications over about 5 miles for camping, fishing, outdoor work, etc. I have no desire to sit and rag chew on the repeater for the halibut.

How then has Ham radio come to be in the state it's in? I've watched the division the no code tech license has caused in this hobby from the outside. It's sad that these old-timers hold such a grudge in their arrogance. Things change and they should either accept it or hang their key up because THEY are driving people away from the hobby. When Hams can't do anything else but bicker and nitpick about code tests, how can they expect the hobby to attract anyone?

I think in many cases these "techies" are dissuaded from persuing any advancement in the hobby just because of this arrogance. Why should they bother when these old-timers are just going to tear them a new exhaust hole over something as benign as morse code? IMO, doing away with code tests will be the only thing that can save Ham radio from it's pending demise. CW has been outdated for years and it's time to stop requiring people to have to deal with it.

Also, many people still associate Ham radio with CB'ers who tear up spectrum with their overmodulated kilowatts and interfere with everything for miles around. However, when I hear some of the Hams on HF acting like they just came off of 11 meters, I can see why that hasn't changed. In the last ten years, a lot of crap has came about in the ham bands, even HF. Of course, a lot of it's simply people acting the way they do off the mic the same as on. Boys will be boys whether the TX lamp is lit or not.

The bottom line is: Society has headed downhill fast over the past decade and it's taking everything else, including Ham radio, with it.

I'm 38 and have experienced this already. Hopefully I can at least stay
"moderately" deteriorated until I'm OLD! Age has nothing to do about this...
it's all ATTITUDE!

I learned a LOT about radio working with my OT chief engineer who took the time to mentor me and work with me. I always felt that no question was stupid. A lot of other engineers I've worked with assume you know it all and get pissed when you ask them something. Again, it's all in attitude.

> Needed info that was
> regularly shared in the days of olde!

The same can be said of the internet. Five years ago, it would have taken five minutes to find how to open up this Motorola SP10... I've looked for 5 hours straight and all I've found that wasn't ads for 2-way shops was someone else who asked the same question in a forum somewhere, but never got a reply. SO, the 'net has turned into a big, frustrating advertising medium and the useful info is either gone, buried or "pay to access" now... what a joke!

> Let's stop bitchin' and start
> keeping up with the times.

I'd be a Ham but for the stupid code. My brain just can't seem to catch it. As for code tests, liken it to having to understand how black and white television works in order to get cable TV.

This is a true statement. IMO, the old "retro" circuits are the best. You
can usually tell what fried in them and fix them, let alone that they
sounded better.

I was speaking metaphorically and did not intend to ruffle your feathers. However, I do see so many people become disappointed when they discover that this or that group of hobby enthusiasts are merely people, just like everyone else.

Our hobby of amateur radio is one that consists of mostly talking. Naturally, those with hostile attitudes will be revealed much sooner than in a group of model airplane or motorcycle enthusiasts. The loudmouths really stand out in our hobby.

I have a VX-5R and thought it was broken because it wouldn't transmit while connected to the wall charger. It would make a funny noise and do a power on/off cycle with the accompanying reset. Unplugged it worked fine. It turns out that the wall charger just doesn't supply enough amperage to transmit at the higher power settings. To transmit on the higher power settings, I have to use the battery only or the car charger--or any source capable of supplying more current. You probably already know this. However, that argues against the theory that the LiIon battery is being used at all times. I also connected a "bare wires" charging plug directly to a 12volt car battery with no damage under the theory that the current limiting has to be in the radio circuitry--not in the external source. After all, the car charger delivers similar performance to a straight 12 volt battery connection. Your mileage may vary and make sure you have the polarity correct. My thinking is that, if your transmitter is burned out, it is because of the fact that this radio runs hot when transmitting (possibly also a faulty component) and not because of the source current available.

> power on 2m. The other bands works fine so the main poweramplifier must
> be allright since all bands have same amp-module.

In my understanding, even when connected to an external source the radio still operates from its LiIon battery. I successfully applied an external voltage (think it was 6.4V with a current limit of ?400mA? [have all data at home]) because I couldn't use the provided 110V wall wart in a 230V country. Can even remember a posting of a guy who warned from connecting the unit to a 6V car battery (no current limit) which would almost certainly lead to damage. All this applies to my VX-1R, but assume the VX-5R is not too different in this respect.

Your statement sounds typical for a 38 year old. No
disrespect intended. I was 38 once myself.

Wait until your hearing and carotid artery has deteriorated
enough that you actually hear wrong words and sentences that
bear no resemblance to what was actually said. I can tell
you with certainty that this happens and it has nothing to
do with attitude.

Wait until every day you endure pain without end that
interferes with your sleep. Ever hear of sleep deprivation?
Until you've been there, you haven't a clue. Attitude has
nothing to do with this.

Wait until nearly all of your family and friends are
deceased, the culture is speaking a foreign language and
even the damned television doesn't make any sense. This WILL
affect your attitude.

Whatever happened to looking out for children and old
people? Whatever happened to having respect and
understanding for those that built your world and took care
of you when you were young and helpless? Do you take to
heart every word that a child says in anger? Of course not.
The same tempering should be used for some older
individuals. Give them the benefit of the doubt. It doesn't
cost a thing.

With any luck at all, most of us will reach the age when our
presence of mind and our body will not function properly. I
hope when that happens that you will find yourself among
compassionate people.

I'm not speaking directly to you, Johnny, but to all of the
readers of this newsgroup. If the shoe fits, wear it. If
not, just nod and move along without taking offense.

I recently got my VX-5R at HRO on sale for around $300--but it was a hamfair and I bought three of them (my two sons and I are all new hams), dickering with the manager for a good price. You could go to the HRO store and try bargaining. Also check out:

http://www.aesham.com/index.html $320
http://www.radioinc.com/ $319

Plus shipping, etc. AES had it on sale a few weeks ago for $299 but it is back up now. HRO and Texas Towers are more expensive. This is such a nice rig, who would sell a good late model one? Buy new and avoid the problems.

Good luck,

N0SY

"mvogt" <mvogt@rdinstruments.com> wrote in message
news:3aa43b15$0$7358@wodc7nh1.news.uu.net...
Hello,

I just got my Technician license and I am looking to purchase a small, lightweight radio for backcountry skiing and backpacking. Since I carry this on my back, every fraction of an ounce counts.

The people I have talked to so far (examiners and sales people at HRO) indicate that the Yaesu VX-5R is the radio for me. It is a little bit pricey so I was considering buying a used one but the only place I saw it was at Ham Radio Online.

Does anyone have any experience buying used from this source? Also, the used VX-5R's that I saw on this site seemed to have a modification for some early production bug. Does anyone know the details of that and whether a radio with the fix would be ok?

Thanks in advance for your help.

Mark

Just a few words in defense of Morse Code..

I'm no good at code either.. I barely made my 5WPM to get my Novice ticket.. and that after working on it for 14 years.

However.. code has a place.. in an emergency, when conditions for phone commmunications are extremely bad, code can get through. It is the only thing that can penetrate extreme QRM conditions and still be copyable.

It should not be used as some sort of badge to prove you are a ham.. but it has by no means outlived it's usefulness. I hope that there will always be those out there that know it and can use it. It may be the only thing that can do the job someday.... I know it's fiction.. but remember how the good guys finally won in Independance Day.... they communicated over jammed frequencies using Morse....

Try to remember.. everyone has something they can contribute.. and we can learn something from anyone.. even those that may be deemed idiots.. if we just pay attention.. :)

3991. Get help for selecting VHF wireless microphone

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-21 07:54:01 UTC
From: Joshua Lo <joshualo@vtc.edu.hk>
Message-ID: <999m35euq1@dragon.vtc.edu.hk>
Source record: 62767

Hi
Would anybody help me for selecting a suitable VHF wireless microphone?
Because I am using a SONY WCS 900MHz wireless microphone for voice pickup of the speaker during the meeting or sharing, but the performance is not satisfactory.
It is always interfered with the noises, even the distance between the transmitter and receiver is less than 1.5 meters and I have already tested the performance of three sets of this product, the result are the same. Not satisfactory.

I am now want to source for another set of Wireless Microphone (VHF). Would you please refer to the following working condition and the product information to give me some comments and advises?
Does the power of the transmitter have significant difference for 20mW and 50mW for my application?

Working condition: The maximum distance between transmitter and receiver is under
10 meters. (in Hong Kong)
It may have one or two concrete walls and peoples seperating from
the transmitter and the receiver.
Portability: can use bettery for both transmitter and receiver.

Product 1: SAMSON Camcorder VHF wireless microphone
Transmitter : model VT3L, RF Power,20mW;
Receiver: VM1 Double antenna, Single Conversion Super Heterodyne Diversity (I don't know whether it is true diversity or
phase diversity and the actual performance between these two),
sensitivity: =<6 micro volt @ 20dB S/N

Product 2: SHURE Camcorder VHF wireless microphone
Transmitter : model T1, RF Power,50mW;
Receiver: Non-diversity single antenna,
sensitivity: -109dBm (0.8 micro volt @ 12dB SINAD)

I will not consider buying the following product, because it cannot use bettery for the receiver unit. But do you have any comments for the comparison between product 1 & 3. Since there is only the difference between the Receiver Sensitivities and with the same transmitter unit VT3L; and I had the experience (very good performance, without any noise) in using an OLD model SAMSON VHF wireless microphone which is nearly the same as the product 3.

Product 3: SAMSON VHF wireless microphone
Transmitter : model VT3L, RF Power, 20mW;
Receiver: VR3TD Double antenna, Single Conversion Super
Heterodyne Microprocessor True Diversity
Sensitivity: <3 microvolt for 20dB SINAD, < 10 microvolt
for
50dB S/N

Thank you very much for your advice in advance!

Regards
Joshua Lo

Beautiful VX-5r, Brand new in box. I bought this to help a friend out. Ham meets girl. Ham marries girl. Girl becomes Ham. Boy buys matching ht's. Girl runs off and files for divorce. True story. Anyway, I bought the ht from him to help him out. I opened the box new and charge the ht just to make sure all was ok. It is great, but I don't need it. It works on 2m, 70 cm, and 6 meters. It is also a general receive receiver. Great sound just to listen to. Very broad freq rec capabilities. $265 + shipping.Check it out http://yaesu.com/amateur/vx5rtx.html

My dad always told me, "You get what you pay for." I guess since Tripod is free, you can't complain. I keep several pages on Tripod...never had a bit of trouble. I also keep every file on Tripod's site on my computer just in case there is ever a problem. Haven't had to use the backup plan yet and I've been with Tripod for about 3 years now. I guess it's a "sign" you should keep backup files of everything on your computer anyway. You HAVE been doing that haven't you? Ever "lost" anything on your computer at home?

> prefer something pre-built, the same keyer is available as the
> Logikey.
>

I agree with Barry. When you start CW, you don't want to be
worrying about how well you are running a straight key, in addition to
sending and copying code. Unless you are truly rhythm gifted or are a
professional or skilled amateur musician, I would definitely recommend
going with a paddle first. The Bencher is a fine choice, and will hold
up for a long time, as well as giving good service.
After you are more accustomed to CW, then try the straight key. I
use one from time to time for fun, and do fairly well with it. The
reason for that is because I learned first using the paddle. It's much
easier sending on a straight key after your ears and brain are accustomed
to the sound of good code.

Welcome to CW. Not the fastest, not the most glamorous, but
certainly the politest and most elegant.

73,

Adam, KM5N

I've had my best success so far with the ARRL CD's. That and by being sure to be relaxed before training sessions. That helps a lot. The local club members have had a few suggestions, such as changing frequency of the audio, and listening to W1AW for their lessons. I did get a pretty good program from one, and on the Mac, I have Morse Mania, which I like. Mostly, I've been doing it on my own. Fortunately, I'm just about there, I only have a one or two letters that I get hung up on. I expect to be ready in another month, or less.

One of the examiners told me about a test where the person taking the test held a finger against the speaker cone to read the Morse code by feeling the vibrations. My hat is off to that person.

Dear Drink

I started out on HF only 5 months ago, but it wasn't until last month that I threw myself on CW. In Belgium, as in most countries I guess, you have to do the CW test with a straight keyer. But I bought an iambic keyer, the Bencher like displayed on my website. I must say I bought it second hand for about 80US$, which is a good price because it had 0 qso's on the counter!
Just to say: an iambic keyer combined with an electronic keyer device (most modern rigs do have one on board) is what you need to get started. For me, the hardest part is still copying, not sending!
And it keeps you from sending what I call "ugly code"; for an inexperienced CW operator like I am, sometimes a bad " f " sounds like " i n " - well, not that a paddle prevents you from this, but it's harder to do so I think.

Greetings, ON4CLN - Franki

Whatever you get, practice off the air. Tape it, listen to it, and learn
from it.

I personally think a straight key is quite appropriate for the beginner
and user up to about 20 wpm.

4002. 1.8 KHz filter and TS-850

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-21 15:35:45 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <3ab8cca8$1$vtanpl$mr2ice@news.uga.edu>
Source record: 62774

I installed a 1.8 KHz 8.8 MHz optional filter in TS-850S. In USB, this filter is too high but PBT can bring it down. On LSB, the filter also cuts too high, but PBT (Low Cut) cannot lower it. I tried to extend the range of the lower cut by adjusting the pot in the top right corner, but it is already at the extreme position. As an interim solution, I shifted the built-in filter so that it cuts lower on LSB than USB but now my SSB signal sounds differently on USB and LSB.

Does anybody know a smart solution to this problem? The problem seems to be universal because a narrow SSB filter will not sound right without adjustments when carrier insertion point is optimized for the main (wider) filter.

I agree. I always felt that starting with a straight key is a good thing, much like learning to drive with a standard transmission before learning an automatic. The advantage being that you can revert later, if necessary. If you learn using a keyer, it's unlikely that you will pick up the straight key skill later.

Dwight,

Don't let those old grumps bother you at all. Actually, I have seen more griping on the newsgroups than on the air. It is just a part of human nature that *some* people cannot accept change. Even my dear old Dad lives for and like 1950. If the phone rings, it MUST be answered! Nevermind that we have an answering machine to screen calls--if the phone rings, he will almost break his neck to get to it. I keep the ringers off so he won't hurt himself charging thru the house like a mad bull. If he goes outside, he MUST wear a hat--one of those old 1940's homburgs. And so on. I'm not making fun of him, just using him for an example. Whether we notice it or not, we are just like him. Some of us wear our hair long and over our ears because that's the way we did it in 1970. And other generations wear their hair (men) in a pony tail-bald on top but a long tail at the back--because that's how it was when *they* were young. It is a part of our struggle to prevent our youth from slipping away--we want ourselves and our environment to be as it was in our youth.

Likewise, hams *sometimes* try to hang onto to their youth and the way *it* was when they were first licensed. Therefore, if it is different, if "them" dadburned whippersnappers don't do it the way *I* did it, then they AIN'T real hams.

Still, I don't think you will run into the opposition on-air as you do in this forum. Just ignore 'em!

This post mis-represents the official position of the QCWA.
In fact, QCWA supported the introduction of the no code tech license
and supports the elimination of the incentive licensing program.

I have for auction a Standard C5718 2/440 mobile radio. It contains the upgraded memory module to give you 200 channels total. Includes the power cord and instruction manual. This radio has been modified and has the latest updates from Matt Adrian who is an authorized repair center for Standard radio. Standard radios are one of the best built amateur radios and unfortunately are no longer sold here in the states.

I have severe tininnitus (ringing) which is around equivalent of 6-8kHz tone @SPL +8dB. Years of working around blaring studio monitors and loud enviornments have knocked out the high frequency response of my ears. Everything sounds like a muddy AM broadcast. And they wonder why I can't learn code? It blends right into the ringing. Five minutes trying to hear code and I've got such ear strain that I'll actually get a migraine. I also get frequent ear infections which have required me to have drain tubes in both ears for the last 15 years.

> I can tell
you with certainty that this happens and it has nothing to
> do with attitude.

I know... at 38, my doctor says I'm in about as good of condition as an 80 year old. I've been on sickleave on and off for a good majority of the last two years. I work in a car factory since all the consolidation in broadcasting made radio engineering a less than desirable position. Low seniority=worst jobs. We run 75 cars an hour and there's not enough time to spit between cars and it literally has ripped my body apart.

> Wait until every day you endure pain without end that
> interferes with your sleep. Ever hear of sleep deprivation?
> Until you've been there, you haven't a clue. Attitude has
> nothing to do with this.

I have an unknown problem in my back that keeps causing ribs to break free from the spine. MRI's and Nuke scans can't find what's wrong. The pain level is 7-9 ALL THE TIME. The cartilage around my ribs and spine are so messed up that it hasn't healed for over two years. The nerves around my spine are all inflamed.Sometimes I can't take it and have to go to the ER. The hospital attending will occasionally give me Vicodin (like they help or something) but my doctors will not. They're too scared that the FBI and DEA are going to bust their door down at 4AM for prescribing sched 2 pain meds. Change doctors? Been there, done that... they're ALL that way around here because of years of "drug seeking" GM patients. So, I'm no stranger to sleep deprivation. Even have a hard time sleeping with klonopin and ativan.

> Wait until nearly all of your family and friends are
> deceased, the culture is speaking a foreign language and
> even the damned television doesn't make any sense. This WILL
> affect your attitude.

The only survivng kin are my brother (he's having bad heart problems and I don't expect him to be around much more than a couple more years) and sisters (thet're both over 50) and one aunt. Most of my friends are either dead or lost. You can't hardly trust anyone enough nowdays to befriend them as most people today would rip off their own mother. Culture and society as a whole make me ill anymore. The world is a big "market" and we're merely "demographics". And I HATE TV...

I'm so fed up with pain and suffering (mine and others'), being ridiculed for not being "rich" and being expected to just pull large amounts of money out of thin air that I've been in treatment for depression for over two years now. Has it affected my attitude? YES! I keep trying new antidepressants every so often and none of them ever help because none of them can change the surrounding mess we call the world. I feel like half the person I was five years ago and they wonder why I often have suicidal thoughts!

> Whatever happened to looking out for children and old

> heart every word that a child says in anger? Of course not.
> The same tempering should be used for some older
> individuals. Give them the benefit of the doubt. It doesn't
> cost a thing.

The problem is society cares about ONE thing: MONEY! The prevailing attitude today is 'if it doesn't line my pocket, screw it". Anything else is "inconvenient" and "too time consuming". GREED. It makes my blood boil to be around greedy types for just five minutes. I come from an upbringing where we did the best with what we had and the WASTE and VANITY of people today just blows my mind.

> With any luck at all, most of us will reach the age when our
> presence of mind and our body will not function properly. I
> hope when that happens that you will find yourself among
> compassionate people.

I'm getting there fast. I know I won't be around "compassionate" people as they are just too few and far between.

> I'm not speaking directly to you, Johnny, but to all of the
> readers of this newsgroup. If the shoe fits, wear it. If
> not, just nod and move along without taking offense.

I just don't take offense much anymore as it doesn't do any good anyway. My point is, there are people my age who aren't in any better shape than someone much older, so age isn't the main factor here. I have to accept that the world, my friends, my body, etc., has changed. As much as I'd like to

have it otherwise, as much as I hate it, I can't stop it. It would be the ultimate in futility to try. Some people can't accept change and think that if they fight it hard enough, it'll go away and all will stay the way it is. I't called "sticking their head in the sand and blowing hot air out their rear".

As bad as code is anyway, I have physiological barriers to passing the code test. This has kept me from getting a license for years. HF is the only thing in amateur radio that I feel would justify having a license. But do I want to punish myself trying to learn code just to pass a 5wpm test for novice? Hell no! I'd NEVER use code, so I'd have a little piece of paper. I'd NEVER pass 10 - 13wpm with my hearing, so what's the point? I don't have any need for a Tech ticket as I already have GMRS from my engineering business. I paid for that license and the radios and I will continue to use it when I need it. I always heard how Ham radio catered to the handicapped, which it has. Except for my case. I'm not really considered to be "handicapped so I get "can't hear good enough to learn code? Too bad! Learn it visually. Well, my eye's aren't too far behind my ears where problems are concerned.

So, I guess I can just forget a Ham ticket until the ARRL decides to let the old CW requirement fall by the wayside.Then if I'm not a "good enough" ham because I got a license without a code test in the opinion of the "old timers", well too bad. Three options for you Old Timers: Accept it, quit Ham radio because it's pissed you off. or do as you are now and act like a 65 year old kid about it. If you choose the latter, fine! I just don't have to worry about you. It's like arguing" I have to pay $30k for a hardly decent new car today, while YOU OLD TIMERS only had to pay $3k in 1965 and it was built of metal not plastic... it's all *your* fault that it costs more today, so I'm not going to drive because of it".

I suffer from severe tinninitus as well... 6-8k @ an equivalent SPL of
+8dB... I've tried that idea before and it just didn't help. My mind is so
well trained to ignore it that it just plain disregards any steady state
tone. Also, using tone generators all the time in radio engineering has only
magnified that situation.

>
> Circumstances alter cases and yours is one I am surprised some of the
> locals have not at least tried to help you with.

The attitude in my area is "that's too bad... wait until the ARRL does away
with code requirements in about 10 years!" Granted, in the city I'm near,
there aren't many "nice" hams around here and they have become nothing but
"cliques" fighting amongst each other for the last decade or so. Wars over
clubs. Wars over channels and frequencies for repeaters. Wars over CTCSS
tones and whether or not to use them. I've heard it all on the local
repeaters. I've heard fights on the 2M that rival anything I ever heard on
11 meters.

I've even heard fights and attitudes on the weather net from the spotters and net control during severe weather. Next to the code issue, that's the one thing that's always put the final nails in the Ham radio ticket goal for me. I have no use for a Tech ticket. I have a GMRS license, so I can do what I need to on UHF without all the arguements and attitudes. It's just not productive to go through the disappointment of yet another code test for a Novice ticket when I'd never use it. As for trying to get to 13wpm for HF privs, it'll never happen. So, until the code tests are relinquished, no ticket for me.

This is not true. The PAR filters notch out the pagers that are responsible for 99% of the intermod- and let ALL else pass.

Uh, Johnny, not to be ugly, but you don't get out much?? You missed a couple facts and changes.

(1) ARRL does NOT determine whether Morse is a requisite for Amateur licensing.

(2) The Morse requirement is now part of an international agreement that *most* nations have signed. Licensing requirements for all spectrum use is determined by the Federal Communications Commission within the USA. Since the USA is signatory to the inter-NATION-al agreement, the Morse requirement will remain until it is changed further or deleted at the next "treaty" conference in 2003.

(3) There IS no 13 WPM requirement anymore. That was reduced to 5 WPM for access to ALL amateur classes and the respective HF bands. Most of us, except for the stoop-shouldered, "old" grinches who can't stand change, accept the fact that Morse will be removed as a REQUIREMENT within this decade. OK, let's move on and forget it. One thing is sure in this life, and that surety IS change!

With those things said, let me comment on a few more points. One is, I rarely see or hear the "Old Buzzard" types around here, nor do I hear them pontificating on the local repeaters. In 12 years of being a ham, I only had 2 run-ins with one of the "you-better-do-it-the-way-I-do-it-or-else genre. I straightened him out VERY quickly, and I haven't had any more trouble. In these parts, new hams are welcomed and encouraged. If they make errors or "slang" faux pas, they are gently corrected off-air, and we find that people make an effort to fit in. No problem there. You'll usually hear one of the "older" hams say, "No problem, man, it wasn't so long ago that I was taking my first test and making boo-boos. You'll be sounding like an old pro in no time". Or something to that effect. Most of the "Old Buzzard" stuff, I see on the forums instead of on the radio.

(4) There is no Novice ticket anymore except those who held this license prior to April last. They can renew if they so choose.

You should remember this: Using myself as an example, I did not obtain my license to please anyone but me. In order to be, at least, somewhat accepted, I conformed to the normal operating practices/procedures of the other hams I heard on the air. Beyond that, my goal was to obtain access to HF, be able to legally talk with my contemporaries in other lands, and to LEARN more about electronics, radio communications, and build projects to see them work. I spend as much, or more time, making radio-related stuff as I do talking. Thusly, I don't usually hear the

junk that goes on on 3895, 3950, or 14.313. I mostly read about it here. I do not have any interest in childish antics or infantile behavior, and those who have not developed the maturity to hold an intelligent QSO are coldly ignored.

The fact is that there are enough bands, frequencies, and intelligent, helpful hams to be found that I can seek out those of like mind as myself and hold interesting QSOs without being bothered by ignorant buffoons. Or I can build a project that my on and off-air connections in the hobby taught me to do and have just as much satisfaction, likely more, as I can endlessly yakking on the radio about nothing. People often assign to the Amateur hobby only one aspect: talking on a radio, when, in fact, Amateur Radio is MUCH more than that.

Lastly, the buffoons are a very small minority, and, in order to obtain all the things I came into the hobby to achieve, I am not about to allow a few curmudgeons to prevent me from doing what I enjoy. One should approach Amateur Radio in this way; achieving the goals one sets for himself and not allowing any group to discourage him. If one allows self-appointed critics to prevent him from reaching attractive goals, then the fault is found in the mirror.

4026. anyone make soudcardpacket cable for vx-5r?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-21 23:39:16 UTC
From: nodemgr <nodemgr@netscape.net>
Message-ID: <3AB93B7E.2050608@netscape.net>
Source record: 62703

Hello everyone. I am trying to make soundcardpacket work with my newly acquired Yaesu VX-5R. I made the circuit/cables as described at http://www.qsl.net/soundcardpacket/ and I can receive fine but I can't get my radio to key up. I do have the 4 conductor mic plug needed. I can hear the transmission over my second sound card output so I know the audio is there. I am pretty sure it is a problem with the PTT circuit.

I have 100:1 attenuation on the output of the soundcard. I have a 10uF cap in series with the mic line and I have a 2kohm resistor in series with the PTT switch circuit.

I have the PTT line going to DB9 pin 7 labeled as RTS in the circuit diagram on the webpage above. Could this be the problem? Any ideas?

I am using AGWPE and AGWTERM.

Thanks,
Jeff KB9LZS

4027. Standard C510A Dual Band HT 4 Sale.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-21 23:39:51 UTC
From: rbird2@peoplepc.com
Message-ID: <3ab93bb5.4344010@trialnews.peoplepc.com>
Source record: 62702

I have a Standard C510A dual band (144/440) hand-held for sale. Here are a few of the C510A features:

- Direct entry, back lit keypad
- 1W out (300mW low power)
- Frequency Coverage: Tx 144-148 MHz 438-450 MHz Rx 100-180 MHz 340-480 MHz 720-950 MHz
- Vest pocket size (2-1/4" W, 4" L, 1" D)
- Penlight powered! (3-AA batteries)
- Battery save: 3 steps
- 200 memories + VFO and Call
- CTCSS 39 tones-Encode/Decode
- 28 menu selections
- RF squelch - 6 settings
- Freq. steps, 5, 10, 12.5, 15, 20, 25, 30 and 50
- Scan modes: Busy, Pause or Hold; Scans 1 MHz, Entire band, Program, Memory, Specific memory frequencies, Block and CTCSS Tones
- PTT, Frequency and keyboard lock
- 1750 tone burst
- Auto power off: programmable
- Weight: approx. 5 oz without batteries
- AM programmable for aircraft

Expanded TX for CAP-MARS

Asking $150.00 which includes the C510A soft case and shipping within the continental United States.

Please do not reply to this group, send email to: rbird2@peoplepc.com

Thank you,

Congrats on the new ticket!

I'm surprised no one has mentioned the Yaesu FT-530. It came out around '94 or so. Got one when I got my first ticket in '95. Great radio! They don't make them anymore, but you'd be hard pressed to find a dual bander with more bang for the buck.

I also have the Kenwood TH-D7 APRS ht and with all the stuff it does, my fave is still the 530.

Check it out and good luck!

You may have boogered up something on the board when you did the mod. Also, that ribbon cable is VERY susceptible to breakage. I know... mine is cracked now and parts of the radio don't work right anymore. I can still use it at least. You may have to send it back to Yaesu. My 530 lost it's mind when the cpu went bad. Yaesu had it back to me in a couple of weeks. Their service dept. is excellent! Mine will be going back there soon.

73 & good luck.

I am having a strange problem.

I have a FT-530 that I have modified a number of years ago, and it has always worked perfectly. I put it away for about a year and when I went to use it again, the display was garbled (I assume the lithium battery had died). I reset the radio and it is working normally again, but without the mod.

I have tried everything I can think of. I have reset the radio a number of times, then, holding the up and down arrows while turning on the radio but the mod will not reactivate!

How can I get expanded receive back again? This radio is worthless to me in its current condition.

I also got mine free with the radio. In a word... great! Fantastic audio. Much better than the stock mic. You only need to run the mic gain at about 1.

The cord is a bit short and the PTT button isn't really in the right place on the cord for my tastes, but your mileage may vary.

The real question is this... If I had to pay for one would I? Based on my experience with the freebie... yes. I also own a Gold Line that I use on my 746. Bob Heil is a great guy to do business with. He owns the company and he reads and replies to the email. You can even talk to the guy on the radio. The support and customer service is second to none. I'll be talking to him at Dayton about the hi-z Gold Line for my old Swan tube rig.

Hope that helps.

Part of this I can agree with, and part I must disagree with. Learning Morse code is actually a fair price to have to pay; not because I had to pay it or because anyone else had to pay it. It is a fair price to pay because that is what is required (at least for now). That may change in the near future. You can't go to Wal-Mart and say, "I think the price for this doohickey is too high, and that isn't fair. You need to give it me for less." When you go to Wal-Mart and see something you want, you either dig through the pocket lint to find enough money to get it, or you tell yourself it's too high a price and wait for them Rollback the price. Either that or you try to steal it and get nailed by the little old lady at the door. You can stand there and gripe at them for their outrageous asking price until your face turns four shades of blue and your head falls off. It doesn't matter. You don't get to set the price. They do. So, you just have to decide what you willing to pay. The very same principle holds true for amateur radio.
I'm not advocating one side over the other. Personally, I paid the asking price at the time. I started out as a no-code tech, but I sat down and studied the code and passed it, albeit at only 5wpm. I know there are those out there who say I am no more of a ham than they consider the no-code tech (it makes no difference that I was in the process of studying 13wpm when the current restructuring went into effect). I have a very dear friend who moved about 100 miles away making contact via 2m quite complicated I keep hounding him to upgrade, but he just won't do it. He plans to wait until they drop the code requirement completely, and that is his right. The price right now is too high. That's his decidsion. You have to make yours.

The above is just an opinion, and do you know what they say about opinions? They are like @ssholes. Everyone has one and they usually stink.

I'd vote for the trunk. Under the seat it will get kicked, blocked by
whatever finds its way under the seat, and maybe wet in the winter. Harder
to get to as well, and you'll need to get to it. I do anyhow, seems like I'm
taking it out every other month for this or that reason.

As of 15 April 2000 the maximum and minimum speed for all amateur licenses
is 5 wpm. The Novice is no longer available but will be renewed.

I would suggest you get in touch with the ARRL for no better reason than
they are a central point for information on things done to help people in
positions similar to yours.

Given the local clubs, it wouldn't surprise me if the sane one's claim a
QTH in the next town.

Steve I mounted my 706mkII under the seat because 1) my van didn't
have a trunk (duuh) and 2) under the seat is the safest spot incase
of a wreck.

Not a good analogy. Wal-Mart is engaged in a relatively free market
with lots of competitors. If one doesn't like the price asked by
Wal-Mart, one can go to any number of competitors. If one doesn't
like the price asked by the FCC, what competitor can one go to?
Again, if one is to obtain amateur radio privileges, one is forced
to pay the price set by the FCC which holds a monopoly.

Ummm... no, I didn't know about the code req being dropped to 5. And as of late, I really *don't* get out much. I guess now I understand why there is so much turmoil.

Maybe a lot of my trouble are with the newsgroups. I tend to get flamed and insulted over simple statements and questions and then have to be on the defensive. I guess I'd be better off to just quit reading them as they seem to attract a lot more pricks than decent people. Seems like I can't go onto any group anymore without filling up a killfile. It's not like it was in 1992 and I guess maybe the whole internet just isn't worth the time anymore.

Maybe living in an auto town seems to be the reasons that there's so much crap on the repeaters. It's all as bad as 11 meters except for the absence of skip and AM noise. There's a lot of assholes around here anyways. It must be time to start thinking about a smaller town up north or out west somewhere.

So what? If you want it, pay the price. If not, don't. There's no other
hobby I know of which provides so many rewards for such a small investment.

Obtain a business license, driver license, hunting license, fishing
license, etc. These are all "monopoly" controlled. If you want one, you pay
the price (and they are a lot costlier than that of a ham ticket).

I agree and disagree with parts of it also, JW. As for my specific case, CW has never interested me, nor has HF. In other words, I'm pretty happy with what I have. Perhaps one day I'll make the effort to learn code (if I can every get away from the long list of other things that seem to eat up all my free time). In the meantime, I don't waste much time worrying about it.

Yep. Also, it's a damn shame the Department of Transportation holds a monopoly on traffic regulations in this country, 'cause I'd like to switch to one that'll allow me unlimited speed on highways, as well as the right to drive the wrong way in a one-way street while drunk like a skunk.

Additionally, it is market forces that set the price that
Wal-Mart uses...it is not just an executive decision to
charge $Xand the hell with the consumer. If X is too
high, WalMart goes chapter 11.

>If one doesn't
>like the price asked by the FCC, what competitor can one go to?
>Again, if one is to obtain amateur radio privileges, one is forced

And the "price" set by the FCC is not based on any
competitive concerns.

As long as the "price" set by the FCC is rational you'll get no
argument from me. If the state you live in set a driver's license
price of $1000, would you just pay that or would you join the
voice of public discontent and demand rational fees.

Cheers,
Bill K2UNK

4062. Variable Capacitor

Newsgroup: rec.radio.amateur.equipment

Yep, that's exactly what I said. In return for certain privileges granted,
the government forces citizens to meet certain requirements. That's what
governments do.

4067. Re: Dual band HT for newbie Technician?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-22 17:00:01 UTC
From: Todd Pearson <Todd_Pearson@hotmail.com>
Message-ID: <faqu6.28$bO1.11832@news.pacbell.net>
Source record: 62744

Hey Monte, welcome to the world of Ham Radio. You'll be happy that you got your ticket!!!

Let me suggest to you the Yaesu FT-50, which is the first radio that I got when I got my license back in 96. I own 2 of them to this day. GREAT radio, very rugged, with lots of capibilities. The price has fallen on this to around $249 new, but you can find them for less on these newsgroups, 2wayradioauction.com and Ebay. You won't be disappointed with such a great radio. Not only can you TX on 2m & 70cm, but you also have yourself a great little scanner, as it RX from I believe 50-999Mhz. Mine have full blown mods, so it alters the TX & RX range capbilities of the radio. But, let me tell you, I would trade this one in for any other HT out there.....well at least for right now.

Good luck and enjoy talking on the airwaves.

Speaking of which, if Silicon Valley is near San Francisco, does that mean that
Germanium Valley is 0.5 miles lower?

4073. Re: IS Ham Radio Dying? (Was Newark Store)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-22 18:33:08 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3ABA4564.87C@bellsouth.net>
Source record: 62649

Dick,

I didn't say I *didn't* wear a hat. It's more likely to be a ball cap, tho! Aw, you mean all that hair on my head is no protection? LOL!

I was referring more to the fact that we tend to hang onto things as they were when we were young. We often don't realize we are doing it, and the reason we cling to these "old" habits is, I think, our reluctance to accept change and to change with the times. I just used Dad as an example. He is very reluctant to accept new things or to use certain modern conveniences. He would rather type on a 1949 Royal typewriter than to use a computer or a word processor, spending much effort with an eraser or white-out to correct mistakes because that's the way he did it in 1950. He would rather wear a homberg or fedora than a ballcap--not because it protects his head, but because it was the style in the 1940s. He believes the phone MUST be answered even if it means being interrupted during dinner by a telemarketer. Again, I'm not making fun, just pointing out that older men become "sot" in their ways, and if it wasn't around in their youth, it's not a valid way of doing things. Of course, not all older folks do this, but a majority do. And this tendency carries over to Amateur Radio. If a newer applicant does not obtain his license the same way "I" did in 1955, then he/she is not a "real" ham. If he doesn't revere the "holy grail" of CW the same way "I" do, Harumph! The Old Buzzard types flap their sagging wattles, and pronounce gloom and doom over the would be ham, declaring same to be a "lesser" genre because that whippersnapper didn't do it the 1950 way!

OK, I got my Novice/Tech in 1989 before the no-code issue. I admit that I am glad I had to do it that way. I did the 13 for General and sweated late at night studying for the Advanced. SO? It's a different era, it's a new day. GET OVER IT, GUYS! Instead of whining and harumphing because it's no longer 1955, let's encourage the new people. So what if they aren't interested in CW. Some of those who aren't interested in CW just don't know it yet, and if we help them with what they are interested in NOW, who knows what their natural curiosity will cause them to want to do later. If Ham Radio were to die, it would be our own fault. Our fault if we try to keep it an exclusive "club" where no one can "intrude". Our fault if we keep telling the new folks how they "aren't" 'real' hams!

So, fellas, keep wearing your frumpy fedoras, keep combing hair from WAY down the back of your heads thinking you're hiding your baldness. Just STOP disenfranchising the newcomers. We need them more than they need US, and just as they can tell if you've got hair or not (FLASH! you ain't foolin' nobody!)they can see through all this posturing and

Old Buzzard crap. The newbies , code or no code, are the key to keeping
the hobby alive.

Nope, we're doing our best to establish that in order to gain certain
privileges (amateur radio privileges, driving privileges, flying
privileges, etc.) a citizen is forced to meet the requirements
dictated by the government.

There is more to crystal frequency than just the number printed on the crystal can. First, are both radios using the same "fundamental" frequencies? If they are not, changing one will leave you dangerously off frequency and may damage the radio. Second,. will the 161 ,Hz radio require realignment to work properly at 144 mHz? That is a long way to shift frequency! I would recommend you take the radio you want to recrystal to a real repair shop and have it done there!

Murray, I have seen one of the factory kits from Kenwood for this mod. It is intensive to say the least. A very complicated and time consuming mod.
I doubt you could replicate the parts list easily. I post to the list since others
may be thinking the same thing. Of course for the talented bench guy it can be done but it is not a small project in my book. 73 es GL Mike K0AZ

That is a "Jan. 2001" unit. Let us know of any problems.
(e.g.: noisy MW & FM)
I'm still looking for a good one myself.

I bought one and had a serial number very very close to yours.

It was nothing but trouble...lots of problems..noise on MW..etc.etc.

what a nightmare.

John - That's bad news. The quality problems were supposed to have been resolved in November.

Seems like some people have found good units. Just not me.

Bummer. I still want one.

Mike

4092. SBE collectors, un-marketed amplifier!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-23 01:02:46 UTC
From: Mike <wb6vse@ipa.net>
Message-ID: <Kdxu6.80$lt6.172745@nntp3.onemain.com>
Source record: 62668

I am forced to get rid of the only existing 2KW SBE amplifier. This was developed in our engineering department in the mid 70's. It is almost identical to the Heath SB-220. They even used a Heath assembly manual and Henry schematics to construct it. The only difference I am aware of is the ALC circuits. They were designed to work with another un-marketed model, the SB-35. The tuned input coils are slightly smaller than the 220. There is one coil burned by excessive RF from my SB-36. (500 watts) I prefer local pick up, or close by with this unit, as it weighs close to 60 lbs. No tubes included, and I will provide the replacement Heath input coils. Just haven't the time to replace them, and my Henry is running just fine.

Price will be $750.00. If no takers, will list it you know where!
Thanks
Mike/K5VSE

Brand new, never used, separation kit for FT-900 transceiver. With this kit you can mount the front plate of the FT-900 on or near the dash of your compact car and mount the main body of the unit in the trunk, out of the way and safe. This kit has all of the mounting hardware and the special interconnect cable. It has never been used and is its original plastic packaging. Price is $45 Firm, no trades.

I really wanted to stay out this but ole weird Roger is in so many newsgroups and he is the type of guy that everyone would love (to put duct tape over his mouth). But I find myself wanting to show him what I was told about libel laws.

Libel is proven in a court of law when the words, spoken, uttered, written, and or published which caused the libeled to be embarrassed to the point of duress. Do you think Roger has reached that point?

Some one near Roger's city should try to find out if Roger, cross dressing as a person, and the gall of imitating as an Amateur Radio Operator, has a job. (I doubt it.)

Someone should find out if the EM99 in his signature is related to Emergency Management or the local police identifier number for one weird mental impaired first class nut.

Why. Because if someone could find this information out I am sure the employer would not keep him around and certainly not the Emergency Management Agency of "it's" county!

Times getting short Roger. Repent your wicked ways my son. The end is coming sooner then you think. (my son! If you were my son you would not be on the internet you would be sitting in the hospital recovering from having fallen into the computer monitor.)

But these people would argue that the "price" set by the FCC (the code testing requirement) is not rational - it is not rational to still maintain testing for morse code when all other radio services have long ago dropped a similar requirement, or when code has been virtually eliminated in all other radio communitions (commercial, military, governement, marine, and so forth).

The code test requirement once served a purpose - to provide a means of code education for those who might enter other radio services and to provide a pool of trained operators to serve as a backup for other radio services during emergencies. Those purposes no longer exist today - the other radio services don't need people educated in code and CW is a very poor backup for cellular telephones, satellites, and electronic mail.

I have an Icom AT500 autotuner for sale/swap. I must move to apartment requiring an inside intenna that will need a wider range tuner to match. The tuner is in good condition with few scrathes on top cover. I have used it manually with Yaesu rig and it tunes great. Have not tried interface to Icom rig since I don't have one. I have manual and interface cable.

I would consider a trade/cash deal for a 1Kw manual tuner (NO MFJ PLEASE).

Thanks

Just got one of these HTs. I'm currently charging the batteries for the first time. The only thing the instructions say, in regard to the standard BP-194 battery pack, is "the charging period should be less than 48 hours."

How long should I charge these little buggers? Up to 48 hours? That seems like an awfully long time...

Thanks,

Bob

Source record: 62677

Thanks for the comments, and I would like to thank all others that replied also.
I think I figured out what happened, gonna explore it further. the unit was bought used, and the last owner did the 10 meter mod. There is an extra capacitor in the 160 tank circuit, not on the schematics, seems to be there to add capacitance, possibly that which was lost from doing the mod. The cap is labeled 47j, 3Kv, and looks split in half, like it popped. All other components look intact, so hopefully just removing it will solve the problem, I think it is now shorted to ground, and thus no dip and no power out on 160. Still not sure why the idle current is zero, but that looks like it is controlled by a 7.5 volt zener diode, which appears to be intact, the previous owner might have changed it or something, and it might be something different. The schematic says 7.5volts, and I cant tell what the part actually is, so more thinking needed here.
Any other thoughts welcome, and I am not familiar with the labeling on the cap, is 47j the same as 47 microfarads?
thanks,
William F. Hagen

Murray,

I installed the "kit" in a TS-180 many years ago. It is as the others describe. A bunch of small parts but not unreasonable. The main problem was I could never get any of the bands to work and Kenwood was no help at all. I wouldn't waste my time. When I finally sold the 180 that I bought new after about 18 years the main problem was a drift it had acquired.

NOTE! Please email me first to be sure I have antennas still available.
I can also provide a 10 ft. jumper with BNC connectors at each end for
$6.00 extra for a total of $61.00. Thanks!

a reference from one of my customers!!
(Thanks Robert, I received the antenna, it was as I expected and works
great with my Garmin GPS-III+. Don't hesitate to use me as a reference.
73 de AC7KE)

I have for sale, once again, a bunch of these real neat GPS antennas. I
had 12 units that sold out in a few weeks last year. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPS-1, GPSII+, GPS III plus etc.
units that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Payment via PayPal or USPS Money Order or Western Union money
orders.
Money orders and will ship in a few days, if you do send a personal
checks I will ship when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Gary

Try Brad at Keycom, http://unite.com.au/~ue367/index.html if they have the eprom boards I think he does them for around $20 an eprom board.

If he wants to sell one of them let me know

Amateur radio covers a wide spectrum of methods and modes. Some people specialize in SSB, others AM, still others TV, low power, EME, and yes some CW.

Qualification for an amateur radio license covers that same spectrum. We are tested on the Rules and Regulations governing the service. We are tested on our understanding of proper and appropriate operating technique. We are tested on how a radio signal is generated and detected. We are also tested on modes of operation i.e. ssb, am sstv, atv, antenna design and operation. And. We are tested on our comprehension of digital modes of communication to include morse code. To say that we should not be tested on a segment of the service just because it is old, outmoded and not used for anything ignores the fact that code is part of our general knowledge and an important part of our heritage.
I, personally, have a tin ear with some hearing damage due to loud noise encountered during my working career. I passed the 5 wpm code test for Novice/Tech Plus Plus many years ago. As a novice I made a number of CW contacts poorly. I upgraded to Tech and remained such until last year when I was able to upgrade to Extra. No I am not a fully qualified Extra as defined by some but I did work to learn that which was required by the FCC to qualify for the license. I also learned more than that which is required. This is the price I paid for my chosen hobby. I have also used my knowledge so gained over the years as a communicator in Civil Defense, Civil Air Patrol, various places of employment for a total of atleast seven radio services. All of this because I took the time and effort to learn the code. I have not, to date, used my morse code knowledge for anything other than to take the test but I am glad that I do know it.

Let me say in closing that the comments of Dwight Stewart, while contrary to what I believe, are just a valid as mine and, who knows, may be right. I have noticed some comments in this thread that are mean spirited and meant to agitate not convey rational argument. So, by all means lets continue the dialogue but lets keep it civil.

4111. FS: Icom IC-W31 Dual Band HT Package!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-23 06:15:38 UTC
From: foxblaine@aol.com
Message-ID: <20010323011538.28057.00000770@ng-mi1.aol.com>
Source record: 62685

Greetings!

Up for SALE now is a most excellent dual band (2m/440) handheld transceiver, the Icom IC-W31. Included with the HT are 3 good working batteries (though I cannot gaurantee batteries...they are working good and holding a good charge at this time.) Two of the batteries are BP-173's (9.6v 650mAh), and the other is a BP-171 (4.8v 700mAh) battery. Also includes Icom leather case, AC trickle charger, speaker mike with independent volume control on the mic (Nifty feature, but I have to be honest, the clip on the mic is broken -- easy fix for you to do if I don't do it first!), as well as original box and manual. AWESOME package with WIDEBAND receive! First $295 via PayPal gets it shipped to their door via USPS Priority 2 day mail! Priced to move quick!

Well, at least you passed the test, which adds a lot of validity to your opinion, pro or con CW. I personally find it hard to validate the opinions of those who condemn what they have never achieved.

In a trial, there is a thing called an expert witness. This person is allowed to enter their personal opinion on a subject as evidence because of their experience and expertise in the field of questioning. However, a common layman's personal opinion is disallowed due to lack of expertise on the subject.

Amen. It is obsolete, totally irrational, and part of the very definition
of an Amateur in the treaty and will be for the next five years or so.
Anything over 12 always was ridiculous.

Given that, what are you going to do about it? You could pass it, you
could simply shut up and wait, you could send out for a pastrami on white

with mayo, have sex, or expect rain. There are any number of wondrous things to be accomplished.

So for why are we treated to the self-serving observations on the obvious? Why not try to sell someone who matters? We are just a bunch of people who cared enough to DO it and know bullshit when we see it. I don't care if you pass it or not but please do not insult my intelligence.

Not really, it's 47pF, and make sure you use one with the same or higher voltage rating. As far as having no idle current, it is possible that the previous owner added a bias cutoff circuitry into the amp. That type of gizmo eliminates idling current and thus reduces wasted power and heating of the tubes, since they no longer conduct with no signal applied, but only in key down condition (or when you speak into the microphone, for that matter, but for SSB the operation is a little different). If no such add-on exists in the amp, then your bias is severely reduced which can result in huge distortion. If that 7.5 V Zener (not that critical value, btw) ever shorts, your idling current will shoot up and slam your meter. This is known to happen with certain TL-922's when you switch from SSB to CW mode (on the amp) *and* your line voltage is higher than normal. I've even heard of a case where the meter was blasted off the panel by one such surge.

73 ..... Zoran WA7AA

P.S. If you indeed found out that the bias cutoff circuit has been added, I would rip it out and replace it with a vacuum relay and an opto-coupler/transistor bias control for full QSK.

If this is for the local oscillator, the value of the capacitor will be different depending on whether the IF is above or below the tuned frequency (defining the VFO frequency). Also, is there also a tuned RF stage? Trimmers are usually screwdriver-tuned - is this what you want? And by "wide-range" are you talking about the old 365pf caps such as found in the old broadcast band radios? Or is this maybe a regen receiver? Since you didn't provide any information required to answer the question, I'll make a few assumptions of a 10.7 MHz IF, LO is lower in frequency (32-35 MHz for improved stability) giving you a range requirement (difference between minimum and maximum) of about 17pf. But that's REAL rough.

If you want a better (usable) answer, you have to provide more solid design information. For starters, get the latest ARRL handbook and read it. All your answers are buried in there. There are other good books on receiver design that also would answer your question.

Tony

Hallicrafters S-38D Receiver in good working condition.
This is a silver-gray version of the S-38D (not blond color). Has all
original knobs and a very nice back panel.

It works well, and has a nice-looking original power cord.
Will sell for $55.00 plus shipping

Web Site:

Found this on the ARRL website:
"The code-free Technician ticket in now ten years old. For the first time, starting in February 1991, applicants could obtain an amateur radio license in the U.S. without taking a Morse code examination. The Technician license has proved popular over the years, and Technician and Tech Plus licensees far outnumber other license classes today."
-ARRL
Also I recently saw the survey on the RAC.CA wbesite and the most popular band is 2meters.
just something to ponder.

They are made by Tecsun in China. (IIRC the YB400 is made in China,
too.) Grundig in Germany doesn't seem to build any shortwave receivers
any more.

Overcharging most types of batteries will damage them and shorten
their life significantly. Some chargers will shut down, but tend to be
more expensive.

You can calculate the rough charging time from looking at the amperage
(milliamperage more likely) and dividing into the amp-hour capacity of
the battery pack.

For example, if the battery pack is 2000 milliamp-hours, and the
charger output is 100 milliamps, 20 hours would be a full charge.

Most are sized so that overnight pretty much charges them.

Happy trails,
Gary

Thanks, I finally took a look at the actual battery cells, and they specify 15
hours charging time.

Thanks again,

Bob

Hello,

I have recently purchased a Yaesu FYT-5100 mobile radio from Charles Hugg,
(a very nice person to do business with!). Unfortunately he did not have
the manual and I am looking for any help at all.

Thank you for taking the time to read this post.

That's true and I am one of those that believes the
price (code testing of any sort) is no longer rational.

All true, but you don't consider that none of the other modes
are tested on a separate pass/fail basis as code is today.
I have no problem with adding some test questions to the
overall test/knowledge syllabus on code as a mode. There
is,however, no longer need to test anyone's individual
code ability as a stand-alone skill test on sending/receiving.
That's no different than not testing on ability to type
using a keyboard for packet or RTTY.

>I, personally, have a tin ear with some hearing damage due to loud noise

>do know it.

You are an excellent example of why there is no longer any
need to mandate code skill testing. If and when you ever decide
to use code, you will be relearning much of the skill and ability.

The only "rights" involved are as follows:
1 - Everyone has a right to become a ham as long as they
meet FCC requirements.
2 - Everyone has a right to expect that the FCC requirments
are rational and justified.

>like to get my hands on either the 560 or 1000.

Wayne, how interested are you? I have an FTdx560 with the FTV250 and FTV650B (really for FT101 series...has an interface to handle the difference in switching/heater voltage) transverters. A local ham has been begging me for the FTV650B, and, as I have to face some medical bills (wife), I may have to sell off some of the toys. Unit has good power out up to 20M, weakens on 15 and drops on 10M (I'll check and see exact output this weekend if you have interest). I do have a spare set of finals.

Haven't really thought of selling it until I received some of the bills this weekend <sigh>. If we can avoid any further medical bills, I won't have to sell it....but I'll know early next week. My brother (KA4YKC) will kill me if I sell it, as he just got his General (ex-techplus) and was using it this past weekend. However, he currently has my HW101 which will keep him going for a while.

Cheers;
Andrew

Although I have had and am having a problem with Cushcraft antennas,
Cushcraft has always promptly responded to me via telephone or email and
have always promptly sent me parts that I needed. I would still buy and
plan to buy other Cushcraft products.

>
> Seems that I would have easier access to the unit in the trunk...

Given the choice, I would opt for trunk mounting. I mounted mine under the front passenger seat because I didn't want to get the longer faceplate cable. It works fine, and the cable runs were easier, but it would be much easier in the trunk.

It also doesn't help that the seat adjustment switch on that particular seat no longer moves the seat forward. Haven't been able to get at the radio for months, now...

The same can be said about pregnancy and child birth. If you can't get
pregnant, or give birth to a kid then I guess that person's views on
abortion are not valid either, right?

The argument that if you don't know CW you can't have a valid opinion about
it is crap. I'm sure you can't get pregnant, but I'll bet you still have a
valid opinion about abortion none the less, which is the same argument about
CW, but in a different context.

Just picked up a Sinclair Duplexer, Model R-312CR
that appears to be a "reject" type of setup. Four cans and tunable rods in
the middle. I wanted to use this for a low
power repeater in our area and the tech who sold it to me said it would be
good for up to 50 watts but it really kills the sensitivity of the receiver.
Has anyone had any experience with these duplexers? Any pros or cons?

I am looking for any information pertaining to this duplexer. Thanks!

Anyone replying to me rather than the newsgroup should
remove NADASPAM from the email address.

It's not an argument, Leland, it's a fact. It is only considered an
argument
by those of you who have some reason to ignore the facts.
Only by learning it, gaining skill in how to do it, and working
radiotelegraphy can you come to know the essential facts concerning it
as a working communications mode.
You codefree types would much rather not even consider it to be a
communications mode, and for darn sure you would never bring yourself to
acknowledge that it is truly the most simple, easily implemented mode of
radiocommunication, useful under the most wide range of daunting
circumstances when virtually all other modes in common use are in the
toilet, or not even available due to their heavy overhead amd
infrastructure requirements. Nothing else even comes close.

So don't try to convince us that you will ever be a "Real Ham" ï¿½ until
you, too, are at least minimally qualified as a CW operator. Till that
time you will be an Amateur Radio licensee.

Nevia:
Could you be a little more descript about the duplexer? My sinclair catalog does not list it.

Basically there are two common types of duplexers, the hybrid ring and the pass/reject type.
The hybrid ring as a closed ring phasing harness for each cavity and there are coaxial taps on it to interconnect the rings. The cavities have only one port vs two for the pass-reject type.

Sinclair discontinued the hybrid ring sometime in the mid 80's and no longer supports it
It was too costly to manufacture and provided no out of band attenuation thus requiring additional filtering..

You did not state the dimensions of the cavities. Generally speaking the larger the can, the higher the Q. Most are about 7 inches in diamter and about 26 inches in length.

For two meters and the 600KHz separation at your power level, you need a duplexer with at least 95-100db isolation to avoid desense. To get this sort of separation you need at least a six cavity duplexer of the pass/reject type. The best results that I have ever been able to acheive was 80 db with only four cans It is simply not enough.

The four can hybrid ring variety can get you over 120 db of isolation if properly tuned. The dimensions of the phasing harness are critical and most commercial band duplexers will not work in the two meter band unless of course you manufacture new harnesses for the frequencies you want to work.

Also there are no standardized input to output frequency offsets for the 152-174MHz band and if this duplexer came out of commercial service it may have been setup up for a megahertx or more separation in which case it probably worked well.

>

Actually, the price the FCC sets is based on international treaty. Of course, that treaty will likely change in the next few years by dropping the code requirement, and the FCC will follow suit. Those that want HF priviledges will either pay the price and learn code or they can simply wait a few years until HF priviledges go on 'clearance'.

Hey Fellas,
Thanks for all the good inputs. I got a lot of good ideas and some pointedly differing opinions. I think I came to the right decision.
I ordered a new set of bencher paddles with a fair keyer. Then, I added on a $6 straight key. I figured that tradition and old fashioned keywork was something that shouldn't be ignored (remembering a story told me by a friend who was a communicator in the Army about a guy who, during a qualification exam had to resort to shorting wires to make contact) but recognized that the days of a straight key compete with a new way of doing things. Besides, this way I can learn the basics and be constricted to sending code at a rate I can copy;{)
For my German friend curious about my english skills,
Ich bin ein Amerikanische (HaHa). By the way, I only speak enough German to coax a german tirade.
Thanks to all helping me on this one. It's been a good experience so far.

Nevia:
Could you be a little more descript about the duplexer? My sinclair catalog
does not list it. I assume it is a reslock type which is a pass/reject type. Reslock duplexers were popular for VHF mobile telephone use because of their compact size. I have never seen one successfully used for two meter repeater duplexing.

Basically there are two common types of duplexers, the hybrid ring and the
pass/reject type.
The hybrid ring as a closed ring phasing harness for each cavity and there are
coaxial taps on it to interconnect the rings. The cavities have only one port
vs two for the pass-reject type.

Sinclair discontinued the hybrid ring sometime in the mid 80's and no longer
supports it
It was too costly to manufacture and provided no out of band attenuation thus
requiring additional filtering..

You did not state the dimensions of the cavities. Generally speaking the larger
the can, the higher the Q. Most are about 7 inches in diamter and about 26
inches in length.

For two meters and the 600KHz separation at your power level, you need a duplexer with at least 95-100db isolation to avoid desense. To get this sort of
separation you need at least a six cavity duplexer of the pass/reject type. The
best results that I have ever been able to acheive was 80 db with only four
cans It is simply not enough.

The four can hybrid ring variety can get you over 120 db of isolation at 600KHz if properly tuned. The dimensions of the phasing harness are critical and most
commercial band hybrid ring duplexers will not work in the two meter band unless of course
you manufacture new harnesses for the frequencies you want to work.

Also there are no standardized input to output frequency offsets for the
152-174MHz commercial band and if this duplexer came out of commercial
service it may have
been setup up for a megaHertz or more separation in which case it
probably
worked well for that service.

In tuning a duplexer you should never use transmitter power to do it.
What I do is to use a sensitive receiver with an S-meter and a signal
generator with a calibrated attenuator. I separate the cans and tune
them one at a time and set the pass properties for minimum attenuation
and the reject notch for maximum attenuation using the appropriate
frequecies, of course.

Good luck with it and 73...Dick K7RNZ

Bill;

A comment you made below seems to fit the solution to the problem. If the code test was made part of the scoring of the written test just like the various segments of the present written then those who want to do code can study the code and have a section of the test that they will pass and have other sections that they can slide on and still get their passing grade.

Common sense and basic survival instinct are completely different than
trying to impose your personal opinions to the general public on a subject
in which you have no first hand knowledge or experience.

A perfect example of this is the anti-gun crowd - the vast majority of them
have never even fired a gun, and yet they would have you believe that based
on their feelings and opinions, you should have to give up your guns.

I understand how a nuclear reactor works, but I would never be allowed to
testify in court as to the value of such a device to the general public.
This is because no matter how well intended, the fact remains that my
opinion on the subject is moot due to the fact that I do not possess the
expertise necessary to present a legally valid opinion.

4164. ALINCO on the verge

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-24 02:46:49 UTC
From: chuck@ag.wakwak.com
Message-ID: <99h1qp$k4u$1@news.netmar.com>
Source record: 62641

We all know Alinco radios were of good price performance.
If you are a first timer, Alinco is a good radio to start and try.
If you are an old timer, Alinco still gave you plenty of opportunities as backup.
If the DX-70 was't there IC-767 wouldn't have sharpened to todays level; thus
FT-100, FT-817, etc.
Well guys, Alinco is on the verge of closing down electronics business in a few month, due to poor sales in the last 3 years. True, the company did wrong things in the past few years (like making marine radios, aka throat-cutter business). But most recent Alinco radios (esp after January this year) like DR-135 shows recovery in quality.
I am sending email to Yuusaku Inoue, president, recommending to continue the radio business. edomestic@alinco.co.jp
It would be a pity to see another ham radio manufacturer going away. I know what someone said about Alinco; everything people said is true to one's extent. However, Alinco does have its value.

Ken

Make sure you send the facts to the ARRL concerning this issue. The ARRL should not accept any advertising from them in the future since they no longer seem to be a reputable firm. Second, I suspect that Mosley may be surviving on government contracts (federal). I would suggest that you find out if that is the case. If they do government work, you might want to call your federal congressman and senator and ask or their help. Ask them to get some sort of declaration to keep the government from making any future purchases. Next keep publicizing this issue. The best way you can force them to resolve the issue is to hurt them in right in the wallet. If other hams know what you went through, they may buy from another vendor. If Mosely starts losing business because of your making others aware of their business practices, then they may be more willing to resolve the issue. I'd spend money on ads in ham magazines every month instead of a lawyer. I think if you help send their business into the crapper it would be much more effective. Fight fire with fire. Good Luck.

oh, one more thing. File a suit in your local court if possible. I doubt they will travel and make it easy for you to win the suit. They, send a collection agency after them and have that Missouri attorney they to garnish some of their property to satisfy the claim.

I am forced to get rid of the only existing 2KW SBE amplifier to make room for more goodies.
This amplifier was developed in our engineering department in the mid 70's. It is almost
identical to the Heath SB-220. They used a Heath assembly manual and Henry schematics to construct it.
The only difference I am aware of is the ALC circuits. They were designed to work with another un-marketed
model, the SB-35. The tuned input coils are slightly smaller than the 220. I prefer local pick
up, or close by with this unit, as it weighs close to 60 lbs. I can ship if necessary, and will double box for
safety . No tubes will be included. I can supply jpg if you want. Painted black and light gray. Front panel excellent.
Worked the last time I tried it several years ago . This is the only amplifier in existence. There were three built, and this is
the only one that had a cabinet. There is a serial number plate on the rear apron, with no number, which let's you know it
was never in production. Only a prototype. Collectors look!

Price will be $750.00. If no takers, will list it you know where!
Thanks
Mike/K5VSE

Hi All;
I got a bunch of Audio Amplifier boards with 4 transistors on them.
Has 3-2n3904 and 1-2n3906 with 8 ohm output, run off about 5-12vdc.
The size is about 3" x 4".
The sizes and placement of components may vary a bit from this picture.

http://members.nbci.com/wa2rqy/audioamp.jpg

Use it in your portable qrp rig, built it into something or use with your xtal
radio.
Price is $10ppd.

So all the digital communications experts who don't possess actual
Morse code skill don't know the "essential facts" about Morse code?
If Shannon didn't possess Morse code skill, do you think he didn't
understand the theory? You think the FCC doesn't understand Morse
code? You're still beating that poor old dead horse. Hams who want
to use Morse code use it. Hams who don't want to use Morse code
don't use it. Every ham has a choice of his/her favorite mode(s).

The keyword here is "Hams". As used in your sentence, the implication is
that a person you classify as a "Ham" possesses the skills to use CW if
they choose to do so.

> Every ham has a choice of his/her >favorite mode(s).

Agreed, according to your definition of a "Ham". But what about those
persons who do not possess the skill to operate CW? They do not fit the
definition of a "Ham" as you use it here... because they cannot operate CW
if they wanted to because of lack of skills.

Which is basically what the whole discussion is about... There are some who
may have access to the bands, but since they do not possess the skills
necessary to operate CW, by definition they can't be included in the group
commonly referred to as Hams...

Mr. Duffy,

Don't you find it odd that there aren't dozens of people chiming in
agreeing with him? Where are all the "yeah, they screwed me too"
comments???

I find it unlikely that if a company was this bad only one person
would be spamming them month after month after month. This junk has
been going on for what, a year now?

I don't know who is telling the truth, or if anyone is.

Do you?

I am at my wits end with this problem....please help.

I have a 1988 Toyota Camry that causes interference to my 2 meter radio and scanners. I'm not sure what is causing it because the scanner gets a whining noise even when it operates on its own power and using the rubber duckie. This tells me that it's RFI. The 2 meter radio gets it even worse since its hooked to the cars electrical system. It gets alternator whine and some other kind of RFI interference. I thought it was my older Kenwood mobile but I just upgraded to a newer mobile and still get the interference....maybe even worse. Its so bad that unless I have a S-7 or better signal on you, I can't hear you. It actually cuts the signal out as if someone were keying over them. I hate talking on repeaters so I don't have the luxury of full scale signals. We try to stay on simplex unless its a must to go to the repeater.

I have read several web pages and first things to try is this:
New (better) Plug wires.
Plugs!
Check the Distributor for cracks or abnormal wear.
****

I have already ran power wires straight to the battery.
Tried Ferrite coils on the Power leads and antenna coax.
I read that Toyotas are bad about having a noisy fuel pump?!?! Any experiences?
I know there has to be others with the answer to this problem......please help if you know the answer.

Just why the heck would anybody in his/her right mind pay the ARRL to be a
member? For what?
Who cares?
The ARRL is losing members day in and day out. They have to ask themselves,
"Why?"

The real reason for this loss of members is simple.
1. It costs too much and you get nothing back.
2. The magazine is too full of voting and political agendas.
3. Nobody really cares about the ARRL.
4. The ARRL really doesn't care about you.
5. The ARRL has an agenda that does not help Hams.

I've seen quite a few radio manufacturers go by the wayside
over the years. Most with mediocre equipment that sometimes
filled a specific application perfectly. For example, KDK,
Azden, etc.

It's a shame, but it's the way of the world.

Thanks for the heads-up.

Well, Dick, I've already said what I'm going to do about it directly (since I have no interest in HF right now, I'm going to do nothing). However, in the context of what you said above, I don't like pastrami, so that's out. But I do expect to enjoy the radio capabilities I have, barbeque steaks on the grill, enjoy the coming summer, and hope the rain goes away so I can sit around on my boat and soak up some harmful UV rays. In addition, I intend to address this topic occassionally when it comes up in this newsgroup.

Sorry, I hit the send button before responding to this. Anyway, unless your name is Bill, I wasn't trying to "sell" you on anything. And, since you want to be so huffy about this, let me add that I was also one of those who cared enough to do it - when I was about thirteen in the Boy Scouts. Since then, I grew out of flashing messages with my Boy Scout flashlight and beeping messages to kids on the playground with my little decoder ring. Since then, I learned the best way to communicate is to talk, and I have used my knowledge about radio to improve my station enough to do that effectively without having to resort to an 18th century telegraph key. Perhaps you should learn more about radio so you can do the same. :-)

I used the 5m cable to mount mine in the trunk, along with a deep cycle
battery and a 3 watt solar panel on the back deck. My 800 watt power
inverter will run the computer I'm about to install to run my adaptive
filtering software.

I decided to mount it there due to the passenger requirement ... i.e. I knew
under the seat would lead to it being soaked or covered in snow in the
winter. It's also heaps easier to get to.

No one is getting huffy but I do have a certain difficulty calling a
manure pile a 'fertilizer storage facility'. New does not imply good, old
does not imply bad. All things in context.

The context here is a lot of breast beating self-justification for not
taking the code test. We can talk coulda, shoulda, hafta from now til
Independence Day but the cosmic interplay of choice and chance has made it
a requirement to do 5wpm in the easiest manner possible for at least the
next five years.

What you choose to do about it if anything is purely up to you. You don't have to justify it to me or anyone else. If it is a self-worth issue, it is YOUR self-worth issue. So stop with the justifications already. It is not about the mode, it is not about VHF-UHF vs HF, it is about a code test that is more of an inconvenience than a hurdle for most people. Obfuscation merely irritates.

It is particularly irritating when the audience is composed of people who, for whatever reason and by whatever method, passed a code test. There is a time and place to call golf a stupid game -- the gallery at the Masters is more than likely not that time or place. Preaching the Gospel on the road between Mecca and Medina is not the best context either. So why in hell are you doing it?

Except this is not a court scenario...nor is the FCC arena
when it asks for or otherwise accepts comments on rules.
One need only examine the use and role morse code now plays
in any communications service to see it is significantly
diminished in need. The value of code to an individual
on a personal enjoyment basis is not the rational the
FCC uses in determining value or need.

Additionally, as a counter-point to your court "expert-witness"
scenario, you must admit that in the end, it is the jury
of people that do not possess that expertise that
makes the decision.

By the way, it doesn't take that much effort to be deemed an expert witness in most cases. The opposition will use its crossexamination time to discredit any expert witness...but in the end it goes to the jury for the final choice.

Cheers,
Bill K2UNK

No such implication can be made from that statement.
By current regulations, hams are hams with or without
morse knowledge. That has been so for 10 years.

>> Every ham has a choice of his/her >favorite mode(s).
>
>Agreed, according to your definition of a "Ham". But what about those
>persons who do not possess the skill to operate CW? They do not fit the

Your claim has no basis in what was stated, nor in fact.

>Which is basically what the whole discussion is about... There are some who
>may have access to the bands, but since they do not possess the skills
>necessary to operate CW, by definition they can't be included in the group
>commonly referred to as Hams...

Absolutely false...as already stated above.

Cheers,
Bill K2UNK

I agree. I have never suggested that code,, as a mode, not
be included in the overall knowledge base.

> The keyword here is "Hams". As used in your sentence, the implication is
> that a person you classify as a "Ham" possesses the skills to use CW if
> they choose to do so.

That's not the implication at all. This ain't rocket science. Hams who want to use Morse code learn it and use it. Hams who don't want to use Morse code don't learn it or don't use it and forget it. Hams are hams whether they know and/or use Morse code or not. I know quite a few hams who learned Morse code and NEVER used it at all. They simply didn't like it.

There were many thousands of early Technicians who passed a General written exam and a 5wpm code test who never copied a single character of code after that. They were issued 1x3 calls starting with a 'W'. In those days, you couldn't tell a Tech from a General by knowing his call. Everyone with an amateur radio license was a ham.

According to the ARRL survey, a majority of hams use CW "rarely or never". Would you say a majority of hams are not "real hams"? I got news for you. "The Amateur's Code" doesn't mean Morse code. What is wrong with live and let live?

Specifically, they can only make their determination by weighing the evidence presented during the trial. They are not allowed to consider any personal opinion or facts other than what has been admitted as evidence in determining guilt or innocence.

> By the way, it doesn't take that much effort to be deemed
> an expert witness in most cases.

True, you just have to show the court that you have the experience and expertise of the subject necessary to validate your opinions, and therefore allow them to be admitted as evidence.

> The opposition will use its crossexamination time to discredit any expert
> witness...

They will try... But this is how the game is played. Nevertheless, the court will recognize a person as an expert witness based on their qualifications. If they are qualified to testify as an expert witness, their opinions will be entered into the case as evidence. The jury will never be allowed to hear a layperson's opinions.

>but in the end it goes to the jury for the final choice.

Again, to be based solely upon the evidence presented during the trial, not their personal opinion or feelings on the subject.

Don't know of an FAQ for the Amateur Radio Newsgroups but Jeffrey Herman
has an excellent guide to them at URL:
http://faqs.jmas.co.jp/FAQs/radio/personal-intro

As for the "quasi-professional radio" it would help if you specify what
you intend to use the radio for. Short wave listening? Broadcast Band
Listening? Amateur Radio?? Other??

From: Robert Lonn <rlonn@home.com>
Message-ID: <3ABCE552.C1968945@home.com>
Source record: 62587

For sale is this RCI-2950 from a recent ham radio estate sale. Please check out the pictures. Radio receives great and power output in SSB shown on power meter. Nice overall condition, No mobile bracket or operating instructions. Played around with it, looks OK. Display looks funny due to flash from camera, it is FINE!! All reasonable offers will be considered. Buyer pay's shipping of
$14.00 UPS in the USA. Microphone is an ASTATIC mike with tone control on side. I am guessing but I think that this is not the original microphone but works great. Radio was tested and listened to on another radio, SSB is loud and clear, AM fine etc...
This is my reference link so you know who you are purchasing it from!
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=rlonn@home.com
PayPal or BidPay will work for me. USPS Money order or cashiers check is fine.

With your alleged intelligence one would think you could understand
terms like
"basic, very effective, most simple, easiest to implement under the most
austere conditions". All of which describe radiotelegraphy. But you
choose to ignore those descriptives in favor of your personal choices in
the ongoing effort to rid ham radio of CW.
We know, Cecil, all the other techies would dump you like a prince
turned into an ugly frog if you said what you actually know to be true.

Dan I also have a 88 Toy, I had the same thing here, I went to Radio shack and bought the largest noise filter that they had amp wise. (Choke type) and put it in the power lead at the radio. Fixed 90% + ! I have now put in a new radio, the kenwood 700 and it works fine with that too. (There is still some kind of noise that I don't hear or see on the meter that blocks out some if not most of aprs when the car is running. If I am where there is STRONG aprs it works OK.)

Hi,

My Slinky is as follows. 5 Slinky's with the ends soldered together,
stretched out and hung about 6' above ground. I added a 9:1 matching
toroid transformer.

This Slinky, on receive, usually performs as well as my Alpha Delta
DX-A sloper which has its apex at 45'.

I have been very happy with my Slinky "Beveradge".

Bob

If an expert witness testified the sky isn't blue, would they
be required to accept that as fact? The reality is that
the jury gets to make their own determination as to the

accuracy of whatever they hear is. They do not automatically accept everything as fact.

Cheers,

This is a "myth" someone got suckered into believing. Afew years ago people were swearing that Kenwood & Icom were going to shut down its US amateur divisions in a "few months", & sell their items directly from Japan to HRO & AES. Alinco is doing Quite well latley, many models of their VHF/UHF gear outsells similar models from Ken/Icom/Yaesu. They are, however, closing the Company owned office in Germany later this year, & this is where the rumors must have started. ...This will not effect the distribution or service in Germany, just no more "public" office with 4 people waiting for phone calls to send someone a catalog....This can be handled by their dealers.

http://members.home.net/k0lee/ft100faq.html

visit this link.
The FT-100 eats the IC706MKIIG fact.
Yes with all radios you need to expect problems at the start of production, this is why manufacturers has such generous support even years after the sale to make sure all the radios are up to spec! The IC706MKIIG and the prior model have had some of the most troublesome history of any radio, the ft-100 and 'D' have had only minor problems such as the VSWR light intimittantly comming on with the first of the series and some faulty switches. What i am trying to say is, as amateurs you read all the news groups and every new radio gets a bagging from someone at some time, and most of these people dont even own the radio, why? small poppy syndrome. Yes some radios faulter and the purchaser gets the rough end of the stick, remember we are dealing with surface mount small technology and it is difficult when a 'birdie' arrises. So how do i choose a radio? 1/ list what you want to spend set a budget. 2/ what features you want. 3/ Go and play with one.

Not specifically. Just make sure you use a good braided ground strap
from the chassis directly to ground and wire the power directly to the
battery and you should be ok.

John,

If I'm not mistaken, you stated at one time Mosley offered to give you your money back.

I think I have that post stashed in a file somewhere, if you need your memory refreshed. The post came from you.

Don't you think it is a little foolish of you to have turned down their offer, and wasted all your energy and time (2 years) slamming them over and over again? To say nothing of having spent an additional $1000??

I have to tell you, if it were me in the driver's seat at Mosley and you turned down the offer for a refund and then started spamming me every chance you could, I'd tell you to go "piss off" also.

If there we a half-dozen other people joining you, it would look like Mosley has a problem. As it is, I honestly think you are wasting your time. There's a point man when you just give it up.

I've been taken for cars, and thousands of dollars for other things....but I'd be darned if I would waste the short time I have on earth trying to pee on somebody's leg for two solid years.

Obviously you have them upset with you now, and they sure aren't gonna budge and neither are you...but why subject the rest of the world to your and their little war??

Duke it out with them, or give it up....but please....quit spamming all the public forums. It makes you look worse than them.

I don't want to rid ham radio of CW, Dick. Each and every one of those
digital communications experts understands the usefulness and utility
of CW, whether they use the mode or not. I encourage all hams to learn
Morse code and try CW. It's fun for me and sometimes useful. What I
object to is the Morse code *requirement*, but you know that already.
You seem to think eliminating the Morse code requirement is the same
thing as ridding ham radio of CW. In that, you are simply delusional.

Hello,
I have a question... On my mobile I run 2 steel whips one VHF and the other UHF. Both are on a NMO trunk mount. I was wondering if anyone know the proper lengths for whips to be at to have a good SWR for the HAM BANDS.

1 VHF (144-174MHz Range) would like it to be cut for HAM BAND.
1 UHF (440-470MHz Range) would like it to be cut for HAM BAND.

I used to have a chart for proper lengths but lost it somewhere.

Please let me know...

Jeff,
A little more information is needed. Are these 1/4 wave, 5/8 wave, or a 5/8 with base loading coil. If they are the 5/8 wave with loading coil, you need to check with the antenna maker for proper data.

Mr. Tom,

Just because all their other customers aren't upset, does not mean this person was not treated fairly. Every once and awhile people in any company can become pigheaded to the point of not wanting to admit they just plain screwed up. Why? Because the cost of this means they would have to take it in the shorts big time and with a small company like this, they don't seem to want to. The company's responses on this chap's web pages look to authetic to not be real. I don't have an inside track, I just believe the guy is telling the truth.

Jim,

I have a 706 without a tuner and just change hamsticks when changing bands. I have it mounted in my saturn coupe with no noise at all. The only suggestion I would like to give you is that when you pass your power cable thru the firewall try to find a place that is not near your wiring harness.
Good luck and 73's

If you are going to use it on the higher HF bands, a simple whip is ok. On the lower bands, it will load, if you use a SGC-230 type tuner. If you try a cheaper tuner, such as a LDG, it probably won't. Too much inductance needed. Even if you do manage to match the whip, the radiation efficiency will be unacepptably low. Trust me: get a loaded whip of some sort. SGC uses one that has a self resonance point around 14 MHz. That loads from 80-10 meters. Jim

Hi:

This is trully a neat PROGRAMMABLE radio for one who desires High-Power to get through congested traffic. When you are on the air, not many will be able to capture you out of a repeater. Use a 3DB Gain Antenna and you can have over 200 watts ERP.

This is a 100 Watt (110 Watts mesured) 99 ch Maratrac Mobile Radio that will work over the entire range from 440-470 Mhz.

It also has been custom tuned to work perfectly throughout the 440-450 Mhz Band along with full performace in the 450-470 Mhz Commerical Band as well.

Has a Digital Control Head, Speaker, Mic, Factory Cables, and is in Perfect Condition. Will also program 10-15 channels for free, and this uses a Standered Maxtrac/Radius mobile programming cable.

Photo can be seen @

http://www2.4dcomm.com/metrotech/maratrac.jpg

$435.00+$25.00 for shipping and handling (Will supply the information needed as required for the Ham Use if desired)

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

have this working on APRS and packet with my PC but cant seem to get the Kenwood control programme to work so I can edit the memory etc on my PC. Error message comes up to say cant find radio etc. I am using a standard com cable. The Kenwood programme work ok with the TH-D7E handy. I have also tried the Link700 programme. Again works with the handy but no the D700. BTW the D700 has extended receive.
Help !

None of us will ever know that, because we weren't there watching
throughout the entire process. We are hearing one side of a story,
nothing more...nothing less.

> Every once and awhile people in any company
>can become pigheaded to the point of not wanting to admit they just plain
>screwed up.

Very true, and every once in a while a person screws a manufacturer or
attempts to hold them hostage. I've personally had people tell me
(when they were at fault) they will "post stuff all over Internet if
your company doesn't give me xxxxx".

Some Hams commit fraud over and over again as a way of life, just like
people in other areas of life. When we read a post about "don't buy
from xxx, he screwed me" we have no idea at all who is telling the
truth and who isn't.

Sometimes the posts are right, sometimes they are wrong...we have no
way of knowing. The odds the complainer are correct go up substanially
when others join in with similar experiences from the same vendor. The
go down dramatically when it is one person out of thousands and
thousands of sales.

>Why? Because the cost of this means they would have to take it
>in the shorts big time and with a small company like this, they don't seem

>guy is telling the truth.

Good for you. You should play the lottery with ESP like that.

Myself, I have no idea who is at fault and who isn't.

My reluctance to have sympathy for John is based on two simple facts:

1.) Mosley has been around as long as I can remember (maybe 30 years?)
and this is the FIRST case I have seen of this with them in all that
time.

2.) John himself at one point stated he was offered a refund, and he refused it.

It is almost a sure thing that a company who has sold ten's of thousands of antennas over the years (I've owned several Mosley antennas, starting in the early 70's and I almost never buy antennas) and does business poorly would have hundreds of complaints from multiple people, not just one.

Brand new, never used separation kit for FT-900 transceiver. With this kit you can mount the front plate of the FT-900 on or near the dash of your compact car and mount the main body of the unit in the trunk, out of the way and safe. This kit has all of the mounting hardware and the special interconnect cable. It has never been used and is its original plastic packaging. Price is $45 Firm. If interested, please contact k4icl@worldnet.att.net.

Okay, using your own words, why are we treated to this self-serving observations on the obvious? I'm fairly certain all of us know the current state of affairs when it comes to the code test, so all that "coulda, shoulda, hafta," nonsense is just that.

> What you choose to do about it if

Again, and again using your own words, why are we treated to this self-serving observations on the obvious? Of course what I choose to do about it is up to me, and of course I don't have to justify it to you. Why state the obvious?

> It is particularly irritating when the

For the exact same reason that the person who passed the code test made the statements he did. And for the same reasons you made the statements you did. And both of those collection of statements were just as irritating when the audience is composed of people who, for whatever reason, have decided against the code test.

For a quarter-wave vertical the length in feet equals 234 divided by the
frequency in megacycles.

How'd you get your license?

What you are proposing is illegal but it will work. The AH-4 just
tunes to the transmitted signal it doesn't care where in it's
coverage range that is. All it cares about is that you are no on
a half wave multiple because that is very hard for that type
of tuner to deal with.

Be advised that the Coat Guard has the authority and has been
checking for type accepted HF marine equipment. If you are a
ham you might do OK but if not they might confiscate it. I don't
care what you do I'm just reporting what has been happening
recently.

Many thanks, I wasnt sure cos the 706 manual refers to the AH-3 as being
Amateur band only.
Understand the legality issue, but to have a radio that does VHF marine, HF
marine and Amateur,
all in one, is tempting. Care will be taken.

Hi Guys;
A few years back I bought this Heath HW-5400 Transceiver from a local SK's estate thinking that it would be neat to finish up. As time went on I realize that there is NO extra time anymore so i've decided to sell it here first before putting it up on Ebay.
Heres what we got;
The HW-5400 Matching supply/Speaker/Clock is completed with manuals, Excellent shape, almost mint.
The HW-5400 Transceiver is just about 95% complete, looks like the back panel/FR section needs to be installed, Covers are still in sealed plastic bags.
All wiring is TOP notch as the fellow was a trained tech.
I have all the assembly & operations manuals & rest of the few parts needed.
The Major assemblies are done & installed in the radio so theres not much left to do.
The Radio is like brand new and obviously was never turned on!
I thought it would be neat to be the first to fire it up but now someone else will have that honor.
The price for both supply & radio with everything I have is $450 + ups charges.
All will be shipped in double boxes & in two cartons.
Thanks es 73....Rich WA2RQY (1961)

Jason;
My situation required 're-learning' about grounds as I operate my shack from the second story of my house.

My ground rod does indeed serve as my protection against lightning strikes and defective equipment shorts, etc.
However, the connection was far too long (about 16 feet) to keep my shack equipment at zero RF potential. (My antenna is a vertical, thus even more importance attached to having a good RF ground at the shack)
Many reports of RF in the audio, poor results with otherwise reputable antenna tuners, etc. caused me to install a seperate RF ground system.

I used the MFJ Artificial ground unit to optimize a counterpoise antenna consisting of multiple wires (bundled) but each cut to approx. 1/4 wavelengths for 80 thru 10 meters, fed from the MFJ. The results were immediate, though not in the way I expected. My performance at 80 and 40 meters was vastly improved, with the MFJ showing a pronounced increase in RF current into my counterpoise radial(s). I expected my Ground stake to provide a reasonable ground for these bands, but not so.
What I expected was to see substantial ground current flowing into the coutnerpoise at higher bands (with the theory that my lead from the ground stake was too close to a 1/4 wavelength for these bands) Yet, 20 thru 10 meters seem less dependant on the RF ground system.

Anyway, the RF problems are gone and the system improvement with an effective RF ground is pronounced.

So much for the concept that 'one ground fits all'. You need at least 2 types. (common mode ground systems are another, even more difficult to install system, but highly regarded for RFI reduction)

Now you know what I know.

You are welcome to read the dozens of posts John made, and (assuming
his story is correct) see what you think. I only know about the refund
because John said they offered him a refund. As far as I know, the
refund was on the table until John started spamming them in public.

I have no idea if Mosley is at fault, or is John is the customer from
Hell. All I know is:

1.) About two years ago, John said the antenna wasn't working.

2.) John said Mosley offered him a refund.

3.) John said he refused the refund, and John said he demanded they
come out to his house and repair the antenna.

4.) John has been spamming them all over the place in public ever
since.

5.) No one else seems to have ever had a problem with Mosley, at least
no one joins John in complaining. As a matter of fact, most of the
other comments are positive with the exception of peolle who accept
John's side of the story as fact.

I have no idea who is at fault. John may be right, he may not be. But
quite obviously this is not a normal practice of Mosley, or one many
others have experienced, because no one else is complaining.

The only complaints and "good for you for spamming them" come from
people who have no idea who is at fault.

>I, for one, am happy that they get dragged thru the dirt- they earned it. And
>all your "tough guy, suck it up" rhetoric on their behalf won't change the fact
>that they took the money, kept the product, and screwed the customer.

OK, then you must have been there. Please share with me what you saw
them do to John, or how they mistreated you.

Myself, I have only John's side of the story so I have no opinion who is right.

>Who has the antenna now, Tom?

I don't know, do you? All I know is what John says...and that's half the story. Since you obviously know both sides to be able to reach a conclusion, why not tell us.

>Who has the money now, Tom?

I don't know, do you? All I know is what John says...and that's half the story. Since you obviously know both sides to be able to reach a conclusion, why not tell us.

>No malice, my opinion,
>Martin
>K�MB

Since you were witness to the whole thing Martin (otherwise you couldn't really have an opinion), and since you have must have heard both sides of the story, maybe you can tell us what your saw...or what your bad experience with them was that makes you feel they deserve this?

I'd like to know, because I see the other end of this stuff first hand. I see a few people a year who absolutely fabricate complete stories and demand products or money with the threat they will tell a false story in public if their demands are not met.

Of course some people are smarter than you and I. They can tell who is at fault without knowing both sides of the story. So tell us, what is the other side of the story or what was your experince with them Martin? How long have you known John?

That is not a "perfect example" unless the end result of removing the code
requirement is that you can no longer use CW. If, after removal of the code
requirement, you or anyone else that wishes to learn and use CW is free to
do so there is NO parallel.

Again, unless the end result is that it becomes illegal to use CW the
comparison is invalid.

Sure it is. The outcome of the argument is not the issue. The issue is that
you have a group of people with absolutely no expertise on the subject
forming an opinion based on personal feelings and self interest, that they
are trying to convince others is correct.

The Kenwood TM-241A has a nine conductor connector between the display and the display control board. The solder connections on one or both sides of the connectors break down. The only cure is for either the owner or the Kenwood Shop Tech to remove the connector from the display control board and the back of the display and replace it with a ribbon cable. This works great and lasts a whole lot longer than the original connector. Marilyn Hartley W4ME

> Sure it is. The outcome of the argument is not the issue. The issue is that you have a group of people with absolutely no expertise on the subject forming an opinion based on personal feelings and self interest, that they are trying to convince others is correct.

The people who oppose the Morse code exam statute 47 CFR 97.503(a) are not required by law to be proficient in manual Morse code reception in order to petition their government to delete the rule. The Amateur Radio community have ignore the facts and laws for too long. Your delusion that only Morse code experts can decide this matter is pure non-sense.

In its 1999 License Restructuring Decision , the FCC acknowledge the effect technological changes on the need for Morse code proficiency:
"the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems."

In a October 27, 1997 briefing paper prepared for digital television broadcasters, Mr. Erwin G. Krasnow noted the effects of technology on regulation: "The Supreme Court has observed in CBS v. DNC that the FCC must "walk a 'tightrope' to preserve the First Amendment values written into the Radio Act and its successor, the Communications Act." After referring to its Red Lion decision, the Court noted that "[t]he problems of regulation are rendered more difficult because the broadcast industry is dynamic in terms of technological change; solutions adequate a decade ago are not necessarily so now, and those acceptable today may well be outmoded 10 years hence." Columbia Broadcasting Systems, Inc. v. Democratic National Committee, 412 U.S. 94, 117 (1973)."

Because of technological and operational changes, the manual Morse code exam is unnecessary. Its use as a licensure examination element to authorize frequency bands and emission types, other than manual Morse code operation, is arbitrary and capricious. The exam is even arbitrary to authorization Morse code operation, since such operations can be conducted by computer control.

The ITU rule S25.5 forces the FCC to impose a requirement upon its citizens that is unlawful. 5 U.S.C. 706, "Scope of review" provides:

To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall - (1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be - (A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right;
(D) without observance of procedure required by law; (E) unsupported by substantial evidence in a case subject to sections 556 and 557 of this title or otherwise reviewed on the record of an agency hearing provided by statute; or (F) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error.

The FCC has dealt with the Morse exam matter more directly. The telegraphic examination was removed as a requirement to qualify for Technician Class operator license in 1990. In its Report and Order (FCC Record 7631), the FCC stated:

(a) "For the amateur service to achieve its purpose it must have the participation of as many qualified persons as possible who desire to pursue that purpose. Modern commercial and military electronic systems require engineers to design them, technicians to install and maintain them, and a technologically literate citizenry that can use them. The amateur service should, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves where the United States needs expertise. We do not foresee that telegraphers will be in as great demand by future systems as will electronics and communications experts."

(b) "Telegraphy skill has been required for each person who has ever been issued an amateur operator license in the United States, including the current 493,000 licensees. Mastering the Morse Code was an arduous task for many of these licensees, and by developing their telegraphy skills they expressed their intense desire to become amateur operators. It is understandable, therefore, that there are licensees who are reluctant to share the amateur service frequencies with new licensees who have not made a similar effort to master the Morse code. We conclude, however, that telegraphy skill is not so essential to proper operation of a station that transmits exclusively above 30 MHz such as to justify turning away otherwise qualified persons who do not possess the skill. The Notice, furthermore, did not propose to delete the telegraphy skill requirement for a licensee to be the control operator of a station transmitting below 30 MHz where telegraphy communications take place extensively and worldwide communications are possible. The sharing of frequencies between codeless class licensees and other licensees can take place on frequency bands above 30 MHz where telegraphy operation is minimal and where the transmission of

the more modern emission types such as data, image, phone, pulse, RTTY, and spread spectrum, predominate."

(c) "We do not concur with the comments alleging that the passing of a telegraphy examination is an indication of the examinee's good character, high intelligence, cooperative demeanor, or willingness to comply with our rules. These traits are also found in individuals who have not passed a telegraphy examination rather than being exclusive to those who have passed such a test. For regulatory purposes, passing a telegraphy examination is no more and no less than proof of the examinee's ability to send and receive texts in Morse code at some specified rate. With respect to comments that make claims for the superiority of telegraphy over other types of communications, we do not consider these arguments as germane to this proceeding. The Notice did not propose to discontinue the authorization of telegraphy CW emission types on any amateur service frequency. The amateur service in the future, as it has in the past, can provide to those who personally desire to do so the opportunity to communicate by telegraphy."

The 13 and 20 word per minute telegraphy examination was removed as a requirement in 1999. The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143 that:

(a) "the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

The Morse code requirement is finished. Give it up before you destroy the entire Amateur Radio Service.

Larry, KC8EPO

Do you have a tower just laying in your yard/garage/barn? Or a suplus one you want to get rid of. I dont have allot of cash but maybe we can work something out. I am finally getting a home and for the first time I can put up some decent full size antennas. Will drive 300 miles do get it.

They say that only for legal reasons. The AH-4 should tune anywhere within it's limits (3 to 60 mHz???) provided, of course, that the antenna it's hooked up to can work on those freqs.

I have an Icom 706 so I can't say for the 718, but on the 706 there is a way to boost the volume of the UT-102. However, the manual doesn't tell you - I found it by searching on the internet.

Kind of a silly example, wouldn't you say? A vast majority has never fired a thermonuclear device either, and yet they would have you believe that based on their feelings and opinions, you should have to give up your personal thermonuclear device, if you had one.

Or taken even further, take the anti-drug crowd - the vast majority of them have never even shot heroin, and yet they would have you believe that based on their feelings and opinions, you should have to give up your needle.

> Just why the heck would anybody in his/her right mind pay the ARRL to be a
> member? For what?

Because it is the only national ham radio association in the US, and as such is the sole protector of every US ham's interests, rights and privileges. Because without it, ham radio would cease to exist after losing every Hz of spectrum to special interest groups who, unlike you and your CB buddy, are well organized and represented.

> Who cares?

Whoever cares about the future of ham radio, not only in the US, but in the entire world.

> The ARRL is losing members day in and day out. They have to ask themselves,
> "Why?"

Provide data to support this claim, please.

> The real reason for this loss of members is simple.
> 1. It costs too much and you get nothing back.

Bullshit. See above. What's the cost nowadays, $34? You mean to tell me that you "can't afford" lousy $34 to be a part of the organization that protects *your* interests? You probably blow more than that daily on beer.

> 2. The magazine is too full of voting and political agendas.

Bullshit. Nobody forces you to read those pages, nor the rest of the magazine for that matter.

> 3. Nobody really cares about the ARRL.

Bullshit. Nobody meaning you.

> 4. The ARRL really doesn't care about you.

What do you want? Flowers for Valentine's? Chocolate on your pillow?

> 5. The ARRL has an agenda that does not help Hams.

Ah, yes. Now we're talking... They shot Kennedy, too, didn't they? And they covered up the Roswell conspiracy.

So if Mosley offered a refund at one time, they are right to keep the money AND the antenna for all time?

The basic concept here is "Right vs Wrong" and since the customer here is in the minority, he must certainly be "Wrong" because the majority is against him.

This type of logic is irrational. Remember, it was the majority who chose to kill Jesus.

Of course the outcome is the issue. If it weren't then there would be no
debate either way. Besides, what "expertise" is needed to see that
mandatory testing for only one mode out of dozens is wrong? Those that have
"expertise" on the subject are also basing their opinions on personal
feelings and self interests and trying to convince others they are correct.
And it isn't only those that have yet to pass the code requirement that are
```

against it. If it was about to be made a criminal offense to learn or use the mode you would have an argument. As it stands, I can only see the code test being valid if EVERY mode that might possibly be used is tested for proficiency. Then and only then would the code test have a valid leg to stand on.

There are probably going to be a lot of complex Slinky versions posted.
Mine is probably one of the simplest. I have a Radio Shack DX-380. Solder
a piece of wire (I used telephone wire) to one end of the Slinky. Connect
the other end of the wire to an alligator clip. Hang the Slinky from
something sufficiently high that the Slinky does not reach the floor.
Connect the alligator clip to the whip antenna of the radio. And yes, in my
experience, even with this simple configuration, it does improve reception
considerably.

Not everyone is on these newsgroups... :-)

I have a TA-53M since 1994 and I wouldn't trade it for anything else.
I choose it because it's a nice compact antenna that does not hang
over my neigbour's garden too much..
I had to call Mosley a few times because they kept moving the delivery
date ahead twice because of 'parts not in stock'. A few people I know
had the same trouble (delayed delivery and missing parts). Mosley took
care of the problems though and every Mosley owner I know is happy
with their antenna.
When in bussiness every once in a while something goes wrong and as
far as I can see (and I followed this thread since the beginning) at
some point John and Mosley got stuck negotiating and both parties held
to their viewpoint very stubborn..
Maybe it's time for both parties to get around the table face to face
and try to resolve this matter. As long as they don't talk, nothing is
getting solved.

I for one would have taken the offer to get my money back.

> Ed Cregger, NM2K
> nuke663jlm@vei.net

It seems strange to me that of all the people I know that have owned 706's of all 3 types, very few have had problems. Only one that I can think of of all of them, and he bought it second hand I'm sure. The 706 is an older design than the ft-100. It's pretty much had most of the bugs worked out. I haven't had a lick of trouble with my 706g yet. On the other hand, the people that I know that have ft-100's haven't had any trouble either.
But I have heard more trouble stories about the ft-100 when it was new, than the ic-706 when it was new. I think both have been debugged fairly well by now. MK

>
> Steve Johnson, N2FT

Well, the shorter the power cable the better, but as long as the wire is thick enough shouldn't really matter.
The thickest wire always the best for a 12v mobile rig. Less voltage drop. Which can give you an extra margin against FMing, chirping ,ect if the battery drops down a bit. So far, I haven't mounted my 706 at all. I bought a large pistol case, and made cutouts for the radio, paddle, mike, etc, and carry it with me for whatever car I'm in. I just sit it on the seat and run the radio right in the case. I have a car and a truck, so a real mount not a good idea for me. I never know which I'll be in until I decide to go somewhere. MK

I don't know that for a fact JJ, do YOU? All I know is that is what John claims.

I don't know John, do you? I don't know if he is honest, or a crook. I don't know if his statements are accurate, or not.

Do you?

>The basic concept here is "Right vs Wrong" and since the customer here
>is in the minority, he must certainly be "Wrong" because the majority is
>against him.

Most customers, as a matter of fact virtually all of them, appear to have no problems. We certainly know many thousands of people have delt with Mosley over the years.

The great unknown in all of this is John. No one on here appears to have dealt with him. He might be quite honest, or he might be a crook. I have absolutely no idea.

Only an absolute fool would take one side of the story, offered by a total stranger, as etched-in-stone fact.

>This type of logic is irrational. Remember, it was the majority who
>chose to kill Jesus.
>JJ

I agree 100%. That is because the crowd did not know Jesus, and simply wanted to beleive the worse. It's easy to "pick on the target", and listen to the nasty stories without knowing whether they are true or not.

Shame on you for rushing to judgement JJ and after hearing half the story assuming it is factual and complete.

But then, that sadly is the mentality of many people...and has been since time began. Many people rush to judgement and believe everything bad they hear....even when it comes from a total stranger and the facts don't seem to make any sense at all.

It called lynching, and the mob mentality.

This is a neat looking little radio, but it is basically a CB. At the price I've seen these going for ($300) you could spend a few dollars more and get an older model ICOM 706 or Yaseu FT100. A few of the extra features from a real amatuer rig like the ICOM or Yaseau are more power, a better reciever, full HF coverage, 6 meters, 2 meters, and 70cm(depending on the model), and CTCSS tones for repeaters. As I recall, the 4900 doesn't include any tones for 10 Meter repeaters.

That being said, there is a lot of Superstar 4900 info at www.cbtricks.com. It looks like the radio can be set to default to a CB, 10 meter, or wideband personality depending on how jumpers are set inside the radio. If you do buy one, please come back and give a review of this rig from an amatuer perspective.

Dave, what the court was saying is that technological change will change the
validity of FCC rules. The Morse code exam requirement was valid at one
time, but today it is not.

You don't think that the Amateur Radio community can not lose frequency
allocations. The FCC must allocate frequency in the public interest.
How is the public interest satisfied by maintaining a non-conforming
requirement?

Looking for complete manual for MFJ 4114 power supply / battery
pack unit (matches the 94xx series Travel Radios).

Looking for schemtics only for MFJ 9440 Travel Radio and 415B
CW Adaptor. I downloaded the manuals from the MFJ web site,
but they didn't include the schematics (got a blank page for
the schematic page).

Any thoughts or comments on the MC-85? Will it work with both a 2 meter
FM radio and HF radio (both are kenwood)?

Thanks in advance,
Erik

> if they wanted to because of lack of skills.

And what about those code tested "Hams" who don't have knowledge of the various digital modes, ATV, satellite operation, and the list can go on and on? By your logic those code tested Hams are not "REAL Hams" either. They don't "possess the skill to operate" as you put it. What goes around comes around. If you want to conjure up some logic, like yours above, just be prepared to have it applied universally, then we shall see if the shoe fits or not.

> Which is basically what the whole discussion is about...

Amateur Radio elitism organized along the Code / No Code dividing line. You can dress up the CW elitism up anyway you like, but it's bigotry anyway you look at it.

Remove the microphone and see if the problem stops.

The up/down scan on the mic may be causing the problem (either shorted wire in cable, or bad cherry switch).

jhilins,
I have no idea if the Jeep is more susceptible to RF than
other vehicles, but I'll offer this. Route all cables as far
from the 'computer' as possible. Do NOT use braid as a ground
strap, it will deteriorate in weather. Instead, use a copper
strap such as the flashing used around roofs. And make the
best mechanincal connection you can. Most problems with mobile
antennas usually come back to grounding.
The standard steel whip, or SGC's whip are useless on the
lower HF bands. They ~will~ load, but no one will hear you.
If your going to use 80 and 40 meters, invest in some kind of
loaded antenna, otherwise you will be a very frustrated camper.
'Doc
PS - Also, invest in a 5 gallon bucket of torroids...

The answer is yes in theory, if all radios use the 8 pin plugs. I think they may sell others, so still yes. The slight doubt is that having had one for 15 years or so, it has had a tendency to RF feedback, especially on the 80m band. I am not the only use with the odd touch of feedback. G3OSS has given up, but I can use mine. Now there is a mod circulating the end of which I have never found, neither on packet, nor at www.mods.dk. The author implies that the problem is multiple earths in the MC85, but does not give the details of the fix. I have rewired one link to an IC-746 with similar difficulties, but that may be due to the sensitivity requirements on the audio input on that radio. It is a great product with some problems. Ken

That sounds like B.S. or ignorance to me. We'd still be going to town in horses & buggies if everyone thought like that. One persons complaint and we don't buy their products. Ever hear anyone complain about their car or the manufacturer. Fords are no good, Chevvy's are crap, Mopars are junk. Yeh, we hear it every day. Do we still buy them? And if you do have a problem with your car that the dealer can resolve satisfactorily, you go to the manufacturer, and believe me, if you bad mouth them, you'll get nothing, Unless they sense they will get some goodwill in return, your complaint will fall on deaf ears. Very few reputable companies nowdays, want bad press. They are either consumer oriented and they will be out of business. If you treat them right, when you have a problem, they will usually treat you right. I've owned many Mosely antennas over the last 40 years, and they have always been on the up and up. Lets get real, if you base your purchasing decisions on one person grumbling, you won't purchase much in this world. Old proverb: Don't believe anything you hear and only half of what you see and you'll be better off.

Hi,

Have you been soldering for years and now are getting cold solder joints? Are you aware that flux has a limited lifetime? Did you buy that 1 Lb of solder at a flea marked for next to nothing and find that it doesn't solder well?

Flux has a limited life. This includes the rosin flux in the core of your solder. You can still utilize that solder with an external application of flux. Kester sells a "tin" of flux, SP 44. This is a paste and seems to be mildly active. I have also tried flux from several other manufactures and have found out that a very active rosin flux is needed when repairing old solder joints with old solder.

The most active flux that I have found is sold by Radio Shack. It is a paste flux in a squeeze tube. Works great and will help you to produce those beautiful shiny joints again.

Does anyone know who makes this flux for Radio Sack and how it can be purchased direct? I would like to buy this flux in another container. It is difficult to squeeze this stuff out without making a mess.

Regards,

Bob

I'd wager Mosley has sold hundreds of thousands of antennas in the 30
years or more they've been in this business...and one complaint is
enough to discredit them. Truthfully, this is the ONLY complaint I've
seen about them in what......30 years???

Amazing when you think about it, isn't it?

Hmm, yes.. I had to memorize it on the test. As you MAYBE remember what you get tested on throughout your life, you only retain 10%. All the stuff you get tested on you remember on test day but soon could forget if you don't use all the time. I did however remember the calculations and measurements. I was only asking because I wanted to make sure all was on target. Which it was..

I am using some solder that is almost 20 years old. Still works
fine and makes good looking joints. I do use 63 / 37 solder
rather than the normal 60 / 40 type. I find that it has always
made better looking joints and does less damage to the circuit
boards.

Message-ID: <HuQv6.3402$l61.665121@news1.news.adelphia.net>
Source record: 62466

after reading this post, i contacted mosley for some input....

Please note i was interested in one of their antennas, and asked them for their side, but had issues with this guys problems...

Here is their response: dated 03/26/01

Just like anything in life you have thousand of good works, which go un-announced, but one problem and the trumpets blow. I guess some people just like to think the worst about others whether they know the facts or not.

For over 60 years, all of us here at Mosley have cared very much about our products and doing a good job. This situation with Mr. XXXXX is the first in the companies history!
Sincerely,

The Mosley Staff

PS When our attorneys clear us to give our side we will. Mr. XXXXX has a legal action against us, and his attorney and our attorney have told us that we can only respond to them. Mr. XXXXX attorney has advised him against what he is presently doing, considering the current action. I can say that we offered Mr. XXXXX a full refund in 1999 when we saw that he wasn't willing to do the things that we where asking, such as send back the traps so we could check them. This offer was repeated in January of 2000 via our attorney. This was done via registered letter with a return receipt, which we have. I wish we could say more. It seems to us that if a customer was unhappy, and we offered a full refund, why didn't he take it when it was offered? Makes you think, doesn't it?

Mark,

I have to agree with you. I have 2 706s--the original and the G. I
only had trouble once with the original and that was last year--after
owning it since '97. I suspect that its failure was due to something
I may have done inadvertently. I am very happy with them both.

I was about to buy the FT100D last fall, when I was warned that I *may*
run into trouble with it, and I discovered that it couldn't be made
NTIA compliant as well. So I stuck with Icom. Another thing I like
about the 706s is that they sound good on AM-a mode I use on 40 and 75
once in awhile for kicks.

All in all, I highly recommend the 706 series to anyone.

Doc,

It amazes me that the tuner/whip combinations garner any sales at all. Of course, it is just MHO, BUT that opinion is based on many years of HF mobile study, installation, and mistakes. In some cases, a hamstick will outperform those things--and a hamstick is just about the worst thing on the lower bands. I wouldn't waste my time, nor my hard earned cash, on those things.

It is an unfortunate thing that some people *really* believe that a "tuner" actually "tunes" an antenna. I had such a conversation with a supposedly knowledgable Extra class last week! When I pointed out that tuners don't "tune" the antenna, he confidently assured me that a certain brand of "tuner" both (quote) "physically and electrically" tune the whip! PHOOEY! I hear sub-standard mobiles on the air all the time. They are often down in the mud, unreadable, or just not even *there*. Yet their owners swear by the "great" performance their tuner/whip combo is giving, how "good" their hamstick (dummy load on a stick) is, and my question is always: Compared to WHAT? Put 'em in field trials, run field strength tests against bugcatchers and screwdrivers. See the superior field strength of competitive, high Q, RESONANT antennas--it'll make ya sick! I guarantee your tuner/whip or hamstick will get MASHED in a field trial.

Now, having thrown off on the tuners, etc, let me say this: Certainly, there are times when it is not feasible to use higher efficiency antennas. The spouse threatens bodily harm if you drill holes in the new car, or there is no way to attach a big antenna. You do what you have to with what you can. And that is understandable. But if you are out for the best signal you can obtain, it takes a BIG, UGLY antenna to do the job.

Most paste flux is acid based and shouldn't be used for electronics.

I have been using flux core solder that is very old and it's just fine. I have some paste flux too but the only think I use that for is 'tinning' the iron tip and any kind of non-electronic work such as outdoor metal, etc. And when I do that, I use 50-50 tin-lead rather than 63-37 or 60-40. It's stronger although does require higher temperatures for a good joint. But I don't use a regular soldering iron - I use a propane torch with solder tip for such stuff.

Well actually, they're the sole protector of ARRL's singulara
interests, first, then if there's anything left, US hams as a group
might get a little attention.
Back in the days of HPM it was as you say. But HPM is long gone.

Jeez Jerry, you're confusing the heck out of me.

Didn't you say a couple of weeks ago when someone asked about wiring a CB to: wire the hot side to the battery and the neg side to a nearby bare metal groud?

I had thought of wiring my CB direct to the battery (pos & neg, both fused) and then had second thoughts after reading that post of yours.

Now I've interpretted your post below to say pos and neg to battery.

4352. FA: YAESU VX-5R TRI BAND HT + ADMS1E Software Kit

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-27 02:04:44 UTC
From: "Paladin Music & Entertainemnt, Inc." <PaladinMusic@yahoo.com>
Message-ID: <99osj3$7kr$1@bob.news.rcn.net>
Source record: 62476
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.scanner

I have this unit up for auction at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1224750078&r=0&t=0&showTutorial=0&ed=986076487&indexURL=0&rd=1

I bought this radio less than a month ago for a trip to California but didn't use it because I forgot the power supply! LOL! Everything is in new condition, complete in the original box. The VX-5R still has the plastic LCD screen protector on the it.

This is a tri band: 6 meter, 2 meter and 440 mhz handie talkie with wide range scanning capabilities including Middle Wave, Short Wave, VHF, AIR, UHF and 800 mhz. The specific ranges covered are: 0.5 - 16 mhz, 47 - 729 mhz and 800 - 999 mhz (less cellular). Radio has been MARS-CAP modified for authorized users.

The supplied 7.2 V 1100 mAh Lithium-ion battery provides 5 watts out on 6M and 2M and 4.5 watts on 440 MHz. Features include: 16 digit 9 memory DTMF autodialer, CTCSS/DCS, 220 memories, aluminum die-cast case and 8 character alphanumeric display. The HT is very compact at 2.3 x 3.4 x 1.1 inches. The complete package includes the following:

YAESU VX-5R tri band transceiver / scanner.
YAESU AC adapter/charger - NC-72B/C/U.
YAESU rechargeable lithium-ion battery pack 7.2V 1100 mAh - FNB-58LI.
YAESU 3 band rubber duck antenna & extension.
YAESU operating manual.
YAESU original box and packing material.
YAESU ADMS-1E Programming Software.
YAESU ADMS-1E Programming Cable.
YAESU ADMS-1E User Manual.
Additional Software included: Easy VX-5 Editor, Ver 1.70

So why am I selling such a great radio? I want to put a tri-band mobile rig in the car since that is where I spend most of my time. Again, item is in mint condition, no marks no scratches, everything works fine, original box and packing plastics. I am the original owner. Winner pays fixed $3.50 shipping unless winner is international. Personal check, cashier's check or money order okay. NO PAYPAL! 73's and good luck!

Larry, you are citing a court case pitting a commercial broadcasting
network against a national political party. That the case and its
issues have little to do with amateur radio seems to have escaped you.

Can lose? I don't think that amateur radio will lose any of its HF
allocations though we might see 40m realigned in future.

We don't have a "non-conforming requirement". There is still a 5wpm
requirement for HF access. I don't think you should waste time blowing
smoke up the asses of those congregated in this newsgroup. Mount your
soapbox and spout your homemade semi-legalistic rantings where they
might make some difference. Here your stuff is just cheerleading.

You are clearly uninformed as to who is forming opinions
as to the rational and need for code testing. Many, including
myself, have "been there, done that" as to passing the
code test at speeds greater than 5 wpm. Not all those
opposed to continued code testing are so "uniformed"
as you think.

In the absense of any contradicting comments,
the FCC sure seems to think so too. I haven't read
one FCC comment that put any rational into
why code should be kept as a test...with the singular
exception being that for now, it still is a treaty
requirement.

No, the braided (or whatever) ground strap I was referring to goes between the radio's chassis and the Jeep body or chassis. It's just that a braided ground strap provides not only a good DC ground, but a good RF ground too. The positive side still goes to directly to the battery through an inline fuse. The rule-of-thumb is that the ground wire should go to the closest possible electrical ground. The ground wire can either be the black wire, or simply a ground-wire (or braided ground wire) connected between the radio's chassis (like a cabinet screw) and the Jeep's body or chassis. HTH!

>Jim-kg4enu

Here's an excerpt from an e-mail I sent last November regarding the display problem. I was able to fix this 'common' problem. BTW, the radio is still working great after the fix.

"I was getting random garbage on the LCD display. At first I thought it was the semi conductive strip that connects the PCB to the LCD itself. I cleaned that connection several times to no avail. The radio sat in pieces for all those years until about 2 years ago.

What I remember is resoldering one of the small surface mount connectors. I _think_ it was one that connected the LCD subassembly to the display board subassembly. A small white connector perhaps .125" tall and .5" wide with 10-12 connections in it. Can't remember if there was more than one of these connectors or not.

After re-heating the connections and re-assembling the radio, the problem went away. All of these problems occurred after my wife's car was broken into and the radio stolen. San Diego Police caught the two car burglars and recovered the radio which was mishandled and slightly damaged.

I can tell you this though, I remember spending a whole lot time working on the LCD itself with no results. After reheating that one connector, it worked like a charm. Give it a shot."

Uniden has PDF versions of their manuals available for download at
www.uniden.com -- then all you need is the Acrobat Reader (free at
www.adobe.com) and you can view it on your computer or print it out if
you prefer.

Hi all
I have just picked up second hand one of these alinco 6m radios
however i wonder if anyone else has got one and could clariy
something for me,
Repeater shift on this radio seems to work strange, when you first
set up a repeater shift on this radio, it works fine and it has
reverse repeater shift to allow listen on input, so far great.
ok here is the strange bit, the only way i have found to use the radio
on simplex is to select zero offset on the repeater shift function, you
then still get the shift + or - sign on the screen but no offset.
Are all Drm06sx like this ??
the manual refers to semiduplex/ simples mode which is why i am
not convience that the radio is faulty just that it is a very strange
design . nowhere in the manual does it mention turning the repeater
shift off.

Thanks in advance mark

Hello, go with a screwdriver antenna, it does not need a tuner...its big, its ugly, but it beats everything else, that I've tried. Hamsticks work soso above 40m, but for 75 go with the screwdriver. Ground the rig to nearest chassis ground, just grounding thru the coax shield is not good enough. It will work some without it but will work better with chassis ground. I've used a 706 for a couple of years and have learned the importance of good grounds and good antennas. On the bugcatcher, they work fine, but everytime you want to change frequency you have to stop and move the jumper. Hope this helps...AL

This appeared in another thread. I thought I would repost it here...

....Hammer wrote:

after reading this post, i contacted mosley for some input....

Please note i was interested in one of their antennas, and asked them for
their side, but had issues with this guys problems...

Here is their response: dated 03/26/01

Just like anything in life you have thousand of good works, which go
un-announced, but one problem and the trumpets blow. I guess some people
just like to think the worst about others whether they know the facts or
not.

For over 60 years, all of us here at Mosley have cared very much about our
products and doing a good job. This situation with Mr. XXXXX is the first
in the companies history!
Sincerely,

The Mosley Staff

PS When our attorneys clear us to give our side we will. Mr. XXXXX has a
legal action against us, and his attorney and our attorney have told us that
we can only respond to them. Mr. XXXXX attorney has advised him against
what he is presently doing, considering the current action. I can say that
we offered Mr. XXXXX a full refund in 1999 when we saw that he wasn't
willing to do the things that we where asking, such as send back the traps
so we could check them. This offer was repeated in January of 2000 via our
attorney. This was done via registered letter with a return receipt, which
we have. I wish we could say more. It seems to us that if a customer was
unhappy, and we offered a full refund, why didn't he take it when it was

offered? Makes you think, doesn't it?

(portions of this text were edited to protect the identity of the individual
(s) involved)

Hammer

xxxxxxxxxxxxx

Interesting isn't it? It appears WA7AW was offered full refunds TWICE....and repair help which he refused.

Now he is bitching.

That singular exception makes HF morse testing the law of the land, Bill
so it must have some bearing. That is certainly more than comes from a
homemade lawyer quoting from a court case between a commercial
television network and a national political party. Larry's chants of
his new age mantra are a bit premature.

The two matters have very little to do with each other, Bill, no matter how much you might wish they did. Why can't our "I-found-a-law-book-under-a-tree" expert cite a case involving amateur radio? Could it be because there aren't any such cases?

Source record: 62352

Yaesu FT-757GX w/FP-757GX Power Supply. 550.00 Shipped.

This set is in excellent condition. I bought it new and hardly had a chance to put it to real use due to being in the Army and either having it in storage or living in an antenna restricted area. I doubt you will be able to find one in this fine condition. I have all original boxes and paperwork. I do not have a microphone because I bought it with the MD-1 base mic and use that with my FT-736R.

I would say there has probably been no more than 25 hours total use on this radio (if that) as I never did much HF work. I was more into VHF and used a TR9130 for that. The radio has absolutly no rub marks, nare a scratch and has been in a non-smoker enviorment. I will gladly send pictures to anyone who requests them. Payment may be made by paypal or money order.

Thanks
Gary

Fair enough. However, the majority clearly believes in some other scam, be it Mohammed, Buddha or Stalin. The Taliban simply continued where the Inquisition stopped.

A simple head count. There are over 1 billion Chinese and over 1 billion Indians. Then there's the rest of Asia. Almost none of them are Christians.

Hi Guys;
I got a few of these great 440mhz mobile antennas for sale, cost is $24 shipped priority in the USA.
Sealed in original packs.
The Quality is much better than most, all Stainless Steel with PTFE insulation, two antennas in phase for 5dbd gain & only 28" tall, fold over feature also. A great antenna, made oin Italy.
Check out the specs here>>

I'm sorry, but you're not getting my thermonuclear device until you pry it from my cold deap fingers (not to mention a few hundred thousand other cold dead fingers).

Anyway, lets not be silly - the two examples just don't fit together. Private ownership of firearms is a tradition that goes all the way back to the very start of this country (every person who signed that Constitution, and the Bill of Rights, owned a gun), but I'm not aware of anybody who is honestly suggesting a right to privately own a thermonuclear device, nor is there any tradition of such ownership. In other words, these two are not even in the same ballbark - in either capabilities or political debate.

Yes.

2G makes repeater splits significantly easier to set up.
2G has 440 mHz
2G has more power on 2m (50w)
2G has backlit keys (absolutely necessary for mobile ops, IMO)

Regardless of which one you get, get a Heil mic to go with it. Either the
HS-706 or the HMM-ic (will need an adapter for that one).

I'm not sure I follow you... What might those "ARRL's singular interests" be and what do you propose as an alternative to the *only* national amateur radio organization? Cutting off one's own nose to spite the face is usually not a smart choice.

Look, clearly it is in every US ham's interest to retain as much spectrum as possible for as long as possible. Fiber optics in every house will alleviate the pressure, but it will not eliminate it. Everything else is petty stuff which is not critical for the survival of amateur radio. Once we absolve this fact, the choice is simple: we either support our one and only ham radio representation in the world or not - we keep our hobby alive or not.

Well, geez, every person who signed that Constitution was also a slave owner,
but you could hardly condone that nowadays, especially with all these nutcases
running around demanding their $1 million retribution in gold bars.

> , but I'm not aware of anybody who is
> honestly suggesting a right to privately own a thermonuclear device, nor is
> there any tradition of such ownership. In other words, these two are not
> even in the same ballbark - in either capabilities or political debate.

Why not? I am simply asking for consistency: a thermonuclear device falls into
the same category of "firearms" as a six-gun. They are both devices used for one
purpose only: to kill people. Everything else is a smokescreen. Now, it would
seem to me that the very same amendment you guys are pulling in the case of
handguns, rifles and automatic weaponry must cover *all* firearms. One person's
definition of danger is another person's definition of safety. What this boils
down to is this: that amendment is somewhat anachronistic.
Btw, neither you nor Dick commented on the second part of my example - the
narcotics use. But I admit, here we are dealing with one of those things that
make people feel good and politicians re-elected. War on drugs. Any day now.

73 ..... Zoran WA7AA

And in case anyone's wondering: I own neither a handgun nor a TND, but I do
support a right to bear a handgun or two; I also support legalization of all

drugs except to minors, followed by revamping of the legal system with the emphasis on expanding a death penalty. Too radical? Hell yeah, but with 1% of the US population in prison, something better be done before it gets worse.

I wouldn't call the ARRL the "sole" protector of amateur radio in the U.S.
Many amateurs, whether as individuals or as groups (clubs, repeater
coordinators, or others) comment on pending FCC rulemakings and write
Congress-critters (as they are called in another newsgroup). Only if the ARRL
were the only entity talking to the government would the title of "sole
protector" be appropriate. Nothing says that each individual licensee can't
comment directly and must go through the ARRL.....

Nothing says that - you're right. However, how much clout do you think US hams would have with FCC and congressmen if they kept showing up in groups of 5 to 10, without unified representation, on a strictly individual basis? We could all comment ourselves right out of all the spectrum.

Nothing says each individual US citizen can't fight an invading army on his own and in groups, but doing that would be the biggest mass suicide since Jim Jones. That's why we have the US Army. And that is also why we have the ARRL - to have a strong, unified and committed representation so we don't look like a bunch of jokers. Frankly, I don't understand what's all this dislike of the ARRL - what's the big grudge? Would someone care to explain?

Come on now, even Clinton couldn't make that one fly.... A gun can only
kill a single person within the shooters' direct line of sight per
discharge. This weapon targets a specific person, and has the option to
only wound, as well as kill. It does not destroy the surrounding buildings,
all life forms in the surrounding area, and pollute the land with radiation
for the next several centuries.

If what you say were true, then the ATF would be enforcing the laws
regarding Nukes... :>)

You are just as wrong as you can possibly be, as most anti gun people consistantly are. I have absolutely no intention of killing anyone with a gun, but I also have no intention of allowing you to confiscate them. I DO have an intent to use them - the mere existance and presence - to deflect those who would cause bodily harm to me and my family. Almost always, the mere sight a weapomn of defense is more than enough to put the coward to flight. Should the assailant be in an unusual state of mind, such as drugged or insane, and insist on forcing me to use a firearm to stop him, of course that would be the natural progression of things.
Soit was when columnist Mr. Carl Rowan, a rabid anti-gunner, shot an intruder. He sure changed his tune in a hurry. Curious thing, that he even OWNED a gun, what with all his anti-gun rhetoric, isn't it? Do YOU own gun, by the way?

Now, it would

I'm not real eager to take seriously the opinion of anyone who can't differentiate between a personal firearm and a nuclear weapon. Looks like a screw may be loose somewhere.

First and formost, selfpreserveation, on a the BOD level. Consider the
January vote on whether or not to support code testing at the next ITU
meeting.
The vote to drop code testing was by a voice vote, with no identity of
who voted how. There was a lone effort by a BOD Member to poll the BOD
for each member's vote, which was quickly voted down. None of those
voting against keeping code testing wanted his vote made public, and
without a individual poll of the vote it will not be, officially at
least. Since the BOD members are elected as individuals, the entire BOD
can't be held accountable for such a vote since they can't be elected
nor unseated en masse.
Just a bit of defense against the will of a large bloc of ARRL
members' wishes. Selfpreservation at it's finest.

and what
> do you propose as an alternative to the *only* national amateur radio organization?
> Cutting off one's own nose to spite the face is usually not a smart choice.

Oh, no, alternatives haven't proved viable to date. Just understand that
the enemy is not always outside looking in.

>
> Look, clearly it is in every US ham's interest to retain as much spectrum as possible

> for as long as possible.

Not at all. We use little of our UHF/SHF allocations, and it might very
well be in our best interests to "trade" some of that unused real estate
for some we could make better use of, maybe on HF or VHF. I think that
most of the Part 15 intentional radiator devices would be much better
off above UHF instead of on HF where they do far more damage, but that
battle was lost long ago.

Fiber optics in every house will alleviate the pressure, but
> it will not eliminate it. Everything else is petty stuff which is not critical for
> the survival of amateur radio. Once we absolve this fact, the choice is simple: we
> either support our one and only ham radio representation in the world or not - we

And while we're at it, keep the heat and pressure on them...

Actually, pistols are most often used as a deterrent to avoid killing
people. All I had to do one night was to display my 9mm and the mugger
with the knife broke an Olympic record running away.

Did you hear about the eight year old who got suspended for pointing a
chicken strip at a teacher and saying "pow"? One wonders what would have
happened if he had pointed the chicken strip at a teacher and said, "yum".

I had diphtheria when I was three years old. I would have died without
antitoxin shots. The doctor didn't want me to hate him in later life
so he had my mother hide my eyes so I wouldn't see who was hurting me
for my own good. That's what the ARRL BOD did for you, Dick.

4414. TS-520 lamps

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-28 15:49:18 UTC
From: AB2HR <ab2hr@arrl.net>
Message-ID: <p324ct40d63ie1h1qp31eqm8558rspbdki@4ax.com>
Source record: 62389

Hey folks... Really simple question here... Feel almost silly asking it. Anyway, the lamps for the frequency indicator window on my TS-520 have burned out - been burned out ever since I acquired the radio some two years ago. I actually didn't think there WERE lamps in that window... Anyway, curiousity got the better of me, and I pulled off the top of the rig to take a look and sure enough, one bulb in place, not working, and what looks like it might be a spot for a second. The next thing I did was look to see if there was an easy way of accessing the bulb.

And this is the reason for my posting. From what I could see of this radio, the most direct way of getting to this bulb is to pull all the knobs and the tuning dial off the front of the rig, pull off the face plate and attack the problem from that direction. Sure sounds like a hell of a lot of work just to change an errant lamp or two. Has anyone out there actually changed these lamps and if so, exactly what did it involve in terms of access? It just seems stupid to me to design a radio that has to be dismantled to such an extent in order to replace a blown-out lamp...

I have a pair of KLM amateur radio satellite antennas for sale. Both antennas are in good condition and each has the optional polarity switcher. Because these antennas are already assembled I can not ship them. I am willing to meet someone halfway up to about 100 miles or so. I am located in Union County, NJ.

I will sell both antennas for $150.00 or any reasonable offer. I want to sell the pair together.

You can view the antennas at the following URLs:

What got me interested in radio was my Science teacher and Math teacher. One taught the theory and the other taught the code. We started a class after school. Not everyone was interested. People are being flooded with tons of high tech gadgets like never before. If I want to work New Zealand I can get onthe internet with a voice program and chat and still exchange qsl cards. (I dont). Hard to beat that. I hear there will soon be direct internet link from home to satellite someday soon.
Do people want to build anymore???? Hard to beat the selection of stuff available. Just a day away from the mailbox. I was interested in electronics so it didnt take much to get me hooked. I used to build my own weather satellite receiving equipment from surplus stuff back in the 60's but heck now it is on the internet. Now I read about the old days and keep a tube rig in the shack so that if it breaks i can fix it. I can see the tubes, resistors, caps, etc. Not surface mount stuff. I cant afford to throw it away if it breaks.
Other hobbies have gone the same way to a degree. I fly radio control planes and it has changed over the years. Got a lot better. I dont have tobuild as much due to ARFs. Radios are better. Thank God I dont have to fight with a gas filled superregen receiver tube. We couldnt fly 5 at a time then like we do now.
My 2 cents.

4424. Re: IC706MKII vs. IC706MKIIG

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-28 19:34:09 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3ac23cd1$0$62145$bbae4d71@news.net-link.net>
Source record: 62300

Eric: I have both and both are great rigs. Used 2's are a good buy sometimes and may be the better choice if you are pinching pennys. A new G would be the choice if you really need 440 all mode at 20 watts. With the G you also get easier to set up repeater freqs, 50 watts on 2 meter (vs 20 on the 2) and back lit keys. You can also get a cool optional carrying handle that only fits the G. If output on vhf and uhf is not important, and you already have a dual band mobile, get the 2, save $ and spend it on a good HF antenna system. If you buy the 2, used, you would have enough left over to get the matching AH-4 antenna coupler and a 102" whip and cover 40-6, and a mag mount 2m antenna.
Whichever you get, play with it in the house for a good week or so before going mobile, and don't try to set up memory channels while in motion! I use the 2 mobile now and the G as a portable do all rig and back up in the house. I use a separate dual bander mostly for 2/440
With either rig, a Heil mic makes a big difference. I got the HS-706 head set and it works great. The Heil hand mic need an adapter and it does not have up/down buttons--(HEY BOB--put up/down buttons on the mic and a modular plug and you will have a great mic!) The head set is the way to go with kids and wife on long trips!

Murray is kind of thick, his messages are dropped off servers because he
insists on having a .vcf attachment. Attachments in text only newsgroups are
dumped by many ISP's

Kenwood TS450/SAT I would consider trading for good HF mobile set. Rig is a 9.5/10, only thing I can find wrong with it is the case sides scraped and slightly pulled out (at mounting holes) where previous owner had mobile bracket mounted. 100W on all bands. Due to a severe power line noise problem at my QTH I might be forced backed to HF mobile. Wondering what is out there. I can supply pictures if needed. I am located in Ontario Canada.

Please e-mail direct as I don't get on the NG's too often.

mdonoghue1@sympatico.ca

Thannk you,

> to kill people.

Oh, come on. Surely even you can see the difference. A gun can be used by an individual for self-defense, recreational shooting, hunting, and so forth, in addition to it's use as a weapon in warfare situations. A thermonuclear device, on the other hand, is strictly a weapon of war - it cannot be used by an individual for self-defense, hunting, or anything else not related to warfare. In other words, these are not at all in the same catagory (hince are not treated the same when it comes to the law).

> Now, it would seem to me that the very same
> amendment you guys are pulling in the case of
> handguns, rifles and automatic weaponry must
> cover *all* firearms.

Again, handguns, rifles, and automatic rifles or handguns, can all be used for self-defense, hunting, and recreational shooting. And, yes, contrary to the opinions of most anti-gun advocates, an automatic can be used for hunting. In fact, the primary appeal of the automatic is that it can fire a single round in hunting situations, but can also be used an automatic when needed for self-defense. And both modes offer value for the recreational shooter (target practice, competitions, etc). Therefore, it is perfectly reasonable to say that all of these should be covered by that amendment.

Now, perhaps you can answer a question I have about anti-gun advocates. The clear goal of these people is the total elimination of private gun ownership in this country. At the same time, most of very these same people also tend to be anti-police - they often advocate a reduction in the number of police and advocate restrictions on police authority and activities. It these two agendas are accomplished, exactly who is going to defend my family? Are you, an anti-gun advocate (and most likely an anti-police advocate), going to do it?

Oh, OK, you got me. I'm just trying to piss you guys off. But, wait, what if you are attacked by a fairly large mob armed to the teeth and there's no way in hell you stand a chance with a six-gun. Can you at least use a flame-thrower on the punks? What about Mustard Gas?

Although, some would say this becomes borderline genocide. Like shooting fish in the barrell. Like working DX in nets.

We are dealing with legislation in both cases, and legislation is never written in stone. Just as slavery was legal one day and illegal the next one, the same thing can happen to the "right to bear arms". Surely there is such a thing as a constitutional procedure to repeal amendments.

Well, as long as we're swapping life stories, I'll admit that I've always been sorry that I did not have a shotgun when a burglar broke into my apartment some years ago (while I was in it). Not because he broke in and tried to rob me in order to feed his habit, but because the son of a bitch came back that night and set the balcony on fire and we almost got burned alive.

Do you guys read the damn thing to the end before you hit the Reply button, or what? Both you and Dwight called me an "anti-gun" advocate even though I clearly stated in my previous message that "I do support a right to bear a handgun or two".

> I have absolutely no intention of killing anyone with
> a gun, but I also have no intention of allowing you to confiscate them.

Fine, I have absolutely no intention of killing anyone with a TND, but I also have no intention of allowing you to confiscate it. Let's assume I have one, for the sake of the argument.

> I DO have an intent to use them - the mere existance and presence - to

The problem arises when a monkey wrench is thrown into the "natural progression of things", like all those high schools shootings in the last few years.

> Soit was when columnist Mr. Carl Rowan, a rabid anti-gunner, shot an
> intruder. He sure changed his tune in a hurry. Curious thing, that he
> even OWNED a gun, what with all his anti-gun rhetoric, isn't it? Do YOU
> own gun, by the way?

:-)))))))) Please refer back to my previous message where it clearly says: "I own neither a handgun nor a TND".

> I'm not real eager to take seriously the opinion of anyone who can't
> differentiate between a personal firearm and a nuclear weapon. Looks
> like a screw may be loose somewhere.

It is mind boggling how quickly a reasonably normal discussion turns into name calling. This means either that you and your militia are already polishing a silver

bullet with my name on it, or you are out of arguments.

Maybe so, but I still consider these issues non-crucial in the rapidly changing rules of the technology game today.

> well be in our best interests to "trade" some of that unused real estate
> for some we could make better use of, maybe on HF or VHF.

How the hell you gonna trade it if and when you lose it? Your statement is paradoxical: on one hand you're saying that it is not in our interest to retain as much spectrum as possible, and on the other that we need to trade it. Even so, I got your point and I happen to agree with it - I would gladly give up MHz's of UHF/SHF allocations for expanded HF bands, but the only problem is that people who are willing to pay gold for UHF have nothing to offer in return - they don't own any HF and they don't care for it, unless one day 80 meters becomes the best bet for cellphone use.

I had the same problem with my TS-820. In fact the bulb needs to be replaced again (I've let it sit like this 8 years after changing it the first time).

If I recall, it's much the same as the TS-520 but I believe I made the repair without going through all you described (is wasn't simple none-the-less - and you are correct it's DUMB. Now that you've reminded me of the problem it's time to fix it again, although it's no big deal because I can still see the dial even without the bulb. Nice though in a darker room without the main lights on.

Patrick;
Call the Radio Shack outlet store in Ft. Worth, Texas. The regular RS store attached to it had one last time I was there at the closeout price of $99.99. Maybe it's still available.

More kids are killed in high school sports than in high school shootings.
Magnitudes more are killed in automobile accidents. We seem to have lost
all perspective when it comes to guns. Punish the criminals, not the guns.

Yeah, well like I said to Cliff when he e-mailed me....

Think this rig'll be dark for some time to come. The lighting of the
dial window is a mighty small return on the investment in time to tear
the whole front end of the radio apart....

Yep, the repeal of slavery took a constitutional amendment and the repeal of
the right to bear arms will take a constitutional amendment. If guns are outlawed,
unarmed citizens will be absolutely helpless against armed criminals who don't
care about gun laws. England is doctoring her stats to try to hide the fact
that their armed criminals are out of control. If an armed perp gets off on
a technicality, that crime is erased from the stats.

> fire and we almost got burned alive.

In this country, guns have always been used for more good than evil. The
liberal press simply doesn't report the good done by guns. Gun laws will
disarm the good guys and leave the bad guys armed - bad idea.

How true. When I went to school in Los Angels areas of California in the 60's and 70's almost every kid I knew had access to a firearm at home. Back then you could buy a gun over the counter at Sears, Montgomery Wards, JC Penny, Pep Boys, True Value Hardware, etc. cash and carry. You had to be 16 to buy a long gun, and 21 to buy a pistol but there were no laws against your parents buying you a pistol if they wanted to.

Many of the kids I went to school with were regular hunters and outdoorsmen along with their fathers, uncles, etc. I had three younger siblings and we all had our own rifles which our parents gave us as Christmas presents around the ages of 10 or 12.

There was never a firearms related incident in any of my schools, or even in my neighborhood (unless you count the time one of my neighbors shot some low-life who was trying to rob the local shoe store during the original Watts Riots).

There were also no drug dealers and gang bangers on every corner when I was in school. The record companies would never dream of putting out any of the "Cop Killer" Rap music which is present today - and the kids' parents would kick their butts if they ever tried to bring that kind of crap home.

The police were allowed to actively suppress crime rather than just reacting to it after the fact, but now days every hoodlum is taught at a young age "I know my rights, I'll sue you for ..." And parents are regularly prosecuted for "Child Abuse" if they try to make any attempts to prevent an out-of-control juvenile from running wild on the streets.

Yes, we have a big problem these days in the schools - and in society in general - but it is not, and has never been, a gun problem. It's a people problem, and as long as nobody in power has the "brass" to address it for what it is, it will only get worse...

Yeah, check out the Alinco DM-330MV power supply. Go to the URL below and
click on the link near the bottom left.

http://www.alinco.com/usa.html

This is one of the power supplies reviewed by QST that has one of the lowest
levels of switching noise generated, and is packed with features. I got mine
at R & L Electronics for about $160. The other nice thing about it is its
small size! I have an Astron SS-30M too, but I like the Alinco better.

I would look for an ASTRON or ICOM P/S of at least 20 amps.

Read the manual for the radio, some of the newer radios require 22 or
more amps.

Message-ID: <_DNw6.56715$Q47.14153318@news1.rdc1.tn.home.com>
Source record: 62337

I cannot get the alphanumeric momory name function to work on my Kenwood TM-261. I bought the radio used and don't know much history on it. I have tried a full memory rest with little success. Here is what I have observed:
--When I follow the procedure to program memory names, the radio comes on as normal. However a time-out beep occurs after a short time like it was in a menu.
--The MN button beeps when pushed as if it is toggling between alpha-numeric and number display but no change in the display.
I'm stumped and any help would be appreciated.

Eric, I have two Astron supplies, one is an RS35M and the other is an RS 50M (thats for the test bench). Astron makes one of the best supplies on the market, at least in my opinion. I have had the RS35 running non-stop for years and never the first second's trouble. I think the IC706 runs around 100 watts, so I would recommend a supply that will handle a constant current of at least 25 amps. My RS35 supply will handle something like 27 amps continuous and I am running an IC756 on it.

Some of the newer switching supplies are good, but make sure they are well filtered. A standard switching supply is going to probably generate too much hash and interference on your rig. The advantage to the switching supplies are they are MUCH lighter and run cooler than a standard DC supply.

Go for a nice, heavy, solid as a rock linear power supply such as the Astron. You need at least 20 amps, but I'd go for at least 30-35, since you'll likely power other rigs and accessories from the same supply.

Switching power supplies work OK, are lighter, but aren't as solidly built, nor last as long.

>Still wondering what he's gonna do for an antenna, but that's
>another issue.......

Wire, m'boy. Get a dipole up and use a tuner. (anticipating the next question ...) ... there are plenty of good tuners out there. I'd avoid MFJ (I'll NEVER own anything MFJ except their little mobile speaker, I have TWO ... they're great). Vectronics used to make a good tuner (DLP300) but now that they're owned by MFJ, I'm a little wary. LDG Electronics makes a very good auto tuner for a little over $200.

Okay, in that case you can use thermonuclear device. However, you'll have to limit it's yield, say perhaps to a small tactical device capable of taking out a smaller town instead of the whole city. :-)

> Although, some would say this becomes
> borderline genocide. Like shooting fish
> in the barrell. Like working DX in nets.

Well, that might be true. Of course, it depends on what you're shooting at. My brother-in-law uses an assualt rifle to keep the bears and coyote (wolves, or whatever they are) away from his farm animals in Wyoming. Of course, it is also effective for smaller animals also - he can't hit them, but the sound, and dirt flying up from nearby hits, is enough to scare the holy heck out of them.

> Holy crap, which part of the country do
> you live in? East LA?

Not at the moment (my mother-in-law lives there, though). No, its fairly peaceful where I'm at now, so I mainly use my guns for target practice at the moment. However, when I move (yes, I've been saying that for a year), I intend to move a little further in the woods, and would appreciate having a good weapon around (just for my own peace of mind).

Absolutely well written, W6DKN. The problem is not guns, or the cars used for joy riding, or the street corners used to sell drugs, or anything else beyond the people involved. Until attitudes change, and we end this seemingly endless tolerance to everything subversive to civilized society, the problems are simply not going to stop.

Ladies and Gentlemen, I am considering putting up for sale or trade; a Motorola Radius P110 UHF radio. Right now the radio is in the 450 area but has capabilities from the 430-470 Mhz range. It has, technically 8 channels, but the 8th,right now, is set up to scan whichever channels you program it to scan. It has a brand new battery and 90 minute charger. Im probably wasting my time by adding this, but it also comes with the UHF antenna and the lapel speaker/mike. For me to say that I know how much this radio is worth would be for me to lie to all of you kind people, but as it has been explained to me it is worth several hundred dollars. Exactly how much baffles me but if you bring me the right trade- I will be more than happy to trade or sale. Its in like new condition, I cleaned almost all of the blood and bodily fluids out of it. Just kidding, but it used to be an EMS/ Law Enforcement radio, but was taken out of service when the officer had to take a leave of absence due to a medical condition.

The trade would be by/with the FCC, not other users. The Amateur Radio
Spectrum Protection bill that has been kicking around in congress for a
few years says something to that effect, not that it will ever actually
become law.

4484. Handheld Mounting and Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-30 08:09:35 UTC
From: John Proctor <john.proctor@blackboxoz.com.au>
Message-ID: <46Xw6.1$g32.320@vic.nntp.telstra.net>
Source record: 62260

I have a Yaesu VX-5R which I use with an external antenna in the car. It would be a great idea to have some sort of mounting bracket that I cout put the radio into which I could then connect to 12VDC to keep the battery charged and a connection to a broadband amplifier say 10-20W on 70cm.

This is sort of like a car kit for a cellular phone but without the ease of a standardised I/F connector which brings audio/dc/rf out to external interfaces.

Has anyone seen such a device? If so can they point me at it?

Regards,
John Proctor

No one's taking your guns away, Dick. If we lived in a perfect world where everybody's happy and friendly and lovey-dovey, there would be no need for firearms, but sadly this will never be. Until then, it will take a majority of Americans to amend the Second Amendment, and it's not happening in our lifetime.

Anyway, 73 to you and Dwight and everyone else taking part in this gun-free exchange. I'm QRT.

The FCC does not own any spectrum, but they are more or less a combination of the Wall Street and
Judge Judy when it comes to spectrum assignment. The Wall Street part of them would like to auction off every Hz to the highest bidder, and the Judge Judy in them would like to make everybody happy while collecting a large salary. Since this is irreconcilable, we have a problem,
and that problem is an increased pressure on our bands. Now, the real owner of the bands is actually everyone and no one, which means that regular Joe Sixpacks eventually may get to determine the fate of amateur radio (indirectly, of course - whoever heard of Joe Sixpacks running the country; that's what we have politicians for). As a matter of fact, "our" bands are
not at all ours, since we have already stated that everyone owns the spectrum, and the ham-radio
population happens to be a very small percentage of the US (and world) population, which means
that Joe Sixpacks don't give a rat's behind about us and our perceived needs. Therefore, if there
is no strong, organized and unified effort of the entire ham-radio population, the spectrum will
start to disappear no matter how many no-code licenses are given out and no matter how many VHF
radios are sold. By far the best vehicle for such an effort is always a national ham-radio organization, which in the US happens to be the ARRL. That is why it is my belief that every US
radio-amateur should support the ARRL in one way or another, even if he/she differs

philosophically with it in some or most other issues.
I haven't even begun to address the problem of the international scope: the HF spectrum demands
of the developing countries. The WARC and ITU will not so much as glance at petitions coming from
any sources other than recognized national ham-radio organizations. The FCC can only go so far
within the limits of the international agreements, so the real battleground is actually outside
of the US soil.

And now I rest my case.

73 ..... Zoran

Now, wait just a minute. There's a need to fill my freezer with venison.

> Until then, it will take a majority of Americans to amend the Second
> Amendment, and it's not happening in our lifetime.

Don't look now, but the Second Amendment has already been essentially
repealed. Am I free to bear arms inside a US Post Office? A lot of
the federal gun laws are unconstitutional.

Thank God! You had better hope and pray that those in power are never able to convene a Constitutional Convention again. With the current beliefs and attitudes of many in Congress these days the Second Amendment is not the only thing that would be at risk. The First Amendment would be right behind it, and then the Fourth, etc.

A Constitutional Convention is the single most dangerous thing that the current crop of politicians could do. The aftermath would be the end of the United States as we know it...

Source record: 62275

Allen,
The method described in the original manual was wrong (if you have the original manual).
Here is the info on using the alpha names:
(Make sure you have the channel programmed with freq, offset, etc before trying to tag the channel with a Alphanumeric name)

1. Press MR to select memory recall.
2. Switch OFF the power to the transceiver.
3. Press MN + POWER ON
The transceiver enters the Memory Channel Select mode.
4. Turn the TUNING control, or press the microphone UP/DWN to select the desired memory channel.
5. Press REV
The first digit blinks.
To enter a dot after the first digit, press MR. Pressing MR again clears the dot.
6. Turn the TUNING control or press microphone UP/DWN to select the first digit.
7. Press MN. The second digit blinks.
8. Repeat steps 6 and 7 to enter up to 6 digits, then press REV to complete entry.
To re-enter the preceding digit, press VFO
You cannot enter a dot after the sixth digit.
To subsequently name another memory channel, repeat steps 4 to 8 without exited the Memory Channel Select mode.
To exit the Memory Channel Select mode, press MHZ, F, TONE, Mike PTT or PF on the microphone.

And there you go...
73,
David K5DEL

I'm a Cowboy, not an Indian. :-) And Robin Hood would probably have traded
his bow and arrow for my SKS with a 30 round magazine full of armor-piercing
ammo. Can you imagine the king's armored knights charging Robin Hood equipped
with an SKS?

4502. FS: TD Systems 70cm ATV Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2001-03-30 20:08:56 UTC
From: Jim <kc1rm@twcny.rr.com>
Message-ID: <sJ5x6.13025$nR.2441662@typhoon.nyroc.rr.com>
Source record: 62277

I have a TD Systems ATV transceiver with the 70cm modules for sale. The transceiver consists of a small control unit for the shack, and two remote mountable modules (downconverter and PA). Connections from the control unit to the modules is via low cost RG-59 cable along with a single 4 wire control/power cable. This allows mounting the modules up near the antennas and saves money on expensive feedlines.

The PA produces 15 watts and has two channels, 439.25 and 434.00. The downconverter is continiously tunable.

The transceiver does function and is in good shape for its age. The control pots are a little dirty and could probably use replacing or cleaning.

The package includes the control unit, the 440 modules, two lengths of RG-59 coax cable, a control cable, and a photocopy of the manual.

Pictures available on request. Asking $365 plus shipping.

Jim, KC1RM

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by- |
group/rec.radio.scanner. The author writes a monthly |
"Scanner Equipment" column for Monitoring Times magazine, |
published by Grove Enterprises, http://www.grove-ent.com |
but views expressed in this article are his own.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)

25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

W9INN (Bill) has granted me permission to create and publish a web page devoted to his outstanding antennas. It includes a diagram of one of his more popular 5-band resonant HF fan-dipoles - the MPD-5C which comes in either a 78ft or 87 ft model. I have included contact info for Bill and included the measured 2:1 VSWR bandwidths I obtained.

Just click on this link http://www.ab7sl.com and then the W9INN Antennas button .

I have worked 289 DXCC countries (ssb-only) on Bill's antenna (in less than 5 years) and felt he deserved a little internet presence as he has yet to create his own site. All the info you need to reach Bill is on this page. 73 / DX

Whether such a device exists, it'd probably be cheaper, and a lot less
jerry-rigged, to just buy a dedicated mobile rig with 40 or 50 watts output :-)

These little ht's will eat you up in costs, trying to get all the accessories to
make them work like real, fixed/mobile rigs. I'm finding that out with my Icom
T2H...

Maha sells a dual band (2M/70cm) amplifier with what they call a
'docking station'. The docking station matches the configuation of a
battery pack, take off the battery, plug into the docking station,
take off the duck and plug into the amp and you have a 35 watt dual
band mobile with the HT powered by the amplifier power connection.

Bob brings up a very valid point though: now you really do need a
speaker mic, perhaps even an outboard speaker. You will be forever
changing battery and antenna connections as you take the HT out to
carry with you and this can get frustrating. Also the controls are
just plain not as easy as those of a fixed/mobile radio and if you
need to make many adjustments 'on the fly' it is harder on an HT -
especially if it is now tied down to a fixed mount.

Can it be done? Certainly. A mobile rig is the better way to go - it
will cost a bit more than the amp and a speaker/mic but if you can
swing it you will be happier in the long run.

Hi Guys;
Getting down to the last few parts from my 32V-2 xmtr.
Have:
power transformer
Choke
3 filter caps(1-rectangal HV Can, 2 round cans)
Some switches.
All can be used to HB a tramitter aslo.
Please make offers, i'll add shipping.
Thanks es 73....Rich WA2RQY (1961)

BOYCOTT KENWOOD!

Confirmed Anti-Coders!

Here is an equipment manufacturer lobbying the FCC to drop CW testing.

This is a quote from Federal Communications Commission REPORT AND ORDER
Adopted: December 22, 1999

Released: December 30, 1999

By the Commission: (The entire document can be viewed in plain text at
http://www.fcc.gov/Daily_Releases/Daily_Business/1999/db991230/fcc99412.txt

)

28. ... Kenwood states that licensing of persons because they are
proficient in Morse code is inconsistent with encouraging those
interested in modern telecommunications to join the ranks of amateurs
and become skilled in the technical sciences. ...
29. On the other hand, several commenters equate passing a telegraphy
examination to the type of on-the-air operator a licensee will be, proof

of skill level, or emergency communication capabilities. Kenwood,
however, states that Morse code telecommunications is not a skill used
often in emergency communications or disaster relief any longer. Other
comments express a personal preference for exchanging messages with
other amateur radio stations using telegraphy. While Kenwood agrees with

these observations, it states, however, they are not a sufficient
justification for keeping Morse code proficiency as a licensing
requirement. ...

NO CW TEST means CB.

And only CBers would want to eliminate the only thing keeping ham
radio from becoming CB. It is high time for firm action to save ham
radio from the CBers and the lobbying profiteers. (The FCC mentions
"Kenwood" in a policy-making action eleven times!!)

Since Kenwood has now entered the political arena, they are now subject
to political response. WE DON'T NEED KENWOOD!

DO NOT BUY KENWOOD GEAR!

SIGN YOUR CALL WITH "BOYCOTT KENWOOD!"

It is already like a CB band on 2M; so what is the point, since many unlicensed users can buy it on ebay with no licence needed.

FCC seems dont care at all, no sweeping, no nothing.
Even in my area the splater signal as strong as S3!

Uhhh Robert, CB doesn't require a technical test. I think that alone makes it a little tiny bit different.

But wow! Using CB to inflame the masses against Kenwood was a stroke of genius. We all hate CBers, RIGHT!

Don't stop at Kenwood but boycott ANYTHING FROM JAPAN! Have you heard those JA stations? They sound just like CBers!! Yea! BOYCOTT JAPAN!

Thats the way I did it. Pulled the front off and also loosened up the mounting to give more access room. Then put it all back together again. Not really as hard as it sounds. Just a PIA. You can do it in an hour or less once you get the hang. MK

>
> de Keith VO1AE

I didn't know the ts-130 had an SWR meter. You sure it's not a relative
rf meter? If thats the case, there should be an adjustment somewhere to
adjust the level. usually on the back of the rig. Or do you mean using a
external SWR meter? If this is the case, either a jumper is bad, or
possibly the finals are whacko and oscillating and putting out mainly
spurious output which on your antenna will naturally show a high SWR
being as the output is on a freq than your fundimental. Kinda hard to
say without more info. MK

Get a life, Robert! No cw test does NOT mean CB! Your argument is a compilation of specious claims, half truths and distortions of the truth. If the cw test is supposed to keep the riff-raff off the ham bands, then how do you explain all the lids on HF, 14.313 for instance? (Many of whom are Advanced and Extra class.) If you like cw and want to use it, go right ahead, nobody is stopping you. The hams you are objecting to (non-cw operators) won't be in the cw sub-bands, so what's your problem! It would make as much sense to require a typing test for all hams in case they might decide to work packet. Personally, I'm studying code right now and plan on attaining a 15-20 wpm proficiency, not because I have to, but because I want to. There is nothing holy about cw, the code was not engraved on tablets by God and given to Moses. It's just another method, if dated, of operating. Besides that, look at the DATE! (Adopted: December 22, 1999, Released: December 30, 1999) This is old news! It's already been hashed and rehashed. Where is the cave you've been hiding in?

Mark
K5MAR

Look at the bright side: you only have to do it once in your lifetime if you use high luminosity (or even regular) yellow LEDs instead of incandescent lamps.

Source record: 62212

Ladies and Gentlemen, I am considering putting up for sale or trade; a Motorola Radius P110 UHF radio. Right now the radio is in the 450 area but has capabilities from the 430-470 Mhz range. It has, technically 8 channels, but the 8th,right now, is set up to scan whichever channels you program it to scan. It has a brand new battery and 90 minute charger. Im probably wasting my time by adding this, but it also comes with the UHF antenna and the lapel speaker/mike. For me to say that I know how much this radio is worth would be for me to lie to all of you kind people, but as it has been explained to me it is worth several hundred dollars. Exactly how much baffles me but if you bring me the right trade- I will be more than happy to trade or sale. Its in like new condition, I cleaned almost all of the blood and bodily fluids out of it. Just kidding, but it used to be an EMS/ Law Enforcement radio, but was taken out of service when the officer had to take a leave of absence due to a medical condition.

Message-ID: <3AC58B78.5E978475@home.com>
Source record: 62217

NOTE! Please email me first to be sure I have antennas still available.
I can also provide a 10 ft. jumper with BNC connectors at each end for
$6.00 extra for a total of $61.00. Thanks!

a reference from one of my customers!!
(Thanks Robert, I received the antenna, it was as I expected and works
great with my Garmin GPS-III+. Don't hesitate to use me as a reference.
73 de AC7KE)

I have for sale, once again, a bunch of these real neat GPS antennas. I
had 12 units that sold out in a few weeks last year. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPS-1, GPSII+, GPS III plus etc.
units that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Payment via PayPal or USPS Money Order or Western Union money
orders.
Money orders and will ship in a few days, if you do send a personal
checks I will ship when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

I was just over at the Ten Tec factory 2 weeks ago and was very impressed with the Pegasus and the Jupiter. Our club president, W4NSA, has a Pegasus that he is in love with. Several other members have bought Ten Tec (including myself) and are very happy.

An added benefit is to "buy American" and keep industry & manufacturing alive in the good old USA. Every "rice box" purchased sends more jobs abroad. Driven past any vacant factories in your area lately? (One is vacant,right beside Ten Tec.... it used to be ELECTRO-VOICE microphone company.) Thank the owners of Kenwood, Icom, Yaesu etc for the demise of the American dream in your neighborhood.
Remember Pearl Harbor .... 73 JJ

>Keith (Use Reply-to for email)

Keith and all,

1)
Robert (in my opinion) is talking CRAP - No Code test is NOT CB.
I hold a UK B Class licence (CEPT class 2) this is a "No Code Licence"
and have held it for 17 years. I passed the technical paper with better
marks than most UK hams (2 distinctions at the time = 85%+) and I do
not consider my self to be "a CB'er" I have had much fun and more
importantly learnt an awful lot in my time operating VHF and UHF.
I consider DX working to be harder to achieve on VHF / UHF and up
than on HF (30MHz and below). but in each case the technical
achievement is what matters, at H.F. it is getting an efficient aerial (opps
sorry ANTENNA) system at VHF it is getting good low noise figure and
sensitive RX with out it suffering IMD problems.

2)
Morse is not dead - it is no more dead that it has been for the last 17
years most of the hams I know of that have passed a code test
DO NO HAVE REGULAR QSO's USING THE MODE !!!
That said I agree that proficiency at using Morse should no longer be
used as a bar to operation on H.F. amateur bands.
Given that the forthcoming ITU conference is t o discuss the matter
I hope that the requirement in international law for a Morse qualification
will be dropped.

CW is part of the HOBBY it is NOT the hobby !!!
We may even see an increase in its use, now that will be progress !!

by the way I have my code test booked for end May 2001.
and why have I gone to the trouble of learning code ?
Because I wanted to..

whether I will operate my own H.F. station (ie on my own licence) is not the point.
I find that the more I practice the more I like it.

<< Why not? I am simply asking for consistency: a thermonuclear device falls into
the same category of "firearms" as a six-gun. They are both devices used for one
purpose only: to kill people. Everything else is a smokescreen. Now, it would
seem to me that the very same amendment you guys are pulling in the case of
handguns, rifles and automatic weaponry must cover *all* firearms. >>

Nyet. One is a Weapon of Mass Destruction (WMD). The other is a multipurpose individual weapon. Ask the BATF.

But....back to the original topic. I'm one of those "scumsucking no-coders" some Extra class licensees seem to hate. Yet, I'm currently restoring an HW101, I have a Yaesu FTdx560 running (with transverters on 6 and 2M) and will upgrade to General or better in the near future (hopefully in a week!!). I have done this with the support of NO hams (except my father; RIP W4QAZ) .....decided I wanted to get my ticket and have done so. I rebuild equipment, build what I need, and have quite a junkbox.

Does that qualify me to avoid most of the rhetoric spewed forth towards those desiring to join the ranks of amateur radio operators? I understand that many tend to type (or typo!!) first, think last, but the amount of rhetoric spouted forth here is easily enough to put off even the most thick-skinned person. Do those who react this way REALLY want to welcome newcomers into the amateur fraternity?

I'm in the hobby because I enjoy tinkering on electronics (EE background), have made quite a few friends in the local area, and am having quite a bit of fun on 6M (when it's open). Hope to do the same on HF as soon as I get my HF privileges (esp. 10M).

73 de KG4GSC
(PS. Not a CBer, never a CBer, tho no offense against any who are/were. And I do own/understand/handle correctly firearms.)

I am finally considering replacing the old TS-820 and have been looking at both the Kenwood TS-570 SG and the Yaesy FT-920. I'm wondering if anyone has experience with both rigs and could provide any comparison...both features and performance? My primary focus will be 160-10M SSB/CW/Digital Modes - 6M is not a big deal to me!

Thanks

Bob Wilson

Most of the old hams can't remember what they memorized.

Most of the old hams couldn't pass the CW test they took to get their
license.

Hello Robert and the group,

On the other side of the coin then. Lets make it mandatory that to get ANY Amateur ticket you have to PROVE proficiency in ALL the modes available to hams, not JUST code. In order to pass you must PROVE you can solder, align a radio, put up a tower with antennas and it must be with a perfect match! I could go on for hours..... Then we can change the name from Amateur to Professional. Please read the reason Amateur Radio exists in the FCC's rules.....

Point is this.

IF WE DO NOT INCREASE OUR NUMBERS WE ARE GOING TO LOOSE ALL OUR FREQUENCIES TO THE COMMERCIAL SECTOR WHO WILL PAY BIG BUCKS AND NOT CAUSE THE TROUBLE THAT WHINING HAMS ARE CAUSING THE FCC.

IF WE DO NOT INCREASE THE NUMBER OF TECHNICAL PEOPLE WE ARE GOING TO BE A TOTAL THROW AWAY SOCIETY AND BE AT THE MERCY ON FOREIGN TECHNICIANS. WE ARE IN A WAR TO KEEP OUR ECONOMY FROM CRASHING. LOOK AT THE WAY DAIMLER HAS BOUGHT CHRYSLER AND STRIPPED THE MONEY AND TECHNOLOGY OFF THE COMPANY AND NOW IT IS IN RUIN. AH.....BUT ONLY IN THE US, THE GERMAN SIDE FLOURISHES. THEY AND OTHER FOREIGN INTERESTS ARE TAKING OUR ECONOMY APART FROM WITHIN USING OUR OWN LAWS AGAINST US. THESE ACTIONS ARE ILLEGAL IN THEIR OWN COUNTRIES. NO NEED FOR A WAR IF THEY CAN USE OUR OWN OPEN LAWS TO DESTROY US.

Back to the subject.....

Time to get with the times. When was the last time you Elmered a kid or even an adult to ham radio? When was the last time you taught a code class at a high school? Your comments make us think you are self serving. Not concerned for the future. Instead of sitting at your keyboard and whining, get up and teach a class on CW, get involved. It is a fact, the code requirement is one of the major reasons many sway away from ham radio. Get busy teaching or roll over on the subject of CW.

Kenwood is very wise and there MUST be a die hard ham in charge. It would mean more money for Kenwood to just "can" Amateur Radio all together and petition the FCC to take away our frequencies so they could sell millions of commercial radios to the potential users of our valuable frequencies.

I not only work with kids, including taking part in the Scouts JOA, I also am very active in RACES/ARES/SKYWARN a the local club. Only if we continue to prove our value are we going to continue to keep our frequencies. I am part owner in two repeaters and full owner in

another. All three are open full time. I have all three here at my
home. I pay for the electricity to run them and maintain them at no
cost to others. I am also a lifetime member of the ARRL. I try to
bring at least one person into ham radio each year. How much personal
time or money have you spent to keep ham radio active?

Sorry for the post to the group, I know this is not the group for
this discussion. BUT since he posted this on the group I figured a
response to the group warranted. Does "dxopr@gtel.net" have a call
sign?

Let the flames begin!! I love a good discussion!!

Shanon KA8SPW

Now quick, go look up my call sign, see how long I have been a ham, how
old I am and what class of license I hold!!! QUICK, QUICK, GO, GO!!!

Your grammar and spelling are terrible. I've listened to the IC746 and it
"maybe" better than the Ten Tec, but they have the crappiest sounding audio
I've heard in some of the late model radios.

Another plus to purchasing a Ten Tec vs. a Jap radio is the fact that Ten
Tec will support the radio about 100 times longer than any of the "Big
Three" ever will.
Hell, you can't even buy some of the boards in TS690 anymore. That's
ridiculous for a radio that's less than 10 years old.

Can someone tell me where to purchase the modular plug for the memory back up of the TR-7730? Or at least draw a small picture of the pins. I would guess the back up is a 12vdc separate source which consumes little power. The back up goes into use when the power is removed from the unit so that any memory settings don't get lost. Any help would be appreciated. The service schematic is rather vague on how it is wired.
Thanks.
72,

Bob WR2S

Neither ...rec.radio.swap.....OR.....alt.ham-radio.marketplace.....are
discussion groups...please leave them out of your "drop in the bucket"
complaining... thanks...Murray K5MDM and PS...neither is QTH.COM a
discussion group..... OH Yeah, and so what if you took the code test
at 13WPM....get used to it, there are plenty of 5 WPM general and extra
class hams, how have every right to be here.

> Remember Pearl Harbor .... 73 JJ

Hmmm...I'd venture to say that the computer & monitor you're using are
not built in the U.S.A. -- prolly made in Asia somewhere. How about
that TV in your front room, or the AM/FM radio on your nightstand --
neither are built in the U.S.A -- so please don't pontificate about
"remembering" Pearl Harbour, etc...

Thanks for listening...
